LETTER OF TRANSMITTAL

Baton Rouge, Louisiana.

February 6, 1937

*Governor Richard W. Leche, State Board of Education,
Members of the Legislature.*

Gentlemen:

Complying with the provisions of Act 100 of 1922, I respectfully submit herewith the Eighty-Seventh Annual Report of the State Department of Education covering the session 1935-36. The Report presents the essential facts concerning the State Department of Education, the several parish school systems, and the public and private higher institutions of learning.

Reference to the table of contents will indicate a rather complete statistical treatment of the various phases of public education throughout the State. The tables supply accurate information arranged by parishes and institutions and classified according to essential educational facts. The data show: (1) Public funds received and expended for educational purposes; (2) the distribution and classification of payments according to function; (3) the apportionment of the State Equalization Fund; (4) pupil registration and attendance; (5) the number and cost of new buildings; (6) the number, qualifications, experience, and tenure of teachers employed; (7) data on the transportation of children to school; (8) the average cost per pupil registered and per pupil of average daily attendance based upon payments for current operation; (9) the essential facts concerning State-approved high schools; (10) the certification of teachers; (11) information concerning special departments organized in the schools; such as agriculture, home economics, vocational training, music, physical education, and school libraries; (12) the number and cost of State-owned (free)

textbooks distributed during the year; (13) the quantity and cost of free school supplies distributed; and (14) essential data on public and private higher institutions of learning. Our purpose has been to secure and present in proper form the essential facts concerning the public-school system. This is done not only for the purpose of reporting to you and the general public but for the additional purpose of setting forth a current historical record of education in the State. It is important that such records be accurately kept and reported in readily accessible form.

Evidences of advancement and desirable change are to be found in many of the tables. They show increases in the number of children registered; greater holding power of the schools; growth in the teaching staff; larger numbers of children transported to consolidated schools; expansion in the fields of vocational training, physical education, music, health service, and school libraries; and continued additions to the facilities for educating negro children.

Support for the common schools from State sources for the purpose of meeting the cost of current operation continues to increase. The annual apportionment to the parishes from the State Public School Fund and minor sources in the past several years is presented to show the shift in emphasis from local parish over to State support.

Support for Current Operation

Year	State	Parish
1931-32	\$4,709,350	\$10,923,564
1932-33	4,767,975	9,044,465
1933-34	6,490,182	9,872,676
1934-35	8,235,319	9,299,904
1935-36	9,190,327	8,780,536
1936-37 (Estimated)	9,750,000	

It will be observed that in the year 1931 the parishes were raising locally the greater part of the money required to pay the ordinary operating expenses of the schools. The intervening years have witnessed a steady decline in the local funds from approximately eleven millions to eight and

three-quarter millions of dollars whereas the support from State sources has increased steadily from four and three-quarter millions to an estimated nine and three-quarter millions of dollars in 1936-37. This shift from local to greater State support is no doubt the most significant administrative change that has been made in our public schools in recent years. It is sound and desirable because the State is the ultimate authority in public-school matters and should assume the greater part of the responsibility for providing school facilities for all children regardless of their place of residence in the State.

Even though the gains in school support from State sources have been large and notable they have been offset in considerable part by losses in local parish revenue. There is urgent need for a continued increase in support from State sources in order to provide more adequate salaries for teachers, full length terms, rapidly growing high schools, increasing demands for transporting children to school, additional curricula offerings, and larger teaching staffs in many of the parishes. We have made many important advances within the past few years but the fact remains that our needs are still pressing and it should be our desire and intention to extend our facilities as needed so that in due time the public-school system will be brought up and placed abreast with the best in the Nation. If the State can continue the present upward trend in support the goal toward which we are working can be realized within a few years.

Special attention is directed to brief comments in the descriptive part of the Report on important changes and additions to our school laws made by the Legislature at its Regular Session in 1936. The Governor and the members of the Legislature are to be commended for their favorable and generous attitude toward the public schools. Laws were passed providing for teacher tenure; a teachers' retirement system was set up; an annual appropriation of two hundred thousand dollars was provided for the purpose of aiding in the establishment and upbuilding of libraries in all of the schools of the State; the Budget Law was amended returning to parish school boards initial authority in the employ-

ment of teachers but reserving to the State the right of oversight and control of school board budgets sufficient to insure the safe and wise expenditure of funds apportioned to the parishes for the operation of their schools; liberal increases were provided in the appropriations for the State's higher institutions of learning under control of the State Board of Education. I am sure that the thousands of teachers employed in the schools, the various school officials, members of parish school boards, and the general public are duly appreciative of the enactment of these and other laws passed for the benefit of the school system.

Governor Leche's Administration, though in office only a year, is characterized by a number of advanced positions with reference to the development of public education and, among them, we may enumerate, in addition to the increased State funds for the support of the public schools, a retirement system for teachers, tenure for teachers, and other measures already mentioned in this report.

The appreciable expansion of the system of agricultural education for boys living in country communities and the beginning of a system of trade education for young men and adults living in the larger towns and cities of the State. The addition of \$87,000.00 of State funds to the money realized from Federal sources for the support of departments of Agriculture, Home Economics, Trades and Industries, has enabled the Department of Education to establish a large number of additional agricultural schools in numerous parishes, bringing the number of agricultural departments in the State for white country boys up to 125* and of negro departments to 61**. The same State appropriation enables the State Board of Education to support additional departments of Home Economics, and to aid substantially the Delgado Trade School in New Orleans, the Nicholls Trade School in New Orleans, the Sullivan Memorial Trade School at Bogalusa, and the Shreveport Trade

* Of this number 32 new departments have been established this session.

** Of this number 4 new departments have been established this session.

School at Shreveport, and, besides, to establish trade school centers in charge of well-trained and efficient teachers, one for each, at Monroe, Gretna, Shreveport, Alexandria, and Baton Rouge. The purpose of these trade centers of instruction is to provide suitable schooling for young men and adults who are employed in gainful occupations but need additional instruction, of which they are not in position to avail themselves in any of the trade schools in the various parts of the State.

I trust that these policies of the present Administration may be continued and expanded to the point of making scientific and practical agricultural instruction available to all country boys of sufficient age and advancement in all parts of Louisiana and sound courses in trade education available to all young men in the larger centers desiring to equip themselves to earn a livelihood in a useful trade and to such adults employed in gainful occupations who wish to advance their knowledge or to equip themselves for a different trade. To this end, the \$87,000.00 appropriated by the Legislature of 1937 to match Federal funds to aid Agriculture, Home Economics, Trades and Industries, etc., should be increased or, at the least, maintained by future legislation and at least one or two additional trade schools should be established by the Legislature at each of its meetings for the next dozen years or so, that is, until a trade school has been established in each of the large towns of the State.

The present Administration is also to be commended upon its policy of developing the minor colleges of the State. Substantial improvements in buildings and equipment have already been provided for the Louisiana Normal College and the Louisiana Polytechnic Institute at a cost of approximately One Million Dollars, and an improvement program will soon be under way at the Southeastern College at Hammond. The four minor colleges for white youth, namely, the Louisiana State Normal College, the Louisiana Polytechnic Institute, the Southwestern Louisiana Institute, and the Southeastern Louisiana College are instructing approximately 4,000 college students and the two negro colleges

—Southern University and the Louisiana Negro Normal and Industrial School—some 1,500 to 2,000 students.

At least Four or Five Million Dollars is urgently required to provide the physical equipment needed by these six institutions and an increase in the maintenance funds of all of these colleges is necessary to take care of the enrollment which naturally grows larger from year to year. The schools for the deaf and blind of both races also require improvements.

When the Administration's policy of providing for the needs, physical and otherwise, of these minor institutions and its program of expansion of the State University are realized, it can be confidently stated that few, if any, states in the Nation perhaps will be doing a better part by its people in providing instruction on the college level than Louisiana.

May I say in conclusion that the prospects for continued educational growth in Louisiana are brighter than they have ever been in any period of the State's history. Our State and parish organizations are executing their educational functions properly; our plan for financing is sound and equitable; the teaching personnel and the supervisory officers rank high in both educational and professional training; public opinion is generous in its support of the school system; and the State Administration is in sympathy with the efforts we are making to improve the schools. With these favorable conditions and with continued growth in financial support from State and local sources there is every reason to believe that the schools will continue to grow and serve the children better from year to year. I trust that you will find the report a complete and trustworthy record of our school system for the current session.

Respectfully submitted,

T. H. HARRIS,
State Superintendent.

SCHOOL LEGISLATION OF THE 1936 REGULAR SESSION

The Legislature of 1936 goes into history with a record of achievement that commends it to the public schools of the State in no uncertain terms. The value of the legislation to the school system and especially to the teachers is already recognized; but careful weighing of the various acts and scrutiny of their ultimate significance seem to warrant the belief that, when all of the little controversial points and misunderstood phases of these acts are ironed out, the practical working of the product of the legislative action will add continually and bountifully to the esteem in which the new laws will be held.

Act 59 removing the teacher from the fear of centralized political control and Act 58 placing the teacher under *Tenure* with freedom from fear of local political control combine to form a bulwark of safety for the teacher. Act 83 making provision for retirement of aged teachers on a decent living income will render equal if not greater service in promoting the feeling of security on the part of workers in the educational field. With the passage of time and a fuller realization of the meaning of these epoch-making acts, it is reasonable to look for growing respect for the solid wisdom that brought forth these laws.

Acts 89 and 153 increasing the free-textbook funds and including free pencils and paper for the children, and free library books for the schools, with careful administration, should contribute effective aid to local schools in putting into the hands of the children the basic essentials needed to make the work of the teacher successful.

With largely increased appropriations for educational purposes and the State supplying greatly increased public

school funds, it is reasonable to be optimistic over the outlook for the schools.

Many new laws contribute evidence of the solicitude with which a favorable Legislature has considered the needs of Education. Several of the more significant laws seem to justify comment as follows:

ACT No. 58.

House Bill No. 102.

By Mr. Riddle.

Provides a system of teacher tenure with the following principal features: (1) Probationary period of three years during which dismissal may be made only upon written recommendation accompanied by valid reasons therefor of the parish school superintendent. (2) The parish school board shall give written notice to any teacher found unsatisfactory at end of probationary period that he has been discharged or dismissed, and in the absence of such notice such probationary teacher shall automatically become a regular and permanent teacher. (3) All teachers who have already served satisfactorily for more than three consecutive years shall be declared as regular and permanent teachers. (4) No permanent teacher shall be removed except upon written and signed charges of wilful neglect of duty, or of incompetency, or dishonesty, and then only if found guilty after a hearing by the school board, which hearing may be public or private at the option of the teacher. Said teacher shall be furnished, at least 15 days in advance of hearing, a copy of the written charges against him, and to have the assistance of a counsel. Teacher has right to appeal to the court of appropriate jurisdiction.

ACT No. 83.

House Bill No. 127.

By Messrs. Frazar and Riddle.

Provides a State retirement system for aged and incapacitated teachers. Membership in the State retirement system is compulsory for all new teachers except those who enter a retirement system of a city or parish; optional with teachers already in service. Under the terms of the State

system retirement is optional at 60 years of age, and compulsory at 70, unless retained for not more than two years on the approval of the Retirement Board of Trustees.

Upon retirement a teacher shall receive: (a) An annuity—actuarial equivalent of accumulated contributions. (b) A pension equal to annuity allowable at 60 years of age. (c) If teacher has prior service certificate in effect he shall receive an additional pension equal to annuity which would have been provided at age of 60 “by twice the contributions which he would have made during prior service had the system been in operation and he contributed thereunder.” Provision is made for disability retirement after 10 years’ service, which shall consist of an annuity plus a pension equal to 75 per cent of the pension that would have been payable upon retirement at 60 years of age.

Teacher’s contributions shall be deducted by his employer, and the amount to be deducted and contributed by each employer shall be “such percentage of the total compensations or salaries of all teachers in his employ as the aggregate amount of the normal and accrued liability contributions and Expense Fund contributions for the year shall bear to the total compensation or salaries of all teachers or all employers.” The administration of the system is vested in a State Retirement Board of Trustees consisting of 7 members: State Superintendent of Public Instruction, Secretary of State, State Treasurer, and Secretary of State Teachers’ Association, ex officio, and 3 teachers, one a parish superintendent, one a principal, and one a classroom teacher, who shall be elected by members of the retirement system for three-year terms.

ACT No. 155.

House Bill No. 335.

By Messrs. Alexander, Jolley,
Chandler, Simpson, and
Beckom.

Provides that all textbooks furnished free to pupils shall, whenever possible, be printed and bound within the State by bona fide residents under contracts let by the State

Printing Board. Made it the duty of the State Board of Education to select and adopt for a minimum period of four years such books for which the authors, publishers or owners of copyrights shall agree to grant to the State publishing rights or the leasing of plates for State printing thereof. In case the State Board of Education is unable to acquire publishing rights to suitable textbooks it is directed to have textbooks written and compiled on its own initiative. This new law provides that pupils are to receive at public expense not only textbooks but also school supplies, including library books, paper, pens, ink, pencils, etc., which shall be paid for out of the Severance Tax Fund. The Act also provides that the State Printing Board shall determine the mode of procedure, form and announcement of bids, and any and all other matters and details in connection with contracts they are to make for the purchase of textbooks, library books, and school supplies. The Printing Board, however, shall have no authority to contract for any textbook which has not been selected and adopted by the State Board of Education. The State Board of Education is required to file with the State Printing Board written requisitions for all textbooks, library books, and school supplies to be furnished at public expense to the school children of the State.

ACT No. 192.

House Bill No. 204.

By Mr. Drake.

Amends Section 29 of Act No. 100 of 1922 by providing that parish school boards shall have authority to transport children living more than one mile from a school of suitable grade approved by the State Board of Education.

ACT No. 287.

House Bill No. 529.

By Mr. Anderson.

Authorizes and directs the State University and Agricultural and Mechanical College to give annually, to each senator and representative a scholarship in the academic department for a student to be named by each said senator

and representative from among the bona fide citizens in his district. Such scholarships shall continue until each student so named has graduated from the academic department unless his scholarship has ceased for other reasons.

ACT No. 207.

House Bill No. 261.

By Mr. Cunningham.

Authorizes the parishes and municipalities (Orleans excepted) to appropriate and pledge not more than 2 mills for a period not exceeding 25 years for the payment of any indebtedness, exclusive of bonded indebtedness, of parish school boards and municipal corporations which may have been incurred prior to July 1, 1936.

ACT No. 344.

House Concurrent Resolution No. 18.

By Mr. Starnes.

Designates the first Wednesday in May as Huey P. Long Educational Memorial Day in all public schools, and provides that every school be furnished at public expense with a wall photograph of the late senator and copies of a poem extolling his virtues, which is prescribed in official song for the ceremonies. Memorial Educational ceremonies are to be under the supervision of the State Department of Education.

ACT No. 190.

House Bill No. 198.

By Mr. Chandler.

Authorizes that whenever there shall be a sudden increase in the population of a portion of a previously created school district ("by reason of industrial or oil development") the Parish School Board with the approval of the "State Bond and Tax Board" may create a school sub-district in which bond issues and special taxes may be voted.

ACT No. 160.

Printed Bill No. 75.

By Mr. Clements.

Authorizes parish school boards to grant mineral leases upon any lands owned by such parish school boards.

ACT No. 59.

House Bill No. 26.

By Mr. Bordelon.

Amends and re-enacts Sections 20 and 27 of Act 100 of 1922 by providing that the parish school board shall determine the number of schools, their location, and the number of teachers to be employed. It further provides that the selection of teachers shall be made from nominations submitted by the parish superintendents provided the majority of the full membership of the Board may elect teachers without nomination of the superintendent. The board shall have power to employ teachers by the month or by the year, and to fix salaries without discrimination as to sex.

Section 27 is amended so as to make it the duty of the various parish school boards to adopt not later than the first Tuesday in the month of August a budget of the expected revenues and expenditures for the ensuing year on such forms and in such manner and subsequence as shall be prescribed by the State Budget Committee. School boards are required to submit their budgets to the State Budget Committee composed of the Governor, State Superintendent of Public Education, and State Treasurer not later than August first of each year for review, examination, and approval; said Committee shall have authority over the budgets of parish school boards and may at any time an emergency arises revise or amend in whole or in part the budget of any parish school board.

ACT No. 89.

Senate Bill No. 49. By Messrs. Lindsey and Peltier.

This joint resolution amends the second paragraph of Section 14 of Article 12 of the Constitution so as to provide for free school books and school supplies for the school children of the State and provides that the revenues from the State severance tax shall be used first to meet certain fixed appropriations provided for by the Constitution; and next to pay the cost of free textbooks, free school supplies, and library books. After sufficient funds have been ac-

cumulated for the payment of these charges then the State Treasurer shall transfer the residue to the State Public School Fund for apportionment to parish school boards as elsewhere provided in the Constitution.

The amendment was approved by the electorate at the Regular Election in November. The effect of this amendment is to write the free textbook law passed in 1928 into the Constitution thus making the legislative act relatively permanent.

ACT No. 301.

House Bill No. 621.

By Mr. Bradford.

Authorizes parish school boards to call special tax elections, parish wide or by district, for the purpose of providing funds to be applied to existing unfunded debts arising out of current operating expenses; to issue negotiable bonds based thereon; and to validate any tax voted under the authority of paragraph 9, Section 15, of Article 12 of the Constitution. The tax rate is limited to three mills, the period of time must not exceed ten years, the proceeds shall be kept separate and apart from all other funds and shall be used exclusively for the purpose voted. Any bonds issued as a result of such election should bear a rate of interest not exceeding six per cent per annum and shall be sold for not less than par.

ACT No. 265.

House Bill No. 428.

By Messrs. Alexander, Simpson, Chandler, and Jolley.

Creates the Shreveport Trade School for the purpose of offering vocational training to the white youths and adults in Shreveport and Caddo Parish under the administration, control, and supervision of the State Board of Education. The Act authorizes the State Board of Education to accept from the Caddo Parish School Board the property commonly known as the Hope Street High School located in the City of Shreveport and provides for the building, equipment, and maintenance of said Institution after its establishment.

ACT No. 5.

House Bill No. 301.

By Mr. Ethridge.

This item in the General Appropriation bill provides \$87,000 per annum for the purpose of supplementing certain Federal funds received for use in paying the salaries of teachers of agriculture, trades, home economics and other vocational courses.

THE STATE DEPARTMENT OF EDUCATION

Descriptive Statements by the Educational Divisions

The heads of the several educational Divisions of the State Department of Education submitted the statements which follow for inclusion in the descriptive part of the Annual Report. These descriptive and narrative statements are particularly timely because the current session has witnessed the inauguration of several important educational movements and the continued expansion of others began in former years. Among the more significant are (1) the State-wide organization for curriculum revision; (2) the further emphasis on classroom supervision and the employment of additional parish supervisors; (3) rapid growth in the recently added programs for music and health; (4) further increases in the standards required for the certification of teachers; (5) continued growth in the vocational fields of home economics, agriculture, commerce, and manual arts; (6) expansion of the school library program, more particularly the annual legislative appropriation of two hundred thousand dollars; (7) the organization of a well-balanced educational program for adult education and nursery schools for pre-school children; (8) the recent addition of auditing service to check school board budgets and (9) continued expansion of high-school curricula offerings and further extension of secondary facilities in every parish. The statements submitted by the several field Divisions present a cross-section of the numerous administrative, financial, and supervisory functions performed by the Department and constitute a historical record of many important movements which influence public education.

CERTIFICATION OF TEACHERS

J. E. LOMBARD

The rapid increase in the number of fully qualified teachers resulting in a supply much in excess of the demand has brought about during the past twelve months several vital changes in the fundamental regulations governing the issuing of certificates.

On April 4, 1936, the State Board of Education passed regulations setting up an approved three-year teacher-training course designed to prepare elementary-grade teachers. This course is the requirement for a Class III-A, professional-elementary certificate. This regulation will go into effect on September 1, 1937.

By regulations adopted at the same meeting, the requirement for the professional-elementary certificate was set at four-year baccalaureate degree from an approved college to go into effect September 1, 1940.

Paralleling these upward trends in the scholastic requirements for new certificates has developed an energetic cooperative effort to put teachers into service for which they have been prepared. Every new certificate is issued with the character of service severely limited to work for which the applicant has been specifically prepared.

Every year the lists of teachers in the several parishes are checked to determine whether or not the service and preparation agree. Where such agreement does not show on the office records, a cooperative effort is undertaken to arrange the service so that it will be in accord with the preparation and previous experience and to make this accord show on the office records. In the long run, the operation of this plan should prove to be a valuable help in promoting the efficiency of the teaching corps.

More training and better pointed training for our teachers and more care in placement are the major aims of the Division of Teacher-Training and Certification.

THE ELEMENTARY DIVISION

A. M. HOPPER

The Elementary Division of the State Department of Education works primarily with the elementary schools. It renders service in three major capacities; (1) as an administrative unit, (2) as a coordinating agency, and (3) as a service organization.

The Elementary Division was established in 1908 and for six years consisted of a supervisor and a secretary. In 1914 two additional supervisors were employed. Since that time, with the exception of a few years when a member was engaged in study or working temporarily with another division, its membership has remained constant. For fifteen years, from 1914 to 1929, the General Education Board of New York paid the salary and the traveling expenses of the head of the division.

While the division has three members only, it works with all the white elementary schools in the State and with the elementary departments of the high schools. Some conception of the extent of the field in which the Elementary Division operates can be formed by taking note of certain significant figures. The latest available figures on public schools of Louisiana show that there are 1,180 white schools with a total enrollment of 296,101. These schools employ 9,563 teachers. Of the 1,180 white schools in the State, 1,152 are elementary schools or have elementary departments. These schools and departments have a total of 226,999 pupils and a force of 6,688 teachers.

The number of teachers engaged in elementary education makes it impossible for the members of the Elementary Division to render much direct assistance to the individual teacher. The division has, therefore, adopted the policy of working through the local officials rather than with teachers. In practice, the division works primarily with the highest local officials who assist the teachers. This is

usually the parish superintendent or supervisor, although in numerous cases it is found desirable to work with the school principals or with groups of teachers. The work with the individual teacher is done primarily to assist local officials in their supervisory activities.

The elementary school is the foundation upon which the educational structure of the State is built. Its primary purpose is to give the child those habits, skills, understandings, attitudes, and appreciations that are deemed essential for all citizens. It also lays the foundation upon which all future education must be based. It is the universal school and as such is attended by all the pupils of the State. For many of them, it furnishes all the education that they will receive. The necessity for a strong system of elementary schools is, therefore, evident.

In its administrative capacity, it is the function of the Elementary Division to administer the school laws of the State of Louisiana and the regulations of the State Board of Education which deal with education generally—especially those applicable to the elementary school. Working in cooperation with other State and parish educational administrative units, it prescribes standards for elementary schools. It inspects all schools that apply for approval, and through visits and reports ascertains that all schools on the approved list meet the standards prescribed. The purpose of the approved school is to set up such requirements as will make satisfactory work possible and probable in all schools that meet its standards. The approved elementary school was established by a regulation of the State Board of Education in 1928. The first elementary schools were approved during the session of 1929-30. Since that time the number of approved schools has increased annually until at the present time the number of public approved elementary schools is 659 and the number of private approved elementary schools is 35, making a total of 694.

In cooperation with the Division of Certification, the Elementary Division checks the professional training of teachers in elementary positions to assure the best type of

service to the children of the State. In its administrative capacity, the Elementary Division also administers the educational policies, which have been developed over a period of years, for the promotion of an effective system of elementary schools. Many of these policies are involved in the standards prescribed for approved elementary schools. These standards promote satisfactory conditions for the health of teachers and pupils and maximal conditions for recreation, teaching, and learning.

As a coordinating agency, the Elementary Division attempts to coordinate on a State-wide basis the efforts of all educational agencies dealing with elementary education. Through contacts and consultations the work of teacher-training institutions is coordinated with the work of the teachers in the class rooms of the State, and the work of the elementary school is, to a reasonable degree, coordinated with the work of the secondary school. While no attempt is made to prescribe the work of individual teachers or schools, it is advantageous to coordinate the work of the various systems so as to enable the children who move from one unit to another to do so with the least friction and with a minimum loss in achievement. The work of all agencies engaged in education must be coordinated if the best results are to be secured. The activities of the Parish Health Unit, the County Agent, Boy Scouts, and literary clubs contribute to the development of the pupil and should be coordinated so as to prevent duplication and friction. The present curriculum-study program has as one of its aims a better utilization and coordination of all educational effort. The Elementary Division serves as a clearing house for the exchange of educational ideas. Its aim is to coordinate all productive effort to the end that every child in the State will at least realize a minimum but complete elementary education.

As a service agency, the Elementary Division conceives it a primary and major function to render the widest service possible to the elementary children and teachers of the State. A large percentage of the children receive their only educational experience in the elementary grades of the

State school system. As a service organization, the Elementary Division works cooperatively with superintendents, supervisors, principals, and teachers to improve the teaching and learning activities of the classroom. This service may be designated as "supervision." Supervision is a cooperative endeavor among all those engaged in school work to advance the welfare of the child. The purpose of supervision is to improve instruction and to provide better teaching conditions. It involves classroom visitation, consultation with teachers, demonstration teaching, conferences, group meetings, faculty meetings, and other activities.

During the session 1935-36, the State Board of Education included supervision as one of the standard features of the school system and provided for supervisors in all parishes participating in the State Equalization Fund. As a result, the number of parish supervisors in the State has been materially increased. During the session of 1934-35, only fifteen supervisors were employed in thirteen parishes. At the present time, there are fifty-five supervisors employed in forty-six parishes and two city school systems. It is the practice of the Elementary Division to work as far as practicable through local supervisors to render an effective type of classroom supervisory service.

In its capacity as a service organization, the Elementary Division has initiated several study programs of the curriculum and teaching procedures. Courses of study have been developed cooperatively with groups of teachers and school officials. The present curriculum program is an example of the type of service the Elementary Division, as a unit of the State Department of Education, attempts to render to the schools of the State. It renders service also in recommending books for adoption and in selecting library books and other teaching materials. It is called upon continuously in a supervisory capacity to make recommendations dealing with elementary school problems.

PROGRAM OF CURRICULUM DEVELOPMENT

M. P. ROGERS

The whole educational corps of Louisiana is engaged in a comprehensive program of curriculum improvement. All school units in the State; including the sixty-four parishes, three city systems, and four State colleges are organized and actively engaged in this work. The program had its inception in the growing conviction that our curriculum can be improved to make it much more functional in the lives of the students who attend our schools. For a number of years, there have been individual efforts in this direction; but, as an organized effort, the program had its beginning in the work of about fifty selected school people of the State who met during the summer of 1936 in a curriculum-study group at Louisiana State University.

The plan outlined by this group for the first year's work has four outstanding characteristics. In the first place, it is carefully planned; secondly, it is a pioneering movement in Louisiana; thirdly, it is a study program; and finally, it is designed to include the voluntary participation of every teacher in the State.

In this, the beginning year, the purpose of the program is to develop among the whole teaching force a clearer understanding of:

1. The basic philosophy and guiding principles of education.
2. The aims of education.
3. Pupil needs, purposes, and interests.
4. The nature and scope of the curriculum.
5. The function of subject matter and teaching procedures in the curriculum.

In succeeding years, it is expected that the program will be continued to include the preparation of new teaching materials, the planning of new teaching techniques, and, eventually, the preparation of tentative teachers' guides.

It is generally recognized that the curriculum is one of the most important factors in the educative process. The educative materials presented to the child condition to a high degree his whole life development. If the schools are to render a service commensurate with the generous support the citizens of the State have given the schools, every possible effort must be made to keep the curriculum adapted to situations in which social and industrial changes are occurring more rapidly than ever before in the history of the world. Teachers are fully cognizant of this necessity. There seems to be a general conviction, however, that change in the course of study has lagged behind community development. This conviction is undoubtedly responsible for the fact that teachers have received the present program of curriculum improvement as one of the most promising movements in the development of the school system. Certainly, they are participating actively in the program and are looking forward to a time when they will enjoy freedom to use greater individual initiative to make the curriculum more functional in the lives of their particular students. The program will serve as a source of new enthusiasms for the whole teaching corps and will soon make its influence felt in every classroom in Louisiana.

As teachers redefine educational aims, evaluate old and new materials, and try out new procedures, it will become difficult for them to remain satisfied with stereotyped teaching patterns and with the limited teaching materials found in textbooks. There will be a growing tendency to consider the child rather than the subject being taught as the center of the educational process. New aims will guide school activities, new materials will be collected and organized, and new procedures will be tested. New ideas and new materials will be passed on to larger groups and tested and refined until educational outcomes in the future will be far superior to those now obtained in our schools. We will witness the development of a dynamic curriculum; one that will develop an understanding of world resources, movements, and problems but that will emphasize the vital aspects of local situations and that will relate all experiences

to the lives of the pupils. The new curriculum will provide information but will stress appreciation, good habits, right attitudes, and understandings that are based on open-minded study. Because of this probability, the teachers and patrons of the schools will surely come to consider this program one of the most important movements towards educational development in Louisiana.

HIGH SCHOOLS*

JNO. E. COXE

The progress of Louisiana's High Schools continues on a substantial and gratifying plane. They have maintained their former standards while, at the same time, adding new marks of achievement to their impressive record. Some of these marks of improvement may be enumerated as follows:

1. *Qualifications of Teachers.* The standards of training of the high-school teachers of Louisiana have been gradually advancing for many years. It is a source of gratification to note that, at present, 98.2% of the teachers in our senior high schools are college graduates and hold the baccalaureate degree, while 13.3% of them possess the master's degree.

2. *Requirements for Graduation.* Several forward steps have been recently taken in regard to the requirements for graduation from State-approved high schools. These changes were motivated by the desire to make the requirements so liberal and so flexible that all high schools might observe them and, at the same time, meet the individual needs of the students. The chief changes made are:

(a) Whereas the former regulation required a student to offer four units in English for graduation, the new standards require but three, although all students must pursue the study of English in all four years of high-school work. This change does not reduce the emphasis properly placed on English, but serves the purpose of flexibility.

(b) Whereas formerly American History was specified as one of the two required units in social studies, at present, a student may offer for graduation any two units in the

social studies. It is believed that some of the other social studies are of as much value in building citizenship as is American History.

(c) Formerly, students were required to have credit for one unit in Algebra in order to graduate. Now, they may submit one unit in either Arithmetic, General Mathematics, or Algebra. This provision enables some schools which do not desire to offer Algebra to continue to conform to the standards.

(d) Heretofore, it was necessary for students to present credit in either General Science or Biology. The present requirements permit the students to offer one unit's credit in any science. It is probable that either Chemistry or Physics is as valuable to a student as General Science or Biology.

(e) The new standards require that all students must earn one-fourth of a unit each year in Health and Physical Education. Beginning with the session 1938-39, all candidates for graduation must offer one unit in Health and Physical Education. This new requirement is the outgrowth of the increasing importance of Health Training in modern life.

3. *Junior High Schools.* The program of studies and curricular prescriptions for the junior high schools have been rearranged to articulate with those of the senior high schools, so that students may advance from the former to the latter without suffering inconvenience.

4. *Curriculum-Study Program.* All divisions of the State Department of Education have cooperated in sponsoring a state-wide curriculum-study program for all the teachers of the State. In this study program, an attempt is being made to determine whether or not our curriculum is what it should be; and, if not, what changes should be made. At the same time efforts are being made to clearly define the aims of education, to improve the quality of integration practiced, to increase the use of local curriculum materials, and to improve cooperation with homes and other educational agencies.

*Statement and tables prepared by John B. Robson, Assistant High-School Supervisor.

5. *Comparative Statistics.* One of the clearest methods of conveying understanding is by the objective use of figures. Table — has been prepared with this thought in mind. Some of the matters of note, as depicted by this table might be listed as follows:

TABLE I

COMPARATIVE STATISTICS FOR STATE-APPROVED HIGH SCHOOLS

Session	1909-10	1914-15	1919-20	1924-25	1929-30	1935-36
WHITE, PUBLIC:

Number graduates.....				51	83	104

¹ Including principals.

² Includes sixty-three part-time teachers.

³ These are graduates of session 1934-35.

⁴ Junior high schools were first established in 1917-18.

(a) The number of State-approved senior high schools has increased more than 400 % since Superintendent Harris assumed the direction of the schools of the State.

(b) In the same period, the number of secondary teachers employed has increased 937 %.

(c) The number of students registered has increased 1180 %.

(d) The most impressive gain made by the high schools in that period is the 1530 % increase in the number of graduates.

(e) It is gratifying to note the general elevation of standards on which the high schools are operating as is shown by the more than 100 % increase in the number accredited by the Southern Association of Colleges and Secondary Schools within the past ten years.

(f) It is worthy of note that the number of junior high schools has remained practically constant since their organization.

(g) It is interesting to note the increasing number of private high schools that are raising their standards to meet those of the State Department of Education and thus receiving State-approval.

(h) Another point of interest is the gradual growth of secondary education for negroes.

6. *Libraries.* One of the most important developments in the high schools is the almost state-wide improvement being made in their library facilities and the increasing employment of trained librarians. The fruition of the State's project to furnish free library books to the high schools will accelerate this growth and promote the possibilities of developing our youth into self-reliant, independent citizens.

HOME ECONOMICS

CLYDE MOBLEY

Evidences secured through observation and conferences, and facts obtained from compiling annual reports from 276 home-economics teachers reveal noteworthy developments in many schools, and wholesome progress in every phase of the homemaking program. A study of state supervisory reports for the school year shows that 222 of 276 home-economics departments were visited. The expansion of supervisory activities, increasing cooperative activities with educational and social-service organizations, and the large number of home-economics departments bring each year an increase in the number receiving no supervision from the Home-Economics Division. Return visits were made to 16 departments for the purpose of guiding specific problems undertaken during the first visit. All visits were made for the purpose of observing instruction and learning situations, and for conferring with school officials and teachers about problems related to home economics.

An important part of the supervisory program includes one-day conferences in twenty centers, where 10 to 25 teachers met with one of the supervisors to discuss pertinent problems and make tentative plans for the year's work. Through this activity for training teachers in service, the supervisors usually meet all of the 350 teachers during the first three months of the school year.

It is apparent that the improvement in school finances and the consequent payment of regular salaries for nine months have contributed to a sense of well-being and a better professional attitude on the part of the teachers. There have been evidences among superintendents, principals, and teachers of a better vision and a more cheerful outlook for all phases of the educational program. Home economics has shared in this optimistic spirit, and has made reasonable progress with the program of work for the year.

It is believed that reasonable progress is being made in approved teaching practices. Teachers have manifested more interest in professional growth by participating in conferences, by following approved practices in planning and teaching, by making home and pupil surveys for the purpose of becoming better informed about daily living problems, by making home visits for establishing friendly contacts and guiding home-project work, and by improving technical and professional training through reading and studying in summer school. At present 301 of the 309 teachers have degrees and regular certificates in home economics, leaving only 6 who do not have degrees but hold certificates under former regulations, and two who failed to qualify. Teachers have continued to cooperate with work with all groups engaged in educational and welfare activities. The introduction of a health and physical-education program gave added responsibilities to many teachers already carrying a heavy schedule; however, the additional work has been accepted in a cheerful manner.

The equipment and furnishings in home-economics departments enable teachers to administer first aid and take care of pupils who become ill at school. Principals and other teachers frequently express appreciation of the unusual service given to health and care of the sick by home-economics teachers and pupils in the home-economics departments. The need for social-service activities has not been so great this year; however, class projects and special activities were directed towards helping underprivileged groups in many communities.

Three new departments have been approved, nine have been given tentative approval, pending completion of certain requirements, one cottage built, and some 12 or 15 departments completely renovated through WPA and School Boards or local improvement projects. This activity has greatly improved teaching situations in many schools, and has been instrumental in raising uniformly standards of home economics in departments in several parishes.

Curriculum study and revision have claimed considerable attention of the home-economics group during the past

four or five years. This work was inaugurated in 1932 by holding conferences for one week in connection with the summer-school sessions in the four State colleges approved for training home-economics teachers. After following this plan for three years, fifteen committees were appointed to make surveys, study and evaluate specific units of work, and to formulate objectives and plans for a revised program in keeping with needs and interests of pupils. The result of this long-time project is a tentative course of study for the 7th, 8th, 9th, 10th, and 11th grades, which includes units of work dealing with health and grooming, improving home surroundings, clothing and related art, meal preparation and serving, food and nutrition, care and preservation of food, health, safety and first aid, social-family relationships, child guidance, hospitality, health and home care of the sick, vocational guidance in home economics, and art related to the home. The development of these units and accompanying problems were based on home and community surveys which, with facts and observation secured by teachers, served as guides in determining the needs of the pupils.

One committee of home-economics teachers, high-school principals, and parish superintendents directed special attention to interests and needs of boys in daily living problems. This study brought about a regular credit course with a program for boys which includes everyday manners and courtesies, social-family relationships, food and health, improving home grounds, sharing in earning, spending, and saving the family income, health and grooming, selection and care of clothing and accessories, making homes more comfortable and convenient, health, safety and first aid, and understanding children.

During this past year outcomes have been compiled for every unit in the four years' course by home-economics teachers. This work has been made possible through parish organization of home-economics teachers who hold four to six meetings each year.

Home practice and home projects form a basic part of the homemaking program. Through this medium of learn-

ing experiences, solutions are found for many of the problems arising in home and family living. Likewise, home projects help to develop better attitudes toward daily living problems in the home, and bring about desirable contacts between home and school. Each year brings reports from parents who point out growth and development of girls and contributions to home and family life, which are being made through home practice and home projects. During this past year there were 25,455 projects completed. The topics listed indicate such a wide variety of home problems as, (1) leisure-time activities, establishing home book shelves, reading, following a hobby; (2) home improvements, including renovation of furniture, making furniture and furnishings, flower gardens, convenient kitchens, making clothes closets; (3) food and nutrition, dealing with adequate meals at minimum cost, food preservation, and well-filled home pantries; (4) management in relation to meal preparation, time for doing home work, care of rooms, arrangement of working situations; (5) clothing, including renovation and restyling, construction, laundering; (6) personal improvements involving grooming, suitable clothing, maintaining normal health, personality development; (7) child care and guidance, including the establishment of health habits, clothing habits, the making of suitable clothes, the selection of suitable toys and stories; (8) family relationships, hospitality, recreation, and social activities.

Adult classes in homemaking have been a part of the vocational program in home economics during the past ten years. Reports from the teachers, who have led discussions in both homemaking and parent education, indicate that adult groups more and more regard the home-economics teacher as the person who may be consulted on everyday problems confronting the individual and the home. The crowded schedule of the home-economics teacher leaves no time or energy for organizing and developing this part of the program. However, 22 teachers held a series of special meetings for homemakers, which reached 919 women. The cooperative parent-education program with the Parent-

Teacher Association and the volunteer work of lay leaders have been responsible for 60 study groups reaching about two thousand parents. Three home-economics teachers directed discussion meetings in four centers for P. T. A. The combined homemaking and parent-education program reached approximately three thousand people.

Federal funds for vocational education in home economics through the Smith-Hughes and George-Ellzey Acts provided approximately \$23,712.24 for reimbursing school boards for one-fourth to one-third of the home-economics teachers' salaries in seventy-five home-economics departments. The requirements and guiding principles for these departments have been instrumental in formulating factors for a vitalized homemaking program in all home-economics departments.

Mother-daughter, or sometimes parent-daughter, meetings have assumed a definite place in the home-economics program of work. Some of the valuable contributions of these educational social events include a better understanding between youth and adults, more information about progress of home economics, and a better attitude towards simple, wholesome recreation. Last year there were 410 meetings which were attended by 6,846 mothers.

The Junior Homemakers, an auxiliary organization of the Home Economics Division, under the guidance of Lela A. Tomlinson, Assistant Supervisor of Home Economics, and the home-economics teachers who are advisers for the 211 clubs, have attained national recognition. These clubs are affiliated with both the State and National Home Economics Association, with a total membership of 9,348. Among the achievements listed for this excellent organization in the homemaking program is that of leading the nation with the number of clubs affiliated with the American Home Economics Association during the past five years. The objectives of this organization are to develop efficient leadership and intelligent followership among the girls; to encourage cooperative efforts among the members of the clubs; to develop genuine teamwork and friendship; to develop a professional interest; to provide an opportunity for

girls to combine educational, business, and social interests; to provide for girls an opportunity to experience the responsibility of taking charge of meetings and using good parliamentary procedures; and to encourage organized recreational activities and wholesome social affairs.

The meritorious work of the Junior Homemakers can best be depicted by the large and increasing number of clubs attaining the seven goals that comprise the Standard of Excellence agreed upon by the Junior Homemakers' Committee. The attendance and participation in parish and state meetings, the establishment of scholarship funds for college education in home economics, the leadership qualities manifested by officers and members in conducting meetings, serving on programs and committees, issuing newsletters, and participating in creative contests of a literary nature, all give further evidence of the high type of work that is in progress.

In March 1935, parents, teachers, and school officials joined with the home-economics teachers and pupils in observing the 25th anniversary of the establishment of home economics in the public schools of Louisiana. The state educational journal, *Louisiana Schools*, for February 1935, was devoted to home economics, thus making it possible to give the story of the introduction and development of home economics in public schools and colleges to all teachers and public-school officials throughout the state. Dr. T. H. Harris, State Superintendent of Education, in writing an announcement about the milestone in home-economics education and suitable commemoration events, stated:

"There has been not a little uneasiness among thoughtful people for fear that the automobile, good highways, moving pictures, and other disintegrating influences of lively interest are weakening the ties of home life, with a whole train of evil consequences to orderly and stable society. Therefore, it is but reasonable to conclude that in any scheme of training of the young for satisfactory living in a rapidly changing world, there must be provision for training successful homemakers who can make the home

sufficiently attractive and livable to hold the major interest of the family, and thus serve as an influence to counteract the disintegrating tendencies.

"Those of us who have been interested in the growth of the home-economics program in the public schools of Louisiana have had our attention directed towards several factors in that growth. Little progress would have been possible if those guiding the destinies of home economics had retained the narrow viewpoints involved in cooking and sewing. It was a wise foresight that prompted the home-economics leaders to take the broad outlook that sought to use the training in home economics to develop successful homemakers skilled in the activities that touch home and family life."

This breadth of vision has been accepted by school officials who have given professional and financial support throughout every stage of development. The widespread belief in home economics was well demonstrated during the depression when not one home-economics department was closed. Moreover, the interest in following the idea of a venerable parish school superintendent, John McNeese of Calcasieu, who, in 1910, had the first cottage built for home economics, has played an important part in helping Louisiana to take the lead in providing homelike cottages. At the present time there are 88 home-economics cottages in rural and small-town high schools. City school systems have found it more practical to build apartments and regular laboratory rooms within the high-school building.

There are 342 home-economics departments in secondary and elementary schools with 330 teachers giving homemaking instruction to 32,995 pupils. Approximately 58 per cent of high-school girls are enrolled in home-economics courses.

A compilation of the program of work proposed by many teachers contains 32 objectives. In checking the progress for this year with teachers, reports show that the majority of teachers attained good results in 12 to 20 of

the objectives. Many of the achievements in the State-wide program may be attributed to the careful planning and conscientious effort on the part of teachers who have co-operated with all of the proposed plans in the home-economics and general education programs.

Statistics compiled from 276¹ annual reports give the following information:

Number of pupils enrolled in home economics in high-school departments	19,852
Number of pupils enrolled in home economics in elementary departments.....	13,143
Number of garments made in class.....	36,119
Cost of garments	\$34,500.50
Amount of money raised	7,780.52
Number of meals served by home-economics departments	6,042
Number of home projects completed.....	25,455
Number of girls doing home practice.....	12,956
Number of homes visited	4,738
Number of mother-daughter meetings.....	410
Number of mothers present	6,846
Number of father-son meetings.....	68
Number of fathers present.....	1,955

There was a slight increase in teachers' salaries. The average salary for 1934-35 was \$941.96, and \$953.96 for the current school year.

Operating expenses have been in keeping with existing financial conditions. Pupils continue to bring supplies from home to supplement staple food purchased in many of the schools. A large number of parishes budgeted fifty cents per pupil per month for food and nutrition classes. A compilation of expenditures submitted in the annual reports shows that the average cost of home-economics instruction was \$14.51 per pupil.

During the 25 years which home economics has been a part of the educational program, state and national legislation for general and vocational education, and the wise guidance of State Superintendent T. H. Harris, one of the

¹ Four schools failed to send reports.

Nation's recognized educational leaders, have played an important part in the development of the home-economics program. Regardless of prevailing social and economic conditions, public-school officials and teachers have worked together to secure desirable teaching situations and a program of work that would help pupils with their daily living problems.

The number of high schools offering home economics to more than one-half of the girls enrolled, the introduction of units of especial interest to boys, classes for adults, the long-time curriculum study, and the activities of the Junior Homemakers' organization indicate to some extent the comprehensive statewide homemaking program designed to bring about a better understanding of the many problems in home and family living.

THE PREPARATION OF NEGRO RURAL TEACHERS IN LOUISIANA

A. C. LEWIS

Louisiana is a rural state and the majority of the teachers work in rural areas. This makes it especially important that teacher-education institutions prepare teachers with special attention to the needs of rural life. It is a generally-accepted principle that curricula for the education of teachers should be partly specialized and differentiated according to different types of teaching positions. A review and evaluation of expert opinion and practice as revealed in the literature on the subject seem to justify differentiated curricula for rural teachers.

The Division of the Louisiana State Department of Education charged with the direction of Negro Education believes there is an urgent need in teacher-education for the development of teachers for rural schools. No sound program of education can be developed unless the faculty members of institutions training teachers familiarize themselves with the problems confronting the teachers in the field. In order to meet this need, the program for training teachers for rural schools has been reorganized and redirected in a manner deemed most likely to serve prospective teachers, teachers in service, and the rural population generally. An attempt has been made to provide special adaptations in the curriculum to meet both the advantages and the disadvantages of the rural environment.

The plan contemplates that the rural teacher will survey the assets and needs of the rural community. The information gained from this survey will give the teacher illustrative material in preparing teaching units. The position is accepted that training the child to think in terms of his environment, and helping him to control and improve it, will produce varied educative activities—fuller and richer experiences. So far as possible, both material and social

community resources will be utilized in providing the content of the school curriculum and in guiding the activities of the children.

Important features of the proposed program in teacher education are:

1. *Philosophy.*

Basic philosophy which reflects the most forward looking expression of educational theory current in the Nation and that recognizes the true significance of agrarianism.

2. *Organization.*

The interest and cooperation of all state agencies concerned with education and rural development should be brought into and made effective in the rural teacher-training program. With this idea in mind, all of these agencies have been or will be invited to participate in the rural teacher education program by providing funds, personnel, literature, and guidance. The State Board of Health, the Agriculture Extension Department at the Louisiana State University, the Vocational Agriculture Division of the State Department of Education, and the Home Economics Division of the State Department of Education have already responded to this request and are now participating in the program.

A plan has been developed to coordinate the work of the Normal School faculty, of the Jeanes supervising teachers, and of the teacher-trainers in the six high-school teacher-training centers. This feature will be of special value in the field service program and is a significant departure in school administration and supervision. One year of teacher-training is offered above high-school graduation in six training-school centers, so located as to extend the Rural Normal School services throughout the State.

A Field Service Program is being carried on:

(1) By a faculty commission which represents pedagogy, health, farming and farm crafts, and home economics and which will enable the Normal School to spread its inter-

est and influence beyond the campus by cooperating with Jeanes supervising teachers and teacher-training departments at Southern University and in the six training centers in the field.

(2) By selected faculty members, who offer suitable courses of instruction to groups of teachers in conferences, institutes, and summer schools throughout the state.

By these means it is expected that the inservice and pre-service training of teachers will be tied closer together. The field service will not limit its activities to the trainees or even to school children, but will endeavor to cooperate with local agencies such as those in health, agriculture, home demonstration, and library in adult and community education.

The special teacher-trainers in the six field centers, and the Jeanes supervising teachers of the parishes where the training centers are located and of those parishes where the student-teachers serve their apprenticeship, are considered members of the Normal School faculty. The plan contemplates occasional exchange for periods of a quarter of Normal School resident faculty members with teacher-trainers in the six field centers and with non-resident Jeanes-teacher members of the Normal School faculty.

It is believed that this program will aid teachers in helping the child to think in terms of his environment, will help him to control and improve rural conditions, and will produce varied activities and richer experiences for him. Furthermore, through this means the work of the school will be directly related to adult education and to community improvement in general.

3. *Curriculum.*

The curriculum should be based on current rural conditions and should be adapted to and be responsive to the needs of teachers who work, or are to work, in rural communities. An attempt is made to organize all courses and activities on a functional basis. All instruction given is to be focused directly on the subject matter, teaching pro-

cedures, and community activities and relations of the modernized rural school. The curriculum emphasizes (a) improved practices in rural school organization and management; (b) rural health and rural homemaking; (c) agriculture, nature study, and farm crafts; (d) technique of teaching the fundamental subjects in rural schools; (e) English, arithmetic, general science, and the social studies. In other words, rural school problems and rural life problems constitute the core of the curriculum.

4. *Student Teaching.*

A student-teaching program, regarded as an important phase of the teacher-training course, is employed as the core for other activities and phases of the curriculum.

Directed teaching is of two types:

(a) *General* observation and practice teaching designed to fix principles and habits fundamental to all good teaching. This is done in the campus practice school.

(b) *Specialized*, or apprentice, teaching designed to meet the actual problems and conditions of rural schools. This is provided in one-teacher, two-teacher, and consolidated schools enrolling farm children and located in a rural environment. These schools are selected in parishes where competent and effective supervision is provided.

Prospective teachers in the directed teaching and apprenticeship program are under the close supervision and guidance of normal school faculty members, Jeanes teachers, and other parish supervisors. They are given an opportunity of demonstrating for themselves, under realistic conditions both in the campus practice school and in rural schools, those techniques and knowledges which the Rural Normal School deems best suited to rural education in Louisiana. The apprentice teaching begins when the public-school term ends and continues for three months. (The average length of term of the small rural schools is six months.) This plan gives the various communities a nine months' school term and gives the regular teacher an opportunity to attend the Normal School for one quarter

(two, if he remains for the summer quarter). The student teacher returns to the Normal School for twelve weeks during the summer and completes the last quarter's work. At that time he does whatever remedial work is needed to correct weaknesses discovered during the apprentice-teaching period. In other words, the two-year curriculum consists of two nine-month sessions plus a twelve weeks' summer school.

Conclusion.

The Louisiana Rural Normal School is appropriately located in a rural section of North Louisiana. Its faculty members have been carefully selected from well-trained and successful rural teachers and supervisors of the State. Its buildings and equipment are unpretentious, and generally inadequate; however, these conditions are in harmony with rural-school facilities prevailing throughout the State. At present its financial support is so limited that a desirable salary schedule cannot be established and maintained and not all essential equipment can be provided from the State appropriation. It enjoys the good will of school officials and the people. It has liberal patronage from the territory it is intended to serve. It is not bound by tradition and by artificial or pretentious standards, yet it is attempting to meet reasonable and acceptable standards in scholarship.

THE WORK OF THE JEANES TEACHERS

Jeanes teachers are employed in twenty-seven parishes. Their services vary a little in different parishes and communities. All of them have as their major objective the improvement of classroom instruction. All Jeanes teachers and prospective Jeanes teachers received special instruction in the Jeanes teacher's duties in summer schools at Southern University in 1935 and 1936. They were given courses in Rural School Administration and Supervision, Principles and Current Practices of Curriculum Construction, and the Technique of Teaching in Small Rural Schools.

As a result of this special training for the job they were to do in the field, their services have been very much improved. The objectives of their supervisory programs and the means which they are using to attain their objectives indicate that they are conscious of modern trends in Rural Education.

These workers give most of their attention to rural school problems and rural life problems. In the curriculum study they are working with teachers trying to outline practical suggestions for enriching the curriculum used in Negro schools, keeping within reasonable limits of community means and resources. They are emphasizing the significance of the environment in the program of studies and assisting teachers in organizing teaching materials adapted to the instructional conditions, and the typical experiences of small rural schools.

As a result of the special summer-school instruction, these supervisors have acquired a sufficient understanding of the physical, social, and economic aspects of rural life in Louisiana to permit clear thinking regarding the functions and relationships of the rural teacher and school; and a knowledge of differences in the experiences and environment of rural children and in the organization of small rural schools which demand specific techniques or adaptations.

As a consequence of this knowledge, teachers have been assisted in organizing their schools so that pupils can work with ease and satisfaction; the number of recitation periods have been reduced in number and increased in length.

Teachers have been shown how to utilize local resources in enriching their teaching. In some instances, first steps in introducing an activity program have been initiated. The best trained teachers, under the guidance of the Jeanes teacher, have discontinued the writing of formal lesson plans and are preparing teaching units.

RECOMMENDATIONS

The figures and data contained in this report indicate that definite progress is being made in the Negro schools of Louisiana. At the same time the situation is so far from being satisfactory, the Division in the State Department of Education in charge of Negro Education is making the following recommendations:

1. A great majority of the school boards should increase appropriations to Negro schools for increasing teachers' salaries, providing more adequate buildings, teaching equipment, and supervision.
2. Definite efforts toward coordination should be made by all agencies of the State engaged in general education and rural development.
3. A special commission, financed by funds from without the State if possible, should be appointed to investigate and make recommendations on the following phases of Negro education:
 - a. Reorganization of teacher-education for Negroes in the State.
 - b. Teacher-training curricula.
 - c. Teacher certification.
 - d. College and teacher-training extension work.
 - e. Trade schools and industrial curricula.
 - f. School facilities, length of school term and teachers' salary schedule.
 - g. College curricula.

VOCATIONAL AGRICULTURE

S. M. JACKSON

Agriculture is the backbone of our Nation, as shown by 30,445,350 farm people, and Louisiana is an agricultural State, as shown by 161,445 farm people. Like every other business, farming must continually readjust itself to the rapid changes in American life. It becomes increasingly important for farmers and farm boys to study how to produce efficiently, where to produce, how much to produce, and how the different lines of production can be fitted into farm business so as to give the most effective and profitable use of land, labor, and capital.

Our American civilization still revolves around the home, and the farm family will be the unit on which our permanent system of agriculture must be built. There are numerous forces at work at this present time to increase both the attractiveness and productivity of the farm home, *Here again the public school is the one agency which has the organization to meet the issue and set up a program to make a worthwhile contribution to our rural civilization* The program in vocational agriculture fills a need apart from other school training, and should give specific training for a life's vocation which will help to build a structure to support a more wholesome type of rural life.

Vocational-agriculture education in Louisiana is aiding Louisiana boys to be good citizens in a democratic society. Training Future Farmers for the vocation of farming is sane, sound, practical and is of State- and Nation-wide importance for this and for future generations. Now is the time of all times when agricultural instruction with farm boys and their parents can, and will count most.

Every effort should be made to support the vocational-education program in agriculture in order for every farm boy and adult farmer to receive adequate instruction in agricultural education.

The vocational-agriculture teacher offers four types of instruction which are as follows:

All-day—

An all-day class of instruction in vocational agriculture is a regular vocational-agriculture class in the 8th, 9th, 10th, and 11th grades in the high school, which comes under the regular instructional program of the school, having a minimum of one ninety-minute period each school day.

In this type of instruction, a four-year course in vocational agriculture may be offered the students enrolled in the high school. In a four-year course, the boy is taught in such a way that he is capable of conducting the farm business in a business-like way. The enterprises consisting of supervised farm practice, that the student carries each year during these four years, give him actual practice in what he has been taught.

Day-unit—

This type of instruction is a modification of the all-day type in which pupils pursue the usual public-school courses, but take a minimum of ninety minutes a week in some short-unit course of instruction in technical agriculture, and carry on directed or supervised farm practice in agriculture. This type of instruction is offered to pupils 14 years of age and over when the vocational-agriculture teacher in a central school meets classes in a smaller school nearby for one, two, or three periods per week.

Part-time—

A part-time class is composed of out-of-school farm boys between the ages of 14 and 25, regardless of previous education, most of whom are already farming in some capacity, but usually with limited responsibility and are not regularly enrolled in school. Most of them have completed only some elementary-school grade, others a high-school course, or a part of it. Sometimes boys will be found in this group who have had some agriculture instruction or who have completed the all-day course in vocational agriculture. Stu-

dents in the part-time class, therefore, come from that vast number of out-of-school farm youths found between the all-day group composed of boys who are regularly enrolled in school, and the evening group which is composed of adult farmers.

The part-time group may be taught at anytime of the day and year that is convenient to the boys and teacher. The agricultural course content must be based on the needs of the individuals in the class, directed or supervised farm practice carried by the students, and a minimum of fifteen meetings of not less than ninety minutes each must be held.

Evening—

An evening class consists of instruction for adults by the vocational-agriculture teacher, giving systematic instruction on any phase of agriculture that may be of benefit to the farmers. It is suggested that the minimum age be 21 for these adult classes. This class will have to meet for a minimum of ten meetings of at least ninety minutes for each meeting.

FUTURE FARMERS OF AMERICA

The Future Farmers of America is a national organization of boys studying vocational agriculture. It is a non-profit corporation designed to recognize and encourage the natural instincts and tendencies of boys to organize themselves into groups and put enthusiasm and pleasure into their work and play. By establishing strong State-wide organizations with local chapters in each school where vocational agriculture is taught, an outlet for these instincts and tendencies is afforded our vocational-agriculture students. Such organizations, if they function properly, afford an excellent opportunity to teach vocational-agriculture students some of the fundamental principles of group leadership. Boys are taught how to conduct their own meetings and how to do things in an organized way. An increasing number of the competitive activities, such as livestock judging contests among different schools in a state, are being taken over by these student organizations

under the careful supervision of the local agriculture teachers and the state supervisors of agriculture. As a matter of fact, one of the main secrets of the success of any student organization rests in the ability of supervisors and teacher trainers and local advisers to delegate responsibilities to the students themselves, for unless a student organization is assigned something to do which is interesting and really worth while, there is no reason for its existence.

By having strong state organizations and a strong national organization of Future Farmers of America, additional incentive for achievement by local chapters is set up. Greater dignity accrues to local organizations if each member knows that his local chapter of the Future Farmers of America is a part of a State and Nation-wide organization of similar groups of vocational-agriculture students which have been established in all or a great majority of the departments of vocational agriculture throughout the United States.

The purposes of the organization are:

1. To promote vocational agriculture in the high schools of America by developing the pride of Future Farmers in vocational agriculture, encouraging members to improve the quality of their work in vocational agriculture, and the like.
2. To create more interest in the intelligent choice of farming occupations.
3. To create and nurture a love of country life.
4. To provide recreational and educational entertainment for Future Farmers of America.
5. To promote thrift by membership through the establishment of savings accounts, and investments in agricultural enterprises.
6. To afford a medium of co-operative buying and selling.
7. To establish the confidence of the farm boy in himself and his work.
8. To promote scholarship.
9. To develop local leadership.

The National organization is made up of State Associations. Each State Association is made up of chapters in the vocational-agriculture departments. There is an F. F. A. chapter in each department of vocational agriculture in Louisiana. The Louisiana Association, F. F. A. has the State divided into six districts. The State Adviser is the State Supervisor of Agriculture and the boys in each district elect annually a district adviser from the vocational-agriculture teachers in the district. The boys have their State and chapter officers and set up programs of work annually.

The Louisiana Association of Future Farmers of America has been declared the leading State Association in the Nation for the past four years.

Vocational-agriculture education in the State of Louisiana has continued to advance rapidly during the past few years.

During 1935-1936, there were 93 white departments and 57 negro departments. Federal funds amounting to \$92,217.96 were reimbursed to the parish school boards in payment of part of the salaries of these vocational-agriculture teachers.

The agricultural-education program in Louisiana has been recognized for the past four years as one of the most practical and outstanding in the Nation. There have been numerous demands for the establishment of new departments of vocational agriculture in the public high schools in the State. The Legislature has made available beginning with the fiscal year 1936-1937, approximately \$52,000 for the further development of the program for vocational-agriculture education in the State.

THE STATE MUSIC PROGRAM

S. T. BURNS

AIMS

The Music Program for Louisiana has as its goal making good music an important and vital part of the life of the State. It aims to teach every child how to sing, to make him want to sing, and to teach him a large number of songs to sing. It aims to make every child want to listen to music and to supply him with enough experience with good music so that he will enjoy music of the better type. For the most talented student, the State Music Program aims to offer some instruction in the more specialized technic of musical performance: class instruction in the playing of band and orchestral instruments, piano, and in singing.

The realization of these aims will greatly enrich the cultural life of the State. Every high school in a few years will have its glee clubs, choruses, choirs, bands, and orchestras. From these school organizations will go a steady stream of young people well versed in music, loving music, and having some skill in performance. The presence of these young people in their communities will result in better music in the home, in the church, and at all kinds of community gatherings. The better type radio programs will have more listeners, more towns will have community choruses, orchestras, and bands. The entire musical life of the State will be enriched, providing a fuller life for all.

MEANS OF ACCOMPLISHING THE PURPOSES

The realization of the aims of Louisiana's Music Program must begin in the schools. If the children like music, if they enjoy listening to good music, if they will participate in the making of music in school bands, orchestras, and choruses, such enjoyment and participation is the best possible guarantee of the ultimate spread of music in the entire life of the community.

To make this beginning, it is necessary to offer specialized music instruction in the schools. This specialized instruction falls into three divisions: general music instruction in the elementary school, general music instruction in the high school, and specialized music instruction (band and orchestral instruments, piano, and voice).

MUSIC IN THE ELEMENTARY SCHOOLS

In the elementary school, most of the teaching can be done successfully by the regular teachers. The problems of musical technic in these grades are relatively simple and teachers with a reasonable amount of musical background and training can carry on the day-by-day teaching. In the beginning of any musical program in the elementary schools, many teachers in the field are unable to carry on the work themselves. Their musical background is limited; they know few songs or musical activities which they can teach; they do not know just what objectives should be attempted. Such is the condition in any school where music has not been taught for many years and the schools of Louisiana are no exception.

To meet this condition the State Supervisor of Music has recommended the employment by parish school boards of music specialists who will work as supervising teachers to assist the regular-room teachers in the conduct of the music program. The supervising teacher of music plans music activities and gives outlines of these activities to the regular teachers; he does considerable teaching himself, aiming in a class lesson to teach not only the children but also the teacher by demonstration; he holds teachers' meetings at which he presents music materials to be used in the classrooms and shows the teachers how to use them; he may occasionally ask teachers to teach for him, following such lesson by the teacher with a personal conference at which points of the lesson are discussed.

As a minimum standard for the beginning years of the music program, it has been recommended that one supervising teacher be employed for every fifty elementary teachers,

being the largest number which could probably be visited weekly for periods of sufficient length to assure definite accomplishment.

NUMBER OF MUSIC TEACHERS EMPLOYED IN ELEMENTARY SCHOOLS

The spread of music instruction in the elementary schools as evidenced by the number of elementary supervising teachers employed has been very gratifying. This growth is shown in Table I, giving the total number of music specialists for the grades employed for the three years that the State Music Program has been in operation. The figures in the first column indicate the condition at the beginning of the Program; the figures in columns 2 and 3, the growth that has taken place to date. Most of these teachers are employed for full-time teaching in music. A few, however, work on a part-time basis, giving some of their teaching day to other activities.

TABLE I.—EMPLOYMENT OF MUSIC TEACHERS AND EXPENDITURES FOR BAND AND ORCHESTRAL INSTRUMENTS

Item	1934-35	1935-36	1936-37
1	2	3	4
Number Special Teachers Employed:			
Elementary Schools	57	81	116
High Schools	15	35	66
Instrumental Program	10	24	43
Expenditures for Band and Orchestral Instruments:			
From Parish School Boards....	\$ 1,435.48	\$ 3,873.90	\$ 6,421.33
From Contributions	410.50	3,127.25	4,606.61
Total Expenditures	\$ 1,845.98	\$ 7,001.15	\$11,027.94

MUSIC CLASSES FOR ELEMENTARY TEACHERS

Further evidence of the development of music in the elementary schools is shown in the large attendance of teachers in music classes. During the second year of the State Music Program, the demand for music instruction

from teachers in the field was sufficiently great to justify the State University's employing an extension specialist in music to devote his entire time to music extension classes. In addition to the University classes, similar classes for teachers were carried on by regular staff members of the other State schools: the Louisiana State Normal College, Louisiana Polytechnic Institute, and Southwestern Louisiana Institute. Attendance at these classes during the school year 1935-36 was 1,129. The activity is being continued this year with an enrollment of 647. During the summer session of 1936, a special short course of one month's duration in music for elementary teachers was offered at the Normal College. One hundred thirty teachers completed this course. It is estimated that in extension classes and summer courses combined more than 2,000 of the State's elementary teachers in service have taken special work in music to better fit themselves for its successful conduct in the classroom.

THE PHONOGRAPH PLAN OF TEACHING

In spite of the progress shown in the employment of music teachers for the elementary schools, much time will elapse still before all of the parishes can employ the needed music specialists and all teachers can secure the training needed to equip them for their teaching. In the meantime, the children in these parishes should be receiving some musical instruction. Primarily to make it possible for all schools to have some musical advantages, even those without special music teachers, the State Department of Education initiated the phonograph plan of teaching as a definite part of the State Program in its first year, 1934-35. Under this plan, songs suitable for children are recorded by artists, and recordings are supplied to the schools. Played on a properly adjusted phonograph, the records will give a good reproduction of the artists' performances for the children to imitate. It has been amply demonstrated that a teacher with no musical training, even without the ability to sing, can do acceptably good teaching of rote songs with the aid of the phonograph and records.

To assist schools in initiating the program, the State Department of Education has supplied records free of charge to the schools and has paid half the cost of suitable phonographs. During the first year, twelve records, offering thirty-two songs for the lower-elementary grades and thirty-one songs for the upper-elementary grades, were supplied. During the second year, fifteen records supplied by the State made available seventy-five songs for the lower-elementary grades and fifty-six songs for upper-elementary grades. During this year (1936-37), the state-supplied record sets offer seventy-seven songs for the lower-elementary grades and seventy-five songs for the upper-elementary grades. In addition to the song records, records suitable for rhythmic development (folk dances, singing games, marches, etc.) have been supplied by the State Department of Education for use in both music and physical education classes.

During the school year 1934-35, 544 schools in 60 parishes secured the records offered by the State and followed the program outlined.

During the school year 1935-36, 846 schools in 64 of the State's 66 school units participated.

Figures for the current school year (1936-37) are not yet complete but indications are that over half of the elementary-school children of the State will participate in the program offered and learn the songs made available through the phonograph plan of teaching.

VOCAL MUSIC IN THE HIGH SCHOOL

In the field of vocal music in the high school, because of the greater technical difficulty of high-school music and the problems arising in the conduct of high-school music classes, these classes must be carried on by special music teachers, either full- or part-time. The progress in this field of musical endeavor as shown by the number of teachers employed for music teaching in the high school is shown in Table I on page 32 for the three years, 1934-35, 1935-36, and 1936-37. Most of the teachers listed are part-time teachers

of high-school music; they divide their total teaching time either with the supervising of music in the elementary grades or with the teaching of some other subject. In the above mentioned table only accredited music teachers are listed. Account is not taken of a large number of teachers of other subjects, non-accredited in music, who carry on numerous musical activities in the high school: assembly singing, quartettes, operettas, and musical plays, etc.

Changes in the regulations regarding credit for music study in the high school made during the school year 1936-37 and announced in Bulletin 337, *Louisiana High-School Standards*, will doubtlessly lead to a great expansion of music offerings in Louisiana high schools. Heretofore, only two units of credit out of the sixteen required for graduation could be offered in music. Under the new regulations, four units may be offered. This new ruling will make it possible for high schools to offer a major in music, permitting a student to graduate with twelve academic units and four in music.

Because many of the high schools of Louisiana are small, part-time teachers of high-school music will probably always be numerous. As the program develops, however, by the influx of musically trained children from the elementary grades with their greater interest, and as more schools organize their curricula to offer the full four units of high-school credit in music now possible, the number of full-time teachers of high-school music will probably increase.

INSTRUMENTAL MUSIC

The growth of the instrumental program, as shown by the number of instrumental teachers employed by parishes, is shown in Table I on page 58. Most of these teachers devote full time to band and orchestral teaching, although in a few instances, the instrumental teacher has responsibility for some part of the vocal program or for some academic subject.

This table, presenting, as it does, merely the number of instrumental teachers employed by the parish school

boards, does not give a complete picture of the instrumental development in the schools. In many schools, where instrumental teachers have not been employed by the school boards, bands have been organized on a tuition basis, the pupils receiving the instruction paying the teacher a weekly fee. This procedure was suggested in Bulletin 293 as a means of getting the instrumental program started. Experience has shown that it has many weaknesses. Many parishes which tried the plan, later abandoned it. Statistics would show a decreasing number of schools using this plan. School officials appear to be recognizing the values of instrumental music and are showing an increasing willingness to assume the financial obligation which its conduct demands. This is a most encouraging tendency, for after all, if instrumental music does have educational value, and is desired by a reasonably large percentage of students, the payment of a qualified instructor for instrumental music should unquestionably be made from public funds.

Further evidence of the growth of the instrumental music program is shown in expenditures made for instruments by the school. These expenditures are shown in Table I on page 58. The figures here presented are classified under two headings: those made by school boards from public funds; and those made from other sources (local school funds, school programs, community clubs, etc.) Reports have not been received from all of the parishes carrying on one or more phases of the instrumental programs, but enough data is given to indicate the trend.

Encouraging growth is shown in this table in that for most parishes expenditures for instruments from year to year show a steady increase. Less encouraging is the small number of parishes which have given support to the instrumental program by appropriating public funds for the purchase of necessary equipment. The community and social values of bands and orchestras are obvious. There is probably no subject in the curriculum which makes more apparent and immediate returns to the life of the school and community than the school instrumental organizations. Recognition of this value is shown by the fact that in

schools where school boards have not made appropriations for instruments and equipment, the local schools and community organizations have attempted to assume the responsibility.

Failure of many school boards to purchase needed instruments is doubtlessly due to shortage of funds which delays expansion in this new field of endeavor. It is to be hoped, as school financial conditions improve, that school boards which have recognized the value of instrumental music by the employment of an instructor, will make it possible for the instructor to do his best work by supplying the schools with the basic instruments which individual children will not buy, yet without which successful instrumental organizations are impossible.

SPECIAL MUSIC BULLETINS AND CIRCULARS ISSUED

Since the initiation of the Program in September 1934, the following bulletins dealing with music have been issued by the State Department of Education.

Bulletin Number	Title	Date
289	A Program of Song for the Elementary Schools of Louisiana	February, 1935
293	Organizational Plans for Music Instruction in the Schools of Louisiana	April, 1935
300	Preliminary Announcement, High-school Music Courses for Louisiana High Schools, School Year 1935-1936	August, 1935
315	A Second Program of Song for the Elementary Schools of Louisiana	December, 1935
317	Operettas for the Elementary Grades based on State-Supplied Phonograph Records	February, 1936
334	A Third Program of Song for the Elementary Schools of Louisiana	January, 1937

In addition to the bulletins, 65 circulars dealing with all phases of the Music Program has been issued to superintendents, school boards, music teachers, school principals, and others.

TEXTBOOK ADDITIONS ON THE MUSIC LIST

Textbooks for the Elementary Grades

At the time the Music Program was initiated the Progressive Series, Books I, II, and III were the adopted books for use in the elementary schools. The schools were not adequately stocked with these books, however, because so few of the parishes for some years previously had given music attention in their courses of study. The Progressive Series was first published about 1915. Since that time, the same authors have issued another series, The Music Hour. Since, with the development of the Music Program, it seemed probable that large numbers of new textbooks would be purchased for the schools, it seemed desirable that these purchases should be of the newer, more modern Music Hour Edition. The Progressive Series was, therefore, superceded by the following volumes of the Music Hour Series:

For Grades I and II: *Music Hour in the Kindergarten and First Grade.*

For Grade III: *Music Hour First Book.*

For Grades IV through VII: *Music Hour Transition Book.*

This latter volume, the Transition Book, was prepared by the publishers especially for use in the Louisiana schools. The beginning of the program in the schools of Louisiana presented a rather unique situation. Music had been discontinued as a formal study in many of the elementary schools for many years. The children in all grades from the first through the seventh were unfamiliar with music notation and the theoretical aspects of music. So far as their music reading ability and information about the technical aspects of music were concerned, they should have begun at the very bottom, the same as the primary children.

To have used the primary book for the upper-elementary children, however, would have been unwise. Many of the songs deal with subjects which would not appeal to the older children as dignified and worthy of attention. The publishers, therefore, offered to put out a special edition of their Music Hour Series for use in the upper grades of the

schools of this State. This book was called the *Transition Book of the Music Hour Series*, the title of which has since been changed to *Beginner's Book for Upper Grades*. This book aims to present material which is very simple from the standpoint of technical difficulty and yet to use words which will appeal to the older children. Simple easy songs were, therefore, selected and new words were written for them. When the children of the upper grades finish this book, they will be able to go into the books designed for their grades without difficulty.

The book is now in the second year of its use in the elementary schools and seems to be achieving satisfactory results. The book will, of course, be replaced later by other books suited for the older children. When such replacement becomes desirable, the Beginner's Book (Transition Book) will then probably be assigned for permanent use in the fifth grade.

Textbooks for Instrumental Classes

At the time the State Music Program was started in September 1934, no instrumental music books were on the free textbook list. Many bands were in existence in the schools of the State. Almost all of them, however, were not under the schools' auspices, being carried on by private teachers on a tuition basis or under the supervision of band instrument companies who organized the bands as a means of selling instruments. At the beginning of the second year, as indicated in Table I on page 58, the number of bands in the schools under regularly employed instrumental teachers had increased to such an extent that it seemed wise to place some books on the free textbook list for use by the newly organized instrumental units. The following have been adopted and supplied widely to bands of the State:

The Lockhart Band Class Method. Book I.
Bridging the Gap Band Book.

The band program is developing so rapidly and the progress made by the players in the various instrumental

organizations has been so great that the two books listed above no longer supply the needs of the schools. It will be necessary to add many more books of a more difficult grade to follow the two already available if the instrumental groups are to progress as desired. In many parts of the State violin and stringed instrument classes have been organized with a view to forming school orchestras. For these groups also textbooks will be needed.

PROBABLE FUTURE DEVELOPMENTS

Many of the future needs of the Music Program in the Louisiana schools have been indicated in the preceding sections dealing with the various phases of the Program. This section will deal with additional probable developments.

MUSIC IN THE CURRICULUM

Much attention will have to be given in the near future to the place of music in the curriculum, both at the elementary and high-school levels. Time must be found on the schedules of schools for attention to the subject. Courses of Study and guides for music teaching must be put into the hands of teachers and supervisors of music for their help in the conduct of music classes. Material will also be needed along the line of possible correlation of music with other subjects of the curriculum, both at the elementary and high-school levels. Music can make important and valuable contributions to the teaching of many subjects in the curriculum; for example, English, history, geography, physical education. The curriculum in music to be worked out in the future must deal not only with music as a subject in itself but must also show how music can be made a vital part of the teaching of other subjects. It must make available to teachers of other subjects material which they can use in the conduct of their classes.

MUSIC LIBRARIES

This development will undoubtedly make necessary the acquisition of much music material for use not only in music

classes but in classes of other subjects where music has a contribution to make. Need will arise for a much wider variety of musical equipment than can probably be supplied from State sources. Plans should be laid for the establishment of music libraries. Each parish should have supplementary music libraries of books and suitable numbers for chorus, band and orchestra to be used in addition to the material made available on the State Textbook List. The number of copies of simple numbers selected for parish music libraries would not need to be unduly large; enough copies of any one book or individual number to supply the largest group in the parish would probably suffice, as the same book and the same number would not need to be used in all of the schools at the same time. One number or set of books could be used in a given school for three months, then returned to the parish office and reissued to another school. If parish school boards would set aside in their budgets a certain sum each year for the purchase of such supplementary material, it would not be many years before music teachers and teachers of other subjects would have available a large and useful collection of suitable music material available for almost any type of program.

Consideration should also be given to the possibility of establishing a State Music Library. This Library would function in somewhat the same manner as the parish libraries, with the material kept at some central point and issued to music teachers or parishes for use as needed. Some plan of cooperation between the State and parish libraries might be worked out whereby the State would not deal with the individual schools but with the parish units. Details of such a plan are at present necessarily hazy, but the establishment of music libraries, both parish and state, as suggested in this section, would serve not only to fill a need which is already being felt, but would fill the need in the most economical way possible.

ATTENTION TO MUSIC NEEDS IN BUILDING PROGRAMS

It will be highly desirable, as school boards embark on building programs or in the construction or repair of school

buildings, that attention be given to the needs of the music departments in these schools. The music department will function much more smoothly and with vastly less annoyance to other factors of the school if it has its own quarters for the conduct of its classes and for the storage and care of its equipment than if it has to carry on its work in auditoriums, gymnasiums, or rooms used for other purposes. Music rooms can be made almost sound-proof and can be placed in buildings so that the conduct of the music classes will not annoy other classes. Attention should be given to these details in all school buildings which are being erected or remodeled.

STANDARDS FOR EQUIPMENT

As the Program develops also, certain standards of equipment will need to be established. General recommendations along this line have not been made heretofore because it seemed undesirable to set up standards for music equipment before the Program was well under way and before the financial conditions of the schools were such as to make the securing of the recommended equipment possible. The program has developed to such an extent at present as to make some standardization desirable. Ultimate standards can be set up only over a period of years in the light of much experience in meeting needs as they develop. A beginning might well be made at present, however, by setting up certain limited standards of musical equipment for approved schools, both at the elementary and high-school level.

SCHOOL LIBRARIES

LOIS SHORTESS

In November, 1935, Superintendent Harris made the following statement at the annual meeting of the Louisiana Teacher's Association:

"It is so essential that every high-school department and every grade of the elementary schools should be equipped with a good library that the State should, I think, furnish free library books and periodicals just as it does textbooks. There is not much difference in the importance of the two classes of books. I shall ask the Legislature at its next meeting to place library books on the free list, and the State Board of Education to equip all grade rooms and all high-school departments with libraries meeting good standards."

At the 1936 session of the Legislature a bill was introduced embodying this request, and was passed as Act No. 153. It provides that part of the severance tax fund shall be devoted to supplying school supplies, including library books, free of cost to the school children of the State. The books are to be purchased by the State Printing Board, which is composed of the Governor, the Secretary of State, and the State Auditor; they are to be distributed by the State Board of Education. In November, 1936, this Act became an amendment to the Constitution of Louisiana.

In preparation for the administering of this plan, forms were distributed to the white schools, public and private, in February, 1936, by the Library Division of the State Department of Education. When filled out, these forms presented an account of the library resources and needs of each school in the State. Next, an apportionment was made, each school being informed of its quota in number of books. In arriving at this quota, the following factors were taken into consideration: book needs of the library, as shown in its report; the library standards to be met ac-

according to the enrollment of the school; and the amount of money estimated as available for this purpose for 1936-37. In the case of the high schools, the assignment of the full quota allotted to the school was made conditional on compliance with certain standards in regard to training of the librarian, time spent by the librarian in the library, and suitable quarters for the library.

In accordance with the quota assigned, each school sent in to the State Department of Education an order for the library books desired. These orders were checked, corrected, and supplemented when necessary in order to make them acceptable to the Department.

A slightly different arrangement was made for the libraries of the colored schools. Under the direction of the State Agent for Negro Schools, plans were made for setting up circulating collections in various parishes of the State, and orders were prepared to supply the books needed for these collections.

When the work on all the orders was completed, a report of the steps taken was made by Superintendent Harris to the State Printing Board, which will supervise the purchase of the books.

Although state aid to school libraries is fairly common, Louisiana is the first state to attempt to furnish library books outright to the schools. Naturally, much work remains to be done in this pioneer undertaking. However, it is the desire of the State Department of Education to bring every school library in the State up to an acceptable minimum standard, and it is anticipated that within a few years this purpose will have been accomplished.

A saving of thousands of dollars to the State will be effected through the State-wide book-mending project established in the fall of 1936 under the joint sponsorship of the State Department of Education and the Works Progress Administration of Louisiana. On these projects workers trained and paid by the WPA are engaged in mending and recasing worn textbooks for use in the schools. The

space, supplies, and equipment necessary are furnished by the State Department of Education, with the cooperation of local school authorities.

As the workers become more experienced, school library books will be turned over to them for repair. It is planned also that the projects will be extended to other parts of the State. The parishes in which they have been established are: Allen, Caddo, East Baton Rouge, Lafayette, Orleans, Ouachita, and Rapides.

HEALTH, PHYSICAL, AND SAFETY EDUCATION

JESS W. HAIR

During the session 1935-36, the Health-, Physical-, and Safety-Education Program made distinct progress.

Health Education. At the present time, there are organized thirty-eight parish health units including the City of New Orleans. Plans are moving forward for organizing units in six other parishes, and it is hoped that within the next biennium at least forty-eight parishes will have health units. The parishes of Jefferson, East Baton Rouge, and St. Charles have health nurses who work in the schools as do also the Ouachita Parish High School and the City of Lake Charles. Physical examinations in a number of schools throughout the State have been conducted by physicians and nurses who have given their services at times during the past year.

Through the facilities of health units, school children are being examined for physical defects, and arrangements are being made for their correction. Every effort is being made to have every child attending school in the best of health so that good school work will be possible.

The teaching of Health in the public and private schools of Louisiana is improving, and plans are working toward a functional Health Program that will really place health first in education in Louisiana. The Metropolitan Life Insurance Company has furnished gratis to hundreds of our teachers, pamphlets and other material that have been valuable to our Program. In our high schools, we do not yet have a subject placed in the curriculum and taught as an organized unit. We are working, however, toward that goal, and we are hoping through the curriculum study to bring this about.

Physical Education. According to reports made to the office of the State Supervisor of Health and Physical Education, programs in physical education are now organized

in practically every school in the State. The State Supervisor has checked the programs in numbers of schools, and his reports show splendid progress in nearly all of them. Many of the schools have more time allotted to Health and Physical Education than the standard time requirement of 120 minutes weekly for each child.

The improvement in the training of teachers in Health and Physical Education has been marked. This is made possible by the excellent cooperation of the State institutions which have in a number of instances enlarged their facilities to enable their students to meet the new requirement set up by the State Department of Education. Extension courses in Health and Physical Education are being offered by practically every four-year teacher-training institution in the State. In addition, the graduate school at Louisiana State University offers its facilities to persons interested in advanced work in the field of Health and Physical Education.

Nearly 4,000 copies of the textbook, "Physical Education for the Elementary Schools" by Neilson and Van Hagen, and 6,000 copies of State Department of Education Bulletin No. 296, "A Manual of Health and Physical Education" have been distributed to principals and teachers in the State. School boards are furnishing equipment in all instances so that it will be possible for every student to enjoy a well rounded program in Health and Plays and Games.

Safety Education. The State Department of Education recommends one period weekly of twenty-five minutes for the teaching of Safety Education to every child in the public and private schools. A course of study has been prepared and placed in the hands of principals and teachers. This course covers school, home, automobile, and occupational safety, as well as recreational safety. Specific schools in Louisiana are being contacted with regard to teaching definite courses in automobile driving.

Much interest has been evidenced in the study of first aid during the past year, and approximately 3,500 copies

of the American Red Cross "First Aid Textbook" have been issued to principals and teachers.

It is hoped that our young people may be adequately trained in the art of Safety so that the tremendous losses endured by the public may be lessened. The State Department of Education has recognized this as one of the practical, fundamental aims of modern education, and has accepted such training as a primary responsibility in the schools.

With the definite progress already achieved, we are inclined to be most optimistic concerning the Health-, Physical-, and Safety-Education Program of the future.

THE AUDITING DIVISION

REX BEARD

The Auditing Division of the State Department of Education was established early in the fiscal year of 1935-1936 for the purpose of rendering assistance to the local school officials throughout the State in the matters of improvement of financial accounting, and of checking with these officials the budgets of their respective boards.

The auditor of the State Department of Education, in cooperation with the chief of the auditing division of the office of the State Supervisor of Public Accounts, devised and had installed in the various school board offices throughout the State a system of bookkeeping for the general maintenance funds of these boards. The necessary bookkeeping materials were supplied to the boards by the State Department of Education, thus insuring uniformity of bookkeeping methods. The new system was so devised as to bring into the bookkeeping records of a school board the debts of the board, to separate the expenses according to the years in which the expenses were incurred, and to provide means of recording the expenses as they are incurred. In other words, the new system placed the financial accounting of the boards upon an accrual basis. After one year of experience with the operation of the new system, it appears that the chief benefit that can be claimed for it is that the school officials can more easily exercise adequate control over their finances because of the ease with which financial data can be secured from the bookkeeping records. This is of great importance because nothing in the board's administration of its affairs is more important than for it to know at all times the status of its finances and obligations. The present system of bookkeeping is as simple as it is possible for an adequate system of bookkeeping to be and yet meet the requirements. The bookkeepers and secretaries in the school board offices throughout the State are to be complimented upon their eagerness and willingness

to master the principles of this system. This they have done practically without exception, with the result that the financial accounting work now going on in the offices of the school boards is on a very effective basis. The Auditor visits the offices from time to time and reviews with the bookkeepers and secretaries the proper methods of recording the financial transactions of their boards and of reporting thereon. Numerous school executives have expressed themselves as being highly pleased with the present system.

The State Department of Education has for many years stressed the importance of correct budgetary procedure on the part of the local school boards and for several years now it has reviewed the budgets of the local units. Under the law the State Budget Committee, composed of the Governor, the State Treasurer, and the State Superintendent of Education, is charged with the duty of reviewing school board budgets, and the State Budget Committee requires of the State Department of Education that it supply the school boards with the proper budget forms, that it render all possible assistance to the local school officials in the preparation of the budgets, and that it report to the Committee the status of the budgets after making a careful examination of same. The State Department of Education has delegated these duties to its auditing division.

A brief summary of the manner in which the budgets are examined follows:

(1) Inspectional checks are applied to all items of receipts expected from both state and local sources. The anticipated receipts from state sources are compared with estimates sent out by the State Department of Education to the local officials. Local receipts, principally tax collections, are checked to see that the amounts listed are reasonable. Local tax rates and assessments are used in making these checks.

(2) Inspectional checks are applied to the principal items of disbursements. Amounts budgeted for instructional service, transportation, janitor service, etc. are

examined in connection with the payroll needs for such services, and the payroll needs are ascertained from copies of the payrolls submitted with the budgets.

(3) Where debts exist, a careful study is made of the board's policy in retiring the debts. Emphasis is placed upon the retirement of such debts, as rapidly as possible, without doing injury to the school system.

(4) When revisions of budgets seem desirable and necessary, the school officials concerned are invited to visit the office and discuss the necessity or desirability of such revisions. Agreements are reached, the budgets revised in the light of these agreements and the Budget Committee is then advised as to the status of the budgets. In other words, all necessary revisions of budgets are made before they are turned over to the members of the State Budget Committee.

(5) Payrolls, submitted with the budgets, are examined to ascertain whether or not satisfactory salary schedules are followed by the school boards in fixing the salaries of teachers and transfer drivers. Apparent discriminations are called to the attention of the proper school officials and request is made that the salaries be changed to fit into a definite salary schedule.

The work of the Auditor does not end with the examination of budgets and the subsequent approval of the budgets by the State Budget Committee. When he visits school board offices, he checks the records of actual receipts and disbursements with the budgets of receipts and disbursements and recommends, when necessary, the revision of the budgets to conform to the needs of the boards in the light of their actual needs as shown by their records at the time of his visit. This form of cooperation with the local school officials has the wholesome effect of causing the school officials to exercise great care in the preparation of their budgets and in the supervision of their finances to stay within the limits set up by the budgets.

VOCATIONAL REHABILITATION

E. G. LUDTKE

Vocational Rehabilitation means a rendering of disabled persons fit to engage in some trade or profession by which they may earn their livelihood.

The Federal Government passed an act June 2, 1920 providing for the vocational rehabilitation of persons disabled in industry or otherwise and for their return to employment. This act is administered by the United States Department of the Interior, Office of Education.

The act allots Federal money to the states for the support of their work, with the provision that each dollar of Federal money shall be matched by a dollar of state, or money from some other source.

The act defines "disabled persons" to include "any person who by reason of a physical defect or infirmity, whether congenital or acquired by accident, injury, or disease, is, or may be expected to be totally or partially incapacitated for remunerative occupation."

Persons must be at least fourteen years of age. Aged, epileptic, or feeble-minded persons shall not be considered eligible, nor those whose disability is only temporary, nor others whose condition would not permit them to hold a position after training.

Funds are available to pay for the cost of tuition, books, supplies, expense of tutor (in case of the blind), where essential to the training program, half the cost of an artificial appliance; when necessary, transportation of a trainee to the place of training.

Medical examination will be authorized to determine the physical fitness of the applicant.

This service is not charity, it is a scientific conservation of human beings, an investment in applying unused energy to production.

The sooner such training is started after the illness or accident, the sooner confidence and happiness are restored. Morale is necessary to success, and it takes a greater courage if a long period of dependency occurs.

The average cost, including all expenses, of rehabilitating these disabled persons does not exceed \$300, divided equally between expenditures from Federal, State and Local funds. This cost of rehabilitation is all the more significant when it is contrasted with the cost, between three hundred and five hundred annually, of maintaining a disabled person at public expense. No service being rendered by the Federal and State Governments brings more immediate and profitable results than this constructive program of re-fitting disabled persons for useful work. Frequently a disabled person in the first year after rehabilitation is able to increase his former earning capacity by an amount equal to the cost of his rehabilitation. The average age of those rehabilitated is thirty-two, at which age life expectancy is twenty or more years. The significance of this investment of public funds is not only that it brings immediate returns, but also that it yields continuous and cumulative profits.

Disabled persons cannot be rehabilitated in groups. Because of varying degrees of disability, education, age, capacity, energy, spirit or determination, each case presents its own problem and difficulties and requires its own specific solution. The whole work is organized on what is known as the case method. The disabled person is interviewed for the purpose of securing a complete inventory regarding his disability, education, occupational experiences, capacity, personality, financial resources, attitude toward rehabilitation, his desires concerning return to employment, opportunity for employment and possibly other factors.

All of these factors are thoroughly studied for the purpose of developing the best plan of rehabilitation in each case. Such a plan in all cases requires on the part of the rehabilitation agent throughout the entire program, a general service to the disabled person in the nature of advise-

ment, guidance and cooperation. This service does not cease until the disabled person has been definitely established in remunerative employment.

A careful survey of the person's past vocational experience is always made to determine if any of the trade knowledge can be used in the new objective that will interfere as little as possible with his or her disability. A list of objectives is then selected that the disabled person can perform and from these one is selected that is feasible from the standpoint of financial status of the applicant, ability, ease of training and what is most important is the certainty of securing employment at the end of training.

Sometimes it is necessary to secure artificial appliances for the applicant before starting training.

After the objective is determined a place is found to train the applicant. This may be in some school, in industry, or any place where the applicant may receive the best preparation. It sometimes happens that after advisement a job may be secured without further preparation. This is seldom true among our applicants. More often some training is necessary.

The training that may be provided must be vocational, that is, leading to a job. It is not limited to any school or kind of school, or to a school at all. The kinds of jobs are only limited by the adaptability of the trainee and the types of training are only limited by practical considerations. For statistical purposes, training is classified as institutional, employment, tutorial and correspondence.

During 1936, one hundred and twelve (112) persons were rehabilitated by the Louisiana Rehabilitation Department, and eight hundred fifty-four (854) were in the process of rehabilitation.

THE WPA EDUCATION PROGRAM IN LOUISIANA

M. S. ROBERTSON

In May, 1936, Dr. L. R. Alderman, Federal Director of WPA Education, Washington, D. C., and Mr. J. H. Crutcher, Administrator of Works Progress Administration in Louisiana, requested Superintendent T. H. Harris to assign Doctor M. S. Robertson to the work of Director of the WPA Education Program in Louisiana. He assumed the duties of Director on June 1st. At that time the program was operated as a phase of the Division of Women's and Professional Projects. On December 1st, the program was organized as a separate division of the Works Progress Administration. It is continuing with no changes in supervisory personnel.

The Education Program is divided into two divisions—the Adult Education Program and the Nursery School Program. The former provides education facilities for persons over sixteen years of age who wish to enroll in the classes and who are not already enrolled in the public schools. The Nursery School Program provides facilities for pre-school children, two to four years of age. The nursery school children in each school are provided with educational leadership of two teachers and two helpers. They are kept in school from 8:30 or 9:00 in the morning to 2:30 or 3:00 in the afternoon. They are provided a mid-morning and noon lunch. They are also provided an early afternoon nap under the supervision of the teachers. Medical inspection is given daily by one of the teachers and frequent examinations are made by a health officer.

The State Department of Education furnishes textbooks for use of adult students on a loan basis just as books are supplied to children in the public schools. Parish School Boards furnish classrooms, heat and light wherever it is found convenient to operate classes in school buildings. The WPA pays the salaries of all teachers and makes available

a limited amount of funds for the purchase of materials such as paper, pencils, tablets and other things which are necessary for instruction but which the State Department of Education as sponsoring agent does not contribute.

Teachers are divided into three groups—Intermediate, Junior and Senior—according to their educational qualifications. The salaries of teachers in these different groups are determined by the prevailing rates in zones set up by the Employment Division of the WPA. These salaries range from the minimum rate of \$33.00 to the maximum rate of \$81.90 per month. All teachers on the program are required to work 132 hours per month. Approximately one-half of this time is devoted to actual teaching and the other one-half is spent in promotion and preparation.

The state and district supervisory personnel consists of:

1. One State Director.
2. One Assistant to State Director.
3. Three State Supervisors.
 - a. A Nursery School Supervisor.
 - b. A Supervisor of Homemaking and Parent Education.
 - c. A Supervisor of Literacy (Colored).
4. Four District Supervisors.

In addition to this State Supervisory Staff, a staff of thirty-four local supervisors is employed. These people are in charge of one or more parishes with two or three exceptions where more than one supervisor is employed in a single parish. For example, in Orleans Parish we have several local supervisors.

The attached statistical report for the month of November shows the number of teachers, supervisors and classes, as well as the number of enrollees. It will be noted from this report that at the close of work in November the program employed 897 teachers, including local supervisors and the several state and district supervisors, and that there were 5,256 classes in operation with an enrollment

of 54,407 persons since July 1, 1936. I wish to call attention to the fact that of the total number of enrollees, 11,128 were doing literacy work in 1,215 classes and that 486 children were enrolled in the seventeen nursery schools then in operation.

With the exception of the supervisory personnel, all persons employed on the Adult Education Program are certified relief clients. Certification from the standpoint of relief is always made by the Social Service Division of the FERA. The competency of teachers is passed upon by the State Director. While the majority of teachers in the Adult Education Program hold valid teacher's certificates, in many instances persons who are considered competent to teach are employed even though they do not have a teacher's certificate. All teachers are recommended from the standpoint of competency by the local supervisors and the parish superintendents of schools in the parishes where the classes are to be operated. Adult classes are operated in all parishes of the state with the exception of Lafourche, St. Martin, Cameron, DeSoto and Tensas where no unemployed teachers who are certified for relief are found.

Monthly Report On Emergency Education Program

MONTH NOVEMBER 1936

Type of Education (1)	No. of Teachers (2)	No. of Super- visors (3)	No. of Classes* (4)	No. of Enrollees (5)

Totals	897	7	5,256	54,407

DIVISION OF REFERENCE AND SERVICE

JNO. M. FOOTE

The Division of Reference and Service was established in the State Department of Education in 1925 following a series of conferences between the State Superintendent of Education and representatives of the General Education Board of New York City. The State Superintendent became convinced of the need for such a Division and the General Education Board on its part agreed to underwrite the cost until such time as funds could be provided from State sources. The arrangement was quite satisfactory and continued for a period of four years, after which the funds necessary to maintain the Division were provided by the State. During the intervening twelve years the personnel of the Division has continued without interruption. Several clerks have been added from time to time as additional duties have been delegated to the Division by the State Superintendent. The activities have spread over a wide range of educational territory during the past twelve years. It has had occasion to study many specific problems, make educational surveys, answer numerous questions, submit data, and compile information bearing upon many school subjects as they have arisen for study and solution. Meanwhile, several functions devolving upon the State Superintendent have been assigned to this Division. The more important and regular recurrent duties may be summarized as follows:

1. The Division set up the plan for the State Equalization Fund when it was first established in 1930 and has continued since that time to work out the details of the annual distribution. This fund now exceeds one and one-half million dollars annually and is used for the purpose of aiding the weaker parishes. It is a part of a sound plan for apportioning State school money in which special recognition is accorded to those parishes unable to operate their schools.

2. One of its largest and most important functions is the execution of the free textbook program which has been in effect since 1928. The duties include matters relating to the making of contracts with publishers; purchase, assembling and distribution of the books through a State depository to parish school boards; and rules and regulations governing handling and use within the several parishes. The duties also include the keeping of records, reports, and detailed accounting. The program for free textbooks at the expense of the State has proved to be sound educationally, a saving to the State in cost, and of great service to teachers and children. It may be a matter of interest to say that the State distributes annually approximately one million textbooks for the use of one-half million children at an aggregate cost of six hundred thousand dollars, or a little over \$1.00 per child.
3. Beginning January 1, 1936 the State Board of Education inaugurated the policy of furnishing several basic items of school supplies, including pencils, pencil paper, and writing paper to all schools, public and private, throughout the State. The decision to distribute such items was made only after it was found that funds were available to pay the cost and upon obtaining legislative approval. Details of purchase, distribution, and regulations were delegated to the Division of Reference and Service. The decision to furnish the essential supply items needed by children in their daily school work was predicated largely upon the fact that a great percentage of school patrons are poor and experience real financial embarrassment in meeting such costs out of their very limited incomes. A further reason is the fact that such materials can be bought and distributed to the schools in large quantities at a very low cost compared with the usual retail prices commonly paid. The distribution will continue from year to year as authorization was obtained from the

Legislature at its Regular Session in 1936 together with an annual appropriation of \$200,000, or as much thereof as may be necessary. The cost thus far is approximately \$175,000 for a school session, or thirty-five cents per child registered. The need can be easily taken care of within the appropriation unless the number and variety of school supply items should be unduly increased.

4. A time consuming but none the less important duty is the preparation of the Annual Statistical and Descriptive Report of the State Department of Education. It is primarily a compilation made from detailed reports received annually from parish superintendents. Much of the data included in the parish reports is compiled directly from reports submitted by school principals. Data thus compiled for the State and arranged by parishes can be depended upon for a reasonable degree of accuracy. The tables supply rather complete statistical treatment on all matters of money, including the apportionment of the State Equalization Fund; attendance of pupils; number, qualifications, and tenure of teachers; number and size of schools; expenditures for new buildings, essential facts on the transportation of children to consolidated schools; detailed information on State-approved high schools; the certification of teachers; information on special departments, such as agriculture, home economics, vocational education, physical education, health, music, and school libraries; the number and cost of State-owned (free) textbooks and school supplies distributed; and major facts relating to the current operation of State-supported and private higher institutions of learning. The report is designed to furnish school officials, teachers, and the general public with reasonably accurate information in readily accessible form on the essential features of the public-school system, and in addition, to record a historical cross-section of education in the State.

5. The preparation of an Annual Report on education to the United States Office of Education in Washington and other special reports as may be called for from time to time.
6. The Division is frequently called upon to prepare for departments of education in other states, colleges, libraries, and philanthropic institutions reports on special phases of education within Louisiana with which they happen to be concerned. As a matter of courtesy it is our custom to respond to such calls when they come to us from authoritative sources and when the purpose has some educational significance or value.
7. The essential record and report forms used by teachers, schools, and superintendents in accounting for the essential facts concerning the local and state school systems were designed by this Division when it was first organized some ten or twelve years ago. This educational accounting program is modified and edited from time to time as the schools grow and improve and as changes are needed. The value of such a system lies in its uniformity and in its adaptability to the plan of school administration and financing prevailing in the State. It articulates closely with approved accounting systems used in states throughout the country.
8. Questions of administration, finance, and school laws arising among superintendents of education and parish school boards are frequently referred to this Division for solution or information bearing thereon. Such questions may require the preparation of a salary schedule, a plan for the consolidation of small schools, the voting of a special tax, working out of bond schedules, and other matters of this nature. It is the policy of the Division to respond when called upon for such aid.

STATISTICAL STATEMENT
OF THE
OPERATION OF THE SCHOOLS OF THE STATE
1935-1936

TABLE I
FINANCIAL REPORT OF THE STATE DEPARTMENT OF EDUCATION

ITEM	Expended by State Department	Apportioned to Parishes	Total
1	2	3	4
I. State Appropriation for Maintenance:			
1. Salary State Superintendent.....	\$ 6,000.00	\$	\$ 6,000.00
2. Office salaries.....	49,961.00		49,961.00
3. Office expense.....	5,000.00		5,000.00
4. Per diem and expense State Board.....	5,000.00		3,000.00
5. Traveling expenses.....	11,000.00		11,000.00
II. Malt Tax Fund:			
6. Adult illiteracy.....	330.00		330.00
7. Salaries Division of Music.....	4,462.50		4,462.50
8. Travel, Division of Music.....	1,709.75		1,709.75
9. Civilian rehabilitation.....		5,081.70	5,081.70
III. Free Textbook Fund:			
10. Administration.....	9,843.88		9,843.88
11. Purchase of textbooks.....		575,730.03	575,730.03
12. Purchase of school supplies (paper and pencils).....		93,388.07	93,388.07
13. Printing forms.....	1,986.85		1,986.85
14. Purchase of phonographs and records.....		16,884.94	16,884.94
15. Transferred to the Public School Fund.....		55,030.27	55,030.27
IV. Federal Board for Vocational Education:			
16. George-Elzey Fund.....	1,800.00		1,800.00
17. Smith-Hughes Fund.....	11,101.19		11,101.19
18. Civilian rehabilitation.....	3,321.42		3,321.42
V. Special Funds:			
19. General Education Board.....	9,840.00		9,840.00
20. Julius Rosenwald Fund.....		1,032.00	1,032.00
21. Anna T. Jeanes Fund.....		1,650.00	1,650.00

¹Non-revenue receipts result from incurring debt or the depletion of school property. They are not derived from taxes and do not increase revenues for current payments.

²Loans from banks do not increase the income for the schools. They are temporary loans that must be repaid within the fiscal year.

Registration for the year of four quarters is reported in terms of the regular academic year of 36 weeks—an accepted standard. The average registration of the summer session of 12 weeks was reduced to the basis of the regular session by dividing by 3 and then added to the average registration during the three quarters of the regular session.

¹Data for Northeast Center at Monroe included.

⁵Figures for previous year used.
