STATE DEPARTMENT OF EDUCATION
OF LOUISIANA

NINETIETH ANNUAL REPORT

FOR THE
SESSION 1938-39

Prepared by
Division of Reference and Service

Issued by
T. H. HARRIS
State Superintendent of Public Education

**STATE BOARD OF EDUCATION
OF LOUISIANA**

JANUARY 1, 1940

Appointive Members:

First Public Service Commission District... C. C. Henson,
New Orleans, La.
Second Public Service Commission District... W. A. Montgomery,
Lafayette, La.
Third Public Service Commission District... Dr. C. W. Smith,
Ruston, La.

Elective Members:

First Congressional District..... A. J. Gelpi,
New Orleans, La.
Second Congressional District..... Mrs. Eleanor H. Meade,
Gramercy, La.
Third Congressional District..... Walter J. Burke,
New Iberia, La.
Fourth Congressional District..... E. A. Conway,*
Shreveport, La.
Fifth Congressional District..... Geo. T. Madison,
Bastrop, La.
Sixth Congressional District..... H. H. Holloway,
Roseland, La.
Seventh Congressional District..... Parrish Fuller,
Oakdale, La.
Eighth Congressional District..... H. H. White, President,
Alexandria, La.

State Superintendent of Public Education and
Secretary of State Board of Education..... T. H. Harris,
Baton Rouge, La.

* Deceased.

LETTER OF TRANSMITTAL

Baton Rouge, Louisiana
April 5, 1940

*Governor Earl K. Long, Members of the House and Senate,
President H. H. White, and Members of the State Board
of Education.*

Gentlemen:

In compliance with law, I submit herewith the annual report covering public school activities for the session of 1938-1939.

The report is divided into two parts. The first part consists of statements by the heads of the various divisions of the State Department of Education, giving facts, conditions and results of activities of these different divisions; and the second part gives the essential statistics covering such matters as finances, attendance, teaching staff, transportation, etc.

Reports are usually rather dull reading. I think, however, that you will find that the statements by the heads of the different departments of this office and by the presidents of the various State institutions controlled by the State Board of Education do not conform to this general rule but, to the contrary, I believe that they will be found both interesting and highly informative. I trust that you may find time to devote an hour or two to examining them. I indulge this hope for the reason that their thoughtful examination will result in a rather definite and correct picture of the public school system of Louisiana, pointing out the various fields of activities, and some notion of the results that are being achieved.

The impulse is pressing on my part to discuss here the purposes and accomplishments in the various phases of education sponsored throughout the State. I refrain from

doing so, however, because this would be a repetition of the statements and spirit of the reports to which I have referred, and so I do no more than say that it is my opinion that solid educational foundations have been established in our State. I think we have reason to be proud of the public school facilities provided for our children. This is true as to the variety of educational offerings and the rather generous support which has been provided. Credit for the accomplishments in the field of education goes to numerous agencies, such as, Governors, Legislators, parents, taxpayers, parish school officials, principals, teachers, the State Board of Education, the Louisiana Teachers Association, the Parent-Teacher Association, the staff of the State Department of Education, and others who believe that intelligence and character represent the best investment that a state can make.

As I leave the office and retire to private life, I wish to thank all friends of the children of our State for their constructive co-operation during the last 32 years, my tenure of office, and to give them credit for the remarkable progress that has been made in the advancement of education.

Yours very truly,

T. H. HARRIS,

Superintendent of Education.

PART I

A DISCUSSION

OF

CERTAIN EDUCATIONAL TOPICS

REORGANIZATION AND REDIRECTION OF EFFORT IN THE STATE DEPARTMENT OF EDUCATION*

CO-OPERATIVE FORMULATION OF DEPARTMENT POLICIES

Since January, 1939, members of the State Department of Education have been studying and planning together in professional staff meetings and special committees. There was general agreement that there had been some duplication of effort, insufficient co-ordination of activities, and occasionally conflict of policies. In order to help solve some of these problems the various divisions have explained to the entire staff the details of their work, plans, and policies. The following divisions have reported: High School, Elementary School, Teacher-Certification and Training, Vocational Home Economics, Trade and Industrial Education, School Libraries, Music, Negro Education, and Reference and Service.

Plans have been made for other divisions to present their work to the staff.

As a result of this co-operative effort the following policies were agreed upon for the 1939-40 school session:

ONE GENERAL SUPERVISORY PROGRAM FOR THE ENTIRE STAFF

A supervisory program was co-operatively developed by staff members of the State Department of Education, and has been used by all members in an effort to improve instruction on all levels and in all departments. The belief is that this program has had a unifying influence and has helped to co-ordinate the educational program.

Supervisors were requested to do some observation on all levels and in all departments in the schools they visited. It was understood that supervisors in special fields were to study their departments in relation to the total educa-

*Prepared by C. L. Barrow.

tional program, giving most of their time to their particular field.

Staff members were requested to keep in close touch with teacher-education institutions and, so far as possible, to co-ordinate the pre-service training of teachers (work in teacher-training institutions) and the in-service training of teachers (professional supervision from the State and parish offices).

EXPERIMENTATION

It is recognized that many modern educational practices are difficult to incorporate in the high-school program under the present organization. During the 1939-40 session the State Department of Education encouraged intelligent, well-planned, purposeful experimentation in a few selected schools. The High-School Division offered to grant permission for some departure from the present organization, procedure, and curriculum, provided definite plans were presented in advance for approval. In each case it was definitely understood that the experiment would be supervised by the principal and parish supervisory officials. Plans were to be approved by the parish superintendent and principal before submission to the State office. Members of the State Department offered to co-operate in the supervision of the projects. All schools which are members of the Southern Association of Colleges and Secondary Schools were encouraged to evaluate their schools by using the *Evaluative Criteria* and the manual *How to Evaluate a Secondary School* prepared by the Co-operative Study of Secondary School Standards.

THE ELEMENTARY SCHOOL*

The registration for the school session 1938-39 indicates that the elementary schools have ceased, at least temporarily, to expand. In both the number of elementary pupils and in the number of schools, there have been no increases during recent years. The number of pupils registered in the white elementary grades is now 218,922. Three

*Prepared by A. M. Hopper.

years ago there were 226,069 pupils. The present number of elementary schools, and this includes elementary departments in high schools, is 958. Two years ago the number of elementary schools was 1,047. The decrease in registration has been caused by a decrease in the birth rate of white children in Louisiana. The number of schools has decreased because of consolidations that have been made possible through improved roads and an expanded system of transportation. The number of schools will probably continue to decrease for some time as the people of the State recognize the advantages of the consolidated school. As the road system is improved, additional consolidations will be made.

The number of teachers in the white elementary school is now 6,839, which gives an average pupil load per teacher of 32 pupils. The teaching load is now much more satisfactory than it has been in the past. While a few teachers have loads that are too heavy and have too many grades, most of the teachers are working under conditions that make good work possible. During the years that the school population was increasing, school costs mounted rapidly; and while increased funds were provided, they were barely sufficient to maintain conditions as they were. Since the increase in the registration has ceased, it should now be possible to make needed improvements.

The prevailing type of organization of the elementary schools in Louisiana is by grades; that is, for the entire day a teacher is in charge of a group of pupils of a single grade or of two or more grades. While in some schools the upper grades are organized on a departmental plan, the grade organization is far more common throughout the State. While there are arguments in favor of both types of organizations, most of the school people in Louisiana now accept the grade organization as the more desirable.

A recent change that is noticeable in many schools is in the organization of the daily program. A few years ago the typical daily program allotted a specified amount of time to each subject included in the program of studies. In many cases, the number of recitations amounted to as many as twenty or more. Today the subjects are grouped by fields

and a specified part of the school day is allotted to each field. At present the most common practice is to divide the school day into four parts, conforming to the four work periods of the day. The social studies, science and mathematics, the language arts, and creative arts and recreation are each allotted one of these periods. While no definite time is provided for the practical arts, they are included in the work of the other fields. The present arrangement promotes pupil initiative in planning, developing, and evaluating the work of the school. During recent years, the elementary curriculum has been enriched by the addition and expansion of health, music, safety, social studies, science, and modern language programs. The instruction has also been made more meaningful to pupils by the use of visual aids, radio, libraries, local materials, school papers, club work, and other activities. Much of the teaching is now organized into units of work based on the needs of the children. The local environment and the experiences of the pupils are utilized in the classroom, thus making the work more vital and interesting.

For the past few years the State has supplied library books to the schools. This service has greatly increased the materials of instruction. The prevailing practice is to place the library books in the grade rooms. This practice developed before the State began to purchase the library books and has continued because in many schools no room is available for a central library. It is now realized that a central library is desirable and many elementary schools are establishing them. The central library makes all of the books in the school available to the pupils of all grades. As new buildings are erected, a special room should be provided for the library.

Probably one of the greatest handicaps to the modern program of elementary education is the size of classrooms. While the materials of instruction consisted primarily of textbooks and the question-and-answer method of teaching predominated, only enough space was needed to seat the pupils. The present program, which includes many types of activities, requires more space. Many of the classrooms

are too small to permit these desirable activities. In plans for future buildings, the size of the classroom should be sufficient to permit the various types of activities that are now considered desirable. These include reading, writing, spelling, drawing, manipulating, seeing, hearing, dramatizing, and construction work of various types. The modern elementary school is concerned not only with the intellectual growth of pupils but also with the emotional, physical, spiritual, vocational, social, moral, political, and aesthetical growth and adjustment of pupils.

The future prospects of elementary education in Louisiana are bright. Beginning on September 1, 1940, all beginning teachers will be college graduates. Supervisors are employed in most parish and city school systems to give the teachers desirable help. Most of the larger schools also have principals who devote much of their time to supervision. If the present trends in consolidation and in the reduction of the teaching loads continue, the conditions under which the elementary schools operate should become very satisfactory.

THE STATE'S PROGRAM OF TRAINING IN TRADE AND INDUSTRIAL EDUCATION*

For practical purposes, trade and industrial education may be said to meet the instructional needs of two groups of people. The first of these is the unemployed group who are planning to enter industry as soon as the opportunity presents itself.

The five State-operated trade schools at Winnfield, Natchitoches, Crowley, Shreveport, and Bogalusa, and the two now under construction at Lake Charles and Opelousas are the State Department's answer in meeting the instructional needs of this group.

There are presently enrolled (day and night) in these five State-operated trade schools, and Delgado and Rabouin (not State-operated) of New Orleans, 4,290 boys, girls, men

*Prepared by E. G. Ludtke.

and women. The opening of the Lake Charles and Opelousas Trade Schools will increase this enrollment by 475, bringing our total to approximately five thousand.

The individuals receiving instruction are preponderantly boys and girls, averaging 17 years of age. Those enrolled in the commerce departments are all high school graduates. We estimate that 25% of those enrolled in the shops are high school graduates, and of the remainder, all but a few are high school drop-outs, chiefly because of the economic conditions at home, with the average degree of intelligence, and possessing, if it can be measured, considerable above the normal amount of ambition.

It would hardly be appropriate to pass on to our next activity without mentioning the standards set up for our instructor personnel. All instructors positively must have had successful experience at the vocation which they propose to teach. We have studiously attempted not only to select instructors having four years of successful trade experience above the apprenticeship stage, but also instructors having this qualification, plus a college degree, with major studies in the field of their profession. However, in the few instances where we have been unable to attract or find such instructors with the dual qualifications, we have selected those with experience, who have had the ambition to pursue technical study of their trade at home in preference to those possessing only the educational qualifications and a degree.

Because of this principle in the selection of instructors, and to take care of the increased number of problems which had at that time begun to show up because of the expanded program of trade and industrial education, we, last summer, embarked upon another activity. This was a summer school session for all instructors and directors employed in our system of trade schools, excepting the New Orleans schools, and most of the instructors employed by the high schools providing instruction in trade and industrial subjects. This session lasted four full weeks and was conducted at the Natchitoches Trade School under the supervision of Mr. H. C. Givens, Director of that Institution.

The purpose of this meeting was twofold. *First*, the acquaintance of our trade-school personnel with a new statement of the objective, plan, and policies of the State Department of Education for the development of our trade schools, and *Second*, a program of training for our instructors, especially some twenty-five new instructors being brought into the program.

This summer school session was the first step in the development of our plan for the enlargement of the State Program of Education for Trade and Industry. Annual organized meetings is the number one item set forth in the plan.

You remember earlier in this paper that we stated that trade and industrial education may be said to meet the instructional needs of two groups of people. The first group, you will remember, and we have just completed a statement of the State's Program in its behalf, was the unemployed who are planning to enter industry as soon as the opportunity presents itself.

The second group is that group which is employed and seeks instruction supplementing the daily employment, thereby assuring permanent employment to those participating because they have kept abreast of their jobs. This is an *upgrading* process and the State's method of handling this phase of trade and industrial education is through the holding of clinics outside the hours of regular employment. All trade schools participate in this type of instruction through the holding of night classes.

Other examples of the State's activity in this type of instruction are the clinics now being held for the advanced training of auto mechanics in Thibodaux, Alexandria, Monroe, and their trade areas. In these three localities three hundred and eighty-five men, ranging in experience from one to twenty years at their particular trade, are taking advantage of this instruction. Some of the men drive in from points as many as eighty-six miles away, and actual figures kept on clinics held in Baton Rouge and Alexandria, lasting nine months, five nights a week, show our average attendance

slightly in excess of 90%. Records being kept on clinics now in operation indicate that percentages of attendance will be equally well maintained.

Then there is the public service training in sanitation and sewage. Due to the constant advancement and improvement in the science of water treatment and operation, the members of the water works profession in Louisiana inaugurated a water works short course to be held annually for the sole purpose of becoming better informed on the latest trends in this field, and improving the standards of the profession. After several meetings of these courses, it was decided that even though these courses were well attended by operators from the larger cities, there was a definite need for an educational and training program which would reach the water plant operators in the smaller communities. Therefore, the Industrial Division of the State Department of Education, co-operating with the State Board of Health, developed a study course embracing the fundamentals of water treatment as related to water plant operation, and employed an itinerant instructor to conduct these courses throughout the State. The men attending these courses represent cities from within a radius of fifty to seventy-five miles of the meeting place. Meetings are held three nights a week.

We might mention that classes are also organized under our administration among the workers of the Standard Oil Company at Baton Rouge; barber science courses, and courses in training firemen are being given throughout the State; several thousand interested in sales activities from the retail stores in New Orleans, Baton Rouge, and Monroe are receiving instruction; a foreman's conference group has recently been completed among the foremen of the Flint Cote Company and also Johns-Manville Corporation, both of New Orleans. These are examples, and are not meant to be a list of our entire activities in this type of training.

Another activity, carried on by five co-ordinators geographically located throughout the State to give us best coverage, and working out of our office, has to do with the placement of students now in school, in industry on a part-

time basis. This work is limited to the larger communities, as it is only here that you will find firms large enough to justify the employment of students for part-time work.

This program supplements the work of our trade schools. Our records show that one hundred and fifty students are placed in different trades throughout the State, working on a part-time basis for which they receive compensation, and at the same time are keeping up with their academic high school subjects, all of which are especially selected to relate to their part-time employment and broaden their knowledge about the vocation at which they are working as apprentices.

Our records show further that in almost one hundred percent of our cases the apprentice working and going to school on a part-time basis, after his graduation from high school is continued on a full-time basis with the firm he has been serving as an apprentice.

We would hardly call this picture of the State's Program of Education in Trade and Industry complete, but it gives an overall idea of our activities.

VOCATIONAL REHABILITATION

The Vocational Rehabilitation Act, approved June 2, 1920, provides for the "promotion of vocational rehabilitation of persons disabled in industry or otherwise, and their placement in employment." The term "persons disabled" is defined as "any person, who by reason of a physical defect or infirmity, whether congenital or acquired by accident, injury, or disease, is or may be expected to be totally or partially incapacitated for remunerative occupation," and by the term "vocational rehabilitation" is meant the return to or establishing in, permanent employment, the person disabled.

Vocational Rehabilitation of the disabled is carried on as a co-operative program by the State with the Federal Government. The State Board of Education is designated as the State Agency to administer the provisions of the Act.

The training of rehabilitation cases, in many cases, involves the payment of tuition to such agencies as the following:

1. Educational Institutions (public and private).
2. Industrial and Commercial Establishments.
3. Tutors.
4. Correspondence Schools.

A client of a state rehabilitation service may be provided with an artificial appliance from matched funds in certain cases.

There are approximately 2600 persons in the State with major physical handicaps. We are now training over seven hundred crippled persons to enable them to become self-supporting. We are returning over one hundred and fifty cripples to gainful occupations each year. We do not consider disabled persons rehabilitated until they are satisfactorily placed in remunerative employment.

Any citizen of the State, 14 years of age, or over, who is unable to secure or retain remunerative employment because of a permanent physical disability, and lack of vocational training or experience, is eligible for vocational rehabilitation service.

VOCATIONAL-AGRICULTURE EDUCATION IN LOUISIANA SCHOOLS*

Louisiana is an agricultural State, and like every other business, farming must continue to readjust itself to the rapid changes in American life. It becomes increasingly important for farmers and farm boys to study how to produce efficiently, where to produce, how much to produce, and how the different lines of production can be fitted into farm business so as to give the most efficient and profitable use of land, labor, and capital.

Our American civilization still revolves around the home, and the farm family will be the unit upon which our permanent system of agriculture must be built. There are

*Prepared by S. M. Jackson

numerous forces at work at the present time to increase both the attractiveness and productivity of the farm home. Here again, the public school is the one agency which has the organization to meet the issue and set up a program to make a worth-while contribution to our rural civilization. Vocational-agriculture education is an integral part of the public school system and has as its purpose to train farm boys and farmers to be proficient in farming. At the present time there are two hundred and six white vocational-agriculture departments and seventy-nine negro vocational-agriculture departments in the public schools of the State. Vocational agriculture is reaching large numbers of those among the rural population who want it, need it, and can profit by it—the farm boys in school, boys out of school, and adult farmers.

The vocational-agriculture teacher offers four types of instruction—all-day, day-unit, part-time, and evening-school. An all-day class of instruction in vocational agriculture is a regular class in the 8th, 9th, 10th, and 11th grades in the high school. Day-unit instruction is a modified form of the all-day type in which pupils pursue the usual public-school courses, but take a minimum of ninety minutes a week in some short-unit course of instruction in technical agriculture, and carry on directed or supervised farm practice in agriculture. A part-time class is composed of out-of-school farm boys between the ages of 14 and 25, regardless of previous education, most of whom are already farming in some capacity, but usually with limited responsibility and are not regularly enrolled in school. An evening class consists of instruction for adults by the vocational-agriculture teacher, giving systematic instruction on any phase of agriculture that may be of benefit to the farmers. The vocational-agriculture program as carried on in Louisiana has proved to be of great value to the farmers and farm boys where the departments are established.

Vocational-agriculture teachers teach the scientific principles and practices of agriculture based on the individual and community needs of the students. Agricultural practices are improved by teaching efficient farm organization,

the adjustment of crops and livestock according to the agricultural outlook, low cost production practices, efficiency with labor, control of waste, standardization of products, and proper preparation for the market. Orderly marketing, sound financing, conservation of natural resources, long-time planning, and improved practices are carried out on the home farm of the student who is taught to farm in a business-like manner. Vocational-agriculture teachers stress the live-at-home program and the beautification of the homes, churches, schools, and other buildings by use of natural shrubbery. They also aid in the successful establishment of young men in farming.

As most homes and farm buildings are constructed by the farmers and practically all repair work is done by farmers and farm boys, the teachers of vocational agriculture give instruction in farm-shop skills. Farmers and farm boys should know how to use common farm tools properly in making the necessary repairs at home and on the farm. When these jobs are done in the proper way, thus giving attractiveness and conveniences, the real-estate value of the farm is increased.

Commercial gains are not the only ones derived from work done by vocational-agriculture teachers. They are raising the standards of citizenship by sponsoring a wonderful organization of boys known as the Future Farmers of America. This is a national organization of farm boys studying vocational agriculture in the public secondary schools under the provisions of the National Vocational Education Acts. It was started in Kansas City in November of 1928, and has grown steadily. At the present time there are more than 226,000 active members in the United States, Hawaii, and Puerto Rico.

The primary aim of the Future Farmers of America is to develop agricultural leadership. Other purposes include strengthening the confidence of the farm boy in himself and in his work, creating interest in a more intelligent choice of farm occupations, creating and nurturing a love of country life, improving the rural home and its surroundings, encouraging co-operative effort, promoting thrift, improving

scholarship, encouraging organized recreational activities among rural people, and training for good citizenship.

The Future Farmers of America is a non-profit organization of voluntary membership designed to take its place among other organized agencies striving for the upbuilding of agriculture and country life through emphasizing good citizenship and efficient farming programs.

Activities carried out by the Louisiana Association of F. F. A. have been successful to the point that for the past six years, the Office of Education and the National Organization of F. F. A. have recognized the Louisiana Association as the outstanding State Association in America. In 1933 the State was awarded a plaque and loving cup for having the best state association. In 1934, 1935, and 1936 the State was second. In 1937 it again received a plaque and loving cup for having the best state association in America; and in 1938, the State was third.

Training Future Farmers for the vocation of farming is sound and practical and is of State and Nation-wide importance for this and for future generations. Now is the time of all times when agriculture instruction for farm boys and their parents can, and will, count most. Vocational-agriculture education offers definite and systematic instruction for the farmers and future farmers. To complete the program in agricultural education in Louisiana, a department should be established in each rural high school. Facilities should be provided for carrying on farm-shop instruction and all other phases of the vocational-agriculture program in the public schools. The agriculture classroom and farm shop should be large enough in size to care for the students in each class, giving them the proper floor space. Equipment for both classroom and farm-shop instruction should be provided for each student and ample references for the department library. Equipment should be purchased as needed by the teacher of vocational agriculture and should be determined by the program of work set up. Recommended classroom and farm-shop plans, as well as recommended equipment and references, may be obtained from the Department of Education. It is our desire to give

to the farm boys and farmers of this State the opportunity to learn how to be proficient in farming.

Let us always be reminded of the statement of Daniel Webster, who said, "Let us never forget that the cultivation of the earth is the most important labor of man. Unstable is the future of that country which has lost its taste for agriculture. If there is one lesson in history which is unmistakable, it is that national strength lies very near the soil."

HOME-ECONOMICS EDUCATION*

Among the attainments pointing towards wholesome progress are co-operative effort of school officials, principals, and teachers, in planning and carrying out the homemaking program, travel allowance for home visiting, conference period in daily schedule, a better understanding of learning experiences in terms of daily living, and a recognition of the values coming through home-economics education for boys and girls and out-of-school groups. The travel allowance for home visiting and supervising home projects enabled teachers to get a better understanding of people and home problems, which, in turn, brought about the use of more practical learning experiences and improved instruction. Contacts with parents and children in the home developed a sympathetic understanding and more unity of effort in planning and guiding educational activities in home-making.

Another significant development was the special conferences for studying teacher-training problems, which brought an excellent response from the University and all colleges responsible for preparing home-economics teachers. The supervisors, directors of home economics, methods teachers, and supervisors of student-teachers worked together in a two-day conference in September and for one day in February. The latter meeting was devoted to evaluating progress in goals proposed for pre-service and in-service training, and to the study of curriculum problems in colleges.

*Prepared by Clyde Mobley.

Four district conferences for teachers were held for two days each at the University and the three State colleges. Three hundred and forty-seven home-economics teachers, members of the home-economics staff from the colleges and the University, and members of the Home-Economics Division participated in these conferences.

Major emphasis was placed on improving instruction and planning programs of work.

Federal and State funds for vocational education were used to reimburse 53 parish school boards for part of the travel and salary of 234 white home-economics teachers in 226 day schools, 74 evening schools, and one part-time school.

In all types of white schools offering home economics, there were enrolled 24,744 high-school girls, 6,102 girls in elementary grades, 2,685 boys, and 2,423 girls and women in adult classes, making a total of 35,954 people in the home-making program. Evening and adult classes were conducted by 91 teachers in 119 centers in 41 parishes. The part-time program in Natchitoches reached 125 to 135 girls who were employed by the National Youth Administration for special jobs on the Normal College campus. More and more home-economics teachers are meeting with success in organizing classes for out-of-school girls between the ages of 16 and 25 who are unable to attend college or secure employment.

The Supervisors from the State office, the District Supervisor at Louisiana Polytechnic Institute, and the part-time itinerant teacher-trainers at Louisiana State University and Southwestern Louisiana Institute, made 375 visits to 328 high schools and 119 centers for evening and part-time classes. This is the first year it has been possible for all home-economics departments to have a half- to a whole-day visit from a supervisor. Reports and conferences with teachers, principals, and superintendents indicate that there is a splendid attitude toward supervision. Increasingly, home economics is gaining recognition for its specific values to education for home and family life, and its contribution to the total education program.

In the specific supervisory activities attention has centered on the constant goal of improving instruction. Particular attention was given early in the year to assisting all first- and second-year teachers in planning functional programs. Programs, goals, and activities for attaining desired results were planned with teachers. Conferences were held with teachers, principals, and superintendents for the purpose of strengthening relationships, evaluating the progress of programs, and assisting teachers to understand better home economics as a part of the total education program. Specific improvement observed in the method of teaching has been in guiding pupils toward self-directed activity.

Teachers in the 226 Federal- and State-aided schools have visited 12,800 homes. Reports from mothers and teachers concerning home projects give evidence that the 33,325 home projects and 13,657 home-practice activities have improved the living conditions and the personalities of the girls. The scheduled conference period for the supervision of home projects, and the opportunity of the teacher to visit in the homes of the girls have been the outstanding factors reported for bringing about a closer relationship between the home and the school. Homemaking programs have operated for ten months in 102 communities. The increased number of summer programs and a better understanding of the program by parents has created an attitude that is conducive to growth of departments, and to better planning of programs for solving daily living problems.

Homemaking instruction has been offered to 2,685 boys in 76 Federally reimbursed schools and 24 non-Federally aided schools. Reports and talks with boys, teachers, and principals indicate that there is an increasing demand from the boys for regularly scheduled classes in certain phases of home economics.

The Junior Homemakers' organization shows steady growth. The annual State meeting held in November had an attendance of approximately 3,000. The increasing number and quality of parish-wide programs indicate that supervisors and teachers are attaining good results in developing

initiative, leadership, and fellowship. Two hundred and eighty-two high-school and six college clubs affiliated with the American and Louisiana Home Economics Associations, with a total membership of 14,259. The Standard of Excellence was reached by 99 clubs. There were 35 parishes in which all Junior Homemakers' Clubs reached the Standard of Excellence. Forty-three high-school girls and 14 college girls represented Louisiana at the American Home Economics Association meeting in San Antonio in June. Hope Morrison, Haynesville High School, National Chairman of Clubs, presided at all meetings for high-school clubs. Seven of Louisiana's girls served on the program and made excellent contributions. National leaders in home economics continue to point to the Louisiana Junior Homemakers' organization as the most outstanding in the United States.

Parents' meetings, mother-daughter, father-son suppers, and "open house" meetings continue to be an accepted part of the homemaking program in most of the schools. These meetings planned by the girls under the supervision of the teachers were attended by 15,545 parents. The purpose of these meetings is to foster friendly relations between the home and the school, and to give parents a better understanding of the homemaking and school programs.

The building program and improvement of equipment have been in keeping with development of the total school program. Superintendents, principals, and parish school boards have co-operated with the Home-Economics Division in making plans for more homelike departments, and have brought about marked improvement in teaching situations. Cottages have been built or remodeled in 19 schools. New departments have been included in 16 new school buildings. Annual reports show that \$19,030.49 has been spent for improvements in furnishings and equipment this year.

Home-economics supervisors and teachers have participated in the State-wide curriculum study, which is under the guidance of a State Director in the State Department of Education. The experiences obtained in the home-economics curriculum study during the past seven years have been helpful in bringing about desirable correlation in many

fields. Two teachers are in the experimental schools where exceptional progress is being made in "trying out" democratic procedures in directing learning experiences.

Home-economics teachers have co-operated with other teachers, particularly in agriculture and science, in an exchange of classes for the purpose of giving girls and boys enriched learning experiences in fundamental aspects of personal and home living. This activity is valuable to both teachers and students in that it brings about desirable interrelation and integration in terms of needs.

HOME-ECONOMICS EDUCATION FOR NEGROES

All high schools having home-economics departments were supervised by a well-qualified person, who planned the supervisory program with the Supervisor in the State Department of Education. Visits were made to all day schools and evening classes for the usual supervisory activities needed for improving instruction and teaching situations. Of the 49 high schools visited, 36 were approved for reimbursement from Federal and State funds. Homemaking and maids' classes were taught in 31 schools.

In the Negro schools offering home-economics, there were enrolled 3,322 girls, 844 women, and 469 boys, or a total of 4,635.

Reports from the State Agents, parish superintendents, and supervisors, and observations of home-economics supervisors indicate that normal progress is being made in the total program. Teachers seem to be better prepared, and more willing to follow suggestions for improving teaching and learning experiences. Practically every home-economics teacher attended the special one-week conference held in conjunction with summer school at Southern University in July, 1938. At this conference directed by the District Supervisor and assisted by the home-economics faculty in Southern University, all teachers participated in discussions, and in planning school and community programs, home projects, home visits, maids' courses, and classes for adult homemakers, and ways of evaluating progress. Emphasis was

placed on the use of practical learning experiences in terms of interests and needs of individuals.

Under the leadership of the District Supervisor and high-school teachers, the home-economics clubs completed a State organization at the first annual meeting in April of this year. Approximately 300 girls from 42 schools paid club dues and participated in the meeting, adopted a state constitution, and the state name of Progressive Homemakers.

HEALTH AND PHYSICAL EDUCATION*

During the session 1938-39 continued progress has been made in the development of the Health and Physical Education Program in the Louisiana schools.

Health Education: The latest report from the State Board of Health shows that forty-three Health Units, including Orleans Parish, are in operation in the State. Several other parishes in the State are planning the organization of Health Units, and it is hoped that in the future all the parishes in the State will have Health Units. Parishes of Jefferson, East Baton Rouge, Ouachita Parish High School, and City of Lake Charles have employed full-time nurses to do health-education work in the schools. Through the facilities of the Health Units and the co-operation of the family physicians and dentists, school children are being examined for physical defects, and preparations are being made to bring about necessary corrections. An improved program in the teaching of health in the public and private schools of Louisiana is evidenced at the present time. In the high school, *Everyday Problems in Health*, by Wheat and Fitzpatrick, has been adopted as the textbook and made available to all high-school children. Other materials are obtained from the Metropolitan Life Insurance Company, State Board of Health, and United States Public Health Service. Every effort is being made in the teaching of health to make the program practical in the life of the child.

*Prepared by Jess W. Hair

Physical Education: The annual reports received by the State Supervisor of Health and Physical Education show that all high schools are meeting the minimum requirements of an organized Program of Health and Physical Education set up by this Department. These reports further show that many improvements have been made in the playgrounds and in permanent and portable equipment, as well as the addition of play space. Various figures available from these reports show that within the last five years approximately 225 gymnasiums and gymnasium-auditoriums have been constructed for the public schools and colleges of Louisiana. While there have been only four swimming pools constructed in the high schools and colleges of Louisiana, several towns have constructed swimming pools adjacent to the school plants which can be utilized during school time and vacation period.

The recent building program on the part of the State colleges is making possible first-class facilities in the training of teachers for health and physical education. Continued expansion in the courses in health and physical education in the extension field are being offered by the teacher-training institutions. This is making possible considerable improvement in the teaching personnel in the field of health and physical education. At the present time approximately 100 teachers are giving from three-fourths to full time in the instruction of health and physical education in Louisiana high schools. Many other teachers are working on half-time basis in this field. Continued use of *Physical Education for the Elementary Schools*, by Neilson and Van Hagen, improvements in the library facilities, and the addition of a second issue of the Health and Physical Education Manual by the State Department of Education have placed in the hands of teachers adequate materials for health and physical education instruction. School boards are budgeting more funds for portable and permanent equipment which makes possible a well-rounded program for each child in the health and physical education program.

Over the past year major emphasis has been placed on sight conservation, tuberculosis control, and first-class sani-

tation in the schools. While not every school is completely sanitary in every respect, continued emphasis is being placed at each school on having a pure and abundant water supply as well as sanitary toilets.

Safeguards have been placed around children in the use of playground equipment so that accidents may be reduced to a minimum. Improved instruction in first aid in the seventh grade and in the high school has made it possible for hundreds of children to receive first-aid instruction of the first order.

At two schools, Fair Park and Byrd, an improved program in the Junior R. O. T. C. is in good working order and at the present time is training approximately 800 boys.

The State Department is urging the employment of more full-time teachers. It is recommended that each high school with an enrollment of 100 or above whose school plant affords gymnasium facilities should schedule health and physical education on an hour basis, giving the boys and girls classes on alternate days. It is possible through this type of organization to render a superior type of instruction given in smaller groups.

While we are not satisfied with the development in the health and physical education program, we are reasonably well pleased to accept the progress made over the past year and we are looking forward with constant expectation that more rapid progress will be made in the future.

REPORT OF THE MUSIC DIVISION*

The Music Division of the State Department of Education has completed its sixth year of existence. During the year just past, seven additional parishes in the State organized music programs in the parish schools, making a total of fifty-seven parishes in Louisiana which now enjoy a school-music program.

This Division has been active in the promotion of music throughout the entire school system. It has supervised the

*Prepared by Lloyd Funchess

instruction of music on all levels, and has aided the State Music Association in its organization of musical festivals, meetings, and special programs.

During the month of October music conferences were held at Southwestern Louisiana Institute, Louisiana State Normal College, Louisiana Polytechnic Institute, and Louisiana State University, at which more than ninety-five per cent of the music teachers in the State received special inspiration and instruction from nationally known leaders.

The Music Division has assisted the State Association in organizing ten music festivals at which more than 15,000 high-school students participated. Because of the successful program of music in Louisiana the National Band, Orchestra, and Vocal Associations held a regional music festival in Shreveport on May 10 and 11. The State Band Festival at Alexandria was one of the largest and most successful held in the State. At the present moment there are 247 music specialists employed by parish school boards for the purpose of teaching music in the schools. There are 200 bands in the schools, 379 glee clubs and mixed choruses, as well as other types of musical organizations too numerous to mention.

National Music Week is a significant event in Louisiana. In 1939 forty cities in Louisiana celebrated the entire week with daily concerts suitable to the occasion. The newspapers published 191 news items as well as 13 additional editorials dealing with the value of music. Mayors of five cities issued National Music Week proclamations.

During the past year the State program of music in Louisiana has been the subject of two articles in the national publication of the Music Educators National Conference. As a result of those articles and the high quality of work being done in Louisiana in music, there have been received inquiries from more than 24 states as to the organization of the music program in Louisiana.

Physical facilities for the teaching of music have been provided in practically all new school buildings constructed during the past two years. At the four colleges under the jurisdiction of the State Board of Education, excellent music

buildings, well equipped, have been constructed. In each institution, additional members have been employed on the music faculty to meet the demands for more music on the part of students. During the present season it is indicated, for the first time since the music program was inaugurated, that a sufficient number of music teachers will be graduating from our colleges to meet the demands for positions.

The excellent co-operation of parish superintendents, school principals, and others engaged in the public-school field has always been of the highest type. The fine spirit, the willingness to improve a given situation, and the hearty reception given members of this Division during their visits are worthy of only the highest praise. It is through such wisdom on the part of school people that we shall continue to grow.

SCHOOL LIBRARIES*

The school library is primarily a service agency. Its service should reach every department and classroom of the school, and every extra-class club and group. Its service should be extended to every child in his personal interests and hobbies, his classroom work and studies, his recreational readings; and to every teacher in planning his work and enriching his teaching materials. The tools of service are books, magazines, newspapers, pamphlets, pictures, maps, and visual aids. The library is essential to the school which is teaching children, instead of teaching subjects from textbooks.

The librarian is the most important single factor in the successful functioning of the library. Through her knowledge of books and her familiarity with the work of the school, she is able to select wisely materials to fit the various needs. The librarian must so organize her library materials that they will be readily available. The library should be so administered that it is an inviting, attractive place, conducive to reading and study. Courses in library science equip librarians for the work which they are called upon to do. State standards of certification for high-school librarians

*Prepared by Lois Shortess

ensure qualified personnel. High schools are required to have librarians with 6, 12, or 24 semester hours' training in library science, depending upon the size of the school. The number of librarians with training in library science has increased remarkably since these standards were adopted in 1929, as shown by the table below:

HIGH-SCHOOL LIBRARIANS IN LOUISIANA

Number of high-school librarians in service having

	6-11 semester hours' training	12-23 semester hours' training	24-30 semester hours' training	Total
1929-30.....	5	14	0	19
1930-31.....	66	11	5	82
1931-32.....	86	20	12	118
1932-33.....	74	34	12	120
1933-34.....	70	32	26	128
1934-35.....	76	38	33	147
1935-36.....	101	41	40	182
1936-37.....	133	62	69	264
1937-38.....	137	76	86	299
1938-39.....	151	95	102	347
1939-40.....	167	86	112	365

The second important factor in the library is the book collection. Ten years ago many high-school libraries consisted largely of books for English collateral reading. As instruction improved, the scope of the library has broadened. The library of today must have books for ready reference, books to supplement the work of all classes, books for use in outside activities, books for recreational and informational reading along all lines. The financial problem of providing books was formerly a serious one. In 1936 the Legislature passed an act, which later became a constitutional amendment, providing for State purchase of library books. The first such purchase, in 1936-37, amounted to

approximately \$250,000; the second, in 1938-39, to \$350,000; and the third, in 1939-40, to \$300,000. Each white school, in the 1939-40 purchase, received one book for each two pupils, with certain minimums for small schools. Each school makes out its own book order, keeping within the quota assigned the school. All orders are checked and approved in the Library Division of the State Department of Education. Purchase and distribution of the books is done through the State Printing Board. Needless to say, the book holdings of the school libraries have increased materially within the past three years, so that more and better reading is being done.

Keeping library books in good physical condition is usually a serious problem. This difficulty has been largely overcome in Louisiana by the establishment of a Statewide WPA bookbinding project, in 1936. Sponsored by the State Department of Education, which buys all the supplies and equipment, there are 35 binding units in the State. Until the summer of 1939 both textbooks and library books were rebound. Since that time, in compliance with a Federal ruling, only library books have been eligible for binding. In the fall of 1939 every parish without a bookbinding unit was assigned to a unit in a neighboring parish, so that now every school has access to the services of a project. Parish school boards provide for the project a room, furniture, heat, light, gas, water, and other utilities. The local high-school librarian serves as technical supervisor. Excellent binding has been done in all the projects, and thousands of books which otherwise would have to be discarded have been salvaged and made attractive for use. From the beginning of the work to September 30, 1939, 137,636 school library books were rebound by these projects.

Next in importance to the librarian and the books is the library room. In the many new buildings which have been constructed recently, ample provision has usually been made for the school library. Blueprints of proposed buildings are checked in the Library Division and recommendations made, when necessary, to assure adequate space. In old buildings many partitions have been moved and remodel-

ing done to give the library the space which its service warrants. School boards are now more generous than formerly in providing attractive and adequate library furniture and equipment.

The development of libraries in the elementary schools has been slower than in the high schools. Classroom libraries are the rule, as they have been for the past ten years, but with the program for the improvement of instruction is coming a realization of the need for better elementary-school libraries. Teachers and school administrators are coming to believe that the elementary school, as well as the high school, needs and deserves school library service. Classroom collections of books are found to be inadequate for the many and varied demands of teachers and pupils. Teachers do not have the filing space nor the time to build up the pamphlet, picture, and clipping collections so valuable to the work of the school. Classroom collections tend to cause much extravagant duplication of books and other library materials in a school.

A number of elementary schools within the past few years have established centralized library collections, provided library rooms, and a few have employed trained librarians. Here the pupils and teachers have access to a much wider range of reading and reference material, duplication of materials is kept to a minimum, and all material is available to every teacher and pupil in the building. A librarian in an elementary school, as in a high school, can organize the materials for service, can confer with teachers in regard to library materials available in connection with their work, can train pupils in the use of books and library tools, and can give reading guidance. There seems no doubt but that the next five or ten years will show the expansion in elementary-school libraries that has occurred in the high-school libraries in the past years.

During the last seven years there have been very active library committees of the Louisiana Teachers Association. These committees have made studies of elementary library conditions and standards, and have made recommendations for the improvement of conditions. The 1939 committee,

basing its work on the studies and recommendations of the previous committees, did an excellent piece of work in recommending revision of school library standards with emphasis on centralization of elementary-school libraries. It is to be hoped that many, if not all, of these recommendations will be adopted as standards for the schools to follow.

Negro library service has improved remarkably since the inauguration of the plan for State purchase of library books. Libraries in Negro high schools are being built up according to the plans used in the white high schools. Service to the Negro elementary schools, however, is on a different basis. A centralized collection of elementary books has been established in nearly every parish. Books from this central library are circulated to all the elementary schools of the parish. Collections are made up for each elementary school, based on enrollment and needs, and go to the school in a locked wooden box which can be set on end to form a small book case. These collections are changed at regular intervals, usually every month. Each parish collection is in charge of a Negro librarian or teacher-librarian who has had at least one summer's training in library science. Books to be sent to the parishes have been chosen each of the past three summers by committees of Negro librarians. The books are serving a real need in the schools, and doing much to stimulate reading and study.

The school library program in Louisiana has progressed steadily. The ideal in school libraries and library service is far from being reached, but with the interest being taken by superintendents, supervisors, principals, and librarians future improvement seems assured.

DIVISION OF SAFETY*

Since the last annual report much progress has been made by the school authorities of Louisiana in the field of safety in transportation, care of school buildings, and in the safeguarding of the lives of the children in and around school buildings. It is with much regret, however, that the Department announces one fatality in transporta-

*Prepared by E. P. Roy.

tion during the 1939 school session, the first since the organization of the Division of Safety—a period of two and one-half years.

Remarkable progress in transportation has been made since the last report of one year ago. Of the 2530 school busses in operation, there were some 200 of steel design. Today the Department is happy to announce that of the 2530 school busses in operation some 1150 are of safe, steel design. Practically all of these steel bodies were manufactured in the State of Louisiana and constructed by Louisiana people at a cost of 50% less than for the same equipment purchased outside of the State, affording the school boards and the school bus drivers of the State a saving on the purchase of these bus bodies of approximately \$400,000.00. Every parish in Louisiana with the exception of one has entered into the replacement program, and it is believed that by the beginning of the 1940-1941 school session practically all wooden bodies will have been replaced with safe, steel bodies. This will safeguard the lives of the 150,000 school children who are transported daily to and from school, at a total saving to the school authorities of the State of approximately \$1,000,000.00, and will give to the school children of the State one of the finest and safest transportation systems in any state in America.

The National Council of Chief State School Officers, realizing the necessity for uniform transportation throughout the Nation, sponsored a conference of official representatives of the forty-eight state departments of education which was conducted at Columbia University in the City of New York in April of 1939, for the purpose of formulating national uniform minimum standards of school bus construction in both the body and the chassis. As a result of this conference standards for uniform school bus body and chassis were adopted. The State Board of Education of Louisiana adopted these standards in the month of May, 1939, and these uniform school bus bodies are being manufactured in Louisiana and furnished to the school bus drivers of Louisiana at this time. Therefore, it is recommended that the school authorities of Louisiana continue

the program of replacement of all wooden bus bodies with steel, so that by September of 1940 practically all wooden bus bodies now in operation will have been replaced with safe, steel bodies.

SCHOOL BUS DRIVERS

During the latter part of 1939 a *Handbook for School Bus Drivers and School Officials* was prepared for the purpose of providing definite material relating to the safe transportation of pupils. The school bus driver or the operator of a vehicle transporting pupils to and from school is charged with an important duty. In his custody are placed the care and safety of the pupils he is transporting. A mistake or error in judgment in an emergency may cause serious injury to the pupils or even result in death. This Handbook discusses the qualifications of school bus drivers, rules and regulations in the operation of a school bus, contractual agreements, approved operating rules, instructions to pupils, instructions to parents, inspections, procedure in hiring school bus drivers, and the organization of school bus patrols. The parish school boards have improved the standard of efficiency by exercising a great deal of care in the selection of their school bus drivers. Through this interest of the school boards and the co-operation extended the boards by the school bus drivers, the school authorities have been able to reduce the number of fatalities occurring in transportation to practically none and to considerably reduce the number of accidents.

SCHOOL BUS PATROL

For all school busses operating in Louisiana there have been organized what are known as school bus patrols for the purpose of assisting the school bus drivers in transporting children safely to and from school and in warning the general motoring public to be careful in passing school busses. Through this project alone we have been able to reduce the number of children killed while en route to and from school in school busses from fifteen or more each school session to only one death in two and one-half years. The school

authorities and the general motoring public have fully co-operated and, by all means, this system should be continued.

JUNIOR SAFETY COUNCIL

Nearly every school in the State has organized a Junior Safety Council, which is a student activity designed to show the students how organized safety efforts may be carried on and to teach them safety. The purpose of the Junior Safety Council is to organize pupils on a self-governing basis for the practice of safety; to effect the training of pupils by providing opportunities for the study of accident situations, causes and preventions, leading to the formulation of rules and safe practices; to reduce the number of accidents occurring to children at school or home, on the street, and on vehicles; and to effect one aspect of training for citizenship. It may be safely assumed that the pupils will be deeply interested and will do their part satisfactorily in the councils if they are guided wisely by principals and teachers.

INVENTORY AND SCHOOL PLANT INSPECTION REPORT

All school buildings are now regularly inspected for fire hazards and other hazards and the report of the inspection is made on forms furnished by this Department. These inspections have resulted in a considerable reduction in the number of fires and injuries occurring in and around school buildings.

DRIVER EDUCATION AND TRAINING COURSES

Several parishes have adopted driver education and training courses in all the high schools of the parish and other parishes have adopted the program partially in some of the high schools. Driver education and training courses give to the thousands of high-school students the opportunity to learn the fundamentals of good driving. As the student reaches legal driving age he learns the proper attitude in the operation of a motor vehicle. The student

is taught good habits before he can acquire bad ones in driving an automobile by the "hit and miss" method.

Adult Driver Training is also being conducted in co-operation with the Works Progress Administration, giving certain adults an opportunity to learn to drive a car in a safe manner.

RECOMMENDATIONS

It is recommended that the safety program as inaugurated throughout the school system of Louisiana be continued. As a result of this program the lives of some thirty-five of our school children have been saved in two and one-half years, certainly justifying the small amount of money appropriated for the purpose. And it will be well worth the appropriation of additional funds to extend the program into other phases of safety. Not only should the replacement program be continued until its completion, but a thorough transportation survey should be made by each parish school board for the purpose of eliminating unnecessary school bus routes and, thereby, reducing the cost of transportation and effecting a sufficient saving to pay the school bus drivers salaries commensurate with the amount and importance of their services to the school boards. It is further recommended that serious thought be given to the parish ownership of all school bus equipment. This would effect further economy on the part of the school boards, and it is firmly believed that the total of \$2,000,000.00 per year for the operation of the school transportation of the State can be reduced to approximately \$1,500,000.00.

DIVISION OF NEGRO SCHOOLS*

The Division of the State Department responsible for the direction of the education of Negroes was created in 1916 to study the needs and give purpose and direction to the program of Negro education; to represent Negroes in councils, legislative bodies, administrative boards, and all places where they cannot or do not go; to keep in close touch with situations and know to what extent local public

*Prepared by A. C. Lewis.

sentiment will support helpful measures for the Negro race; to encourage Negro people and lead white people to do things which should be done for the good of both races; to point out to the proper authorities among the white people injustices, discrepancies, and lack of opportunities for Negroes; to do all it can to remove the sense of inferiority and to establish an attitude of self-respect in the minds of the Negroes; to create an interest in and appreciation and understanding of the problems and seek solutions that will result in better educational advantages for Negroes; to disseminate information concerning the educational needs of Negroes and to institute plans and policies that promote the general advancement of the Negro school program.

The Division has not attempted to develop the educational program any faster than public sentiment in the various parishes would approve. The general policy has been to take one step at a time. In all of the parishes the program has developed in proportion to the interest of the local school officials.

The position has been accepted that it is necessary to begin working with people where they are, physically, socially, economically, and educationally. An attempt has been made to develop a school program that will raise the standard of living and improve environmental conditions. As a result of plans and policies instituted by the Division, the program of Negro education has been reorganized and redirected in a manner deemed most likely to serve the Negro population. Since most of the Negroes are engaged in agricultural pursuits, the policy is not only to consolidate schools and erect buildings in the centers of population but to provide decent school facilities in rural areas where the people live.

One of the problems that challenge education is that of developing an honest and fair-minded attitude toward all racial groups. An important purpose of education is to prepare groups of people to get along together and to fit themselves to live in the same country harmoniously,

helpfully, and happily. Negroes constitute more than one-third of the State's population. By no principle of economics or ethics can a state progress or reach the highest stage of development with a large proportion of the population unskilled, shiftless, ignorant, and diseased. Neglect of the Negro and indifference to his home life, his health, his education, and his training for useful and gainful employment are detrimental to public welfare. Ignorance is not the cure for any ill. The Negro is either an economic asset or an economic liability. The progress of the state depends upon the education of all its people.

The Division has been responsible for the administration of special funds made available to Negro schools by philanthropic boards. It is the responsibility of the Division to co-operate with all social public-service agencies which have for their purpose any phase of general education. The members are called upon to advise with school officials in locating and planning school buildings, making studies, arranging salary schedules, holding conferences, conducting institutes, organizing, planning and supervising summer schools, and expanding parish programs of Negro education. They are responsible for the co-operative development of curricula, supervision of all departments in rural schools, elementary schools, high schools, normal schools, and colleges. Other divisions of the State Department co-operate and render some assistance.

During the years since 1916, public sentiment has developed which will support much better school facilities for Negroes than we now have. As evidence of this growing favorable sentiment, a dozen parishes have already provided for adequate school facilities. The State has neither schools enough to accommodate the Negro children who should be in attendance, nor educational offerings of the quality and variety adapted to their needs. In a large majority of the parishes, more than half of the Negro schools are operated in old church buildings or dilapidated halls, with insufficient light, poor heating, little or no equipment, and with few of the comforts of a decent classroom. In most instances, school terms are short, many teachers

are poorly trained, and the majority of them are underpaid. Classrooms are overcrowded and additional space and teachers are needed. About twenty parishes have no public-school facilities above the elementary-school level. With few exceptions, the only adequate physical plants are the Rosenwald buildings erected several years ago with the assistance of the Julius Rosenwald Fund, and a majority of these are being neglected and permitted to deteriorate. At least one thousand new school buildings are needed in the State at the present time.

In spite of the fact that school revenues have materially increased in the last few years, the fact remains that the total amount spent during last session in the Negro schools is only a little more than the amount spent in 1928-29, which means that the Negro schools are getting a smaller percentage of the total school funds as the years pass.

Twenty years ago practically all of the teachers were untrained. At the present time, through the facilities of Southern University, the Normal School at Grambling, and private institutions, the majority of the teachers are professionally trained, and have had two or more years of college work. The greatest progress made in Negro education has been in the quality of teacher-training in the improvement of instruction, and providing libraries. These improved conditions have been brought about largely by the effective work of thirty-seven well-qualified and efficient Negro supervisors and about twenty-five white supervisors who are giving part time to Negro schools.

A great deal of sincere co-operative effort is characterizing the study of the school program for Negroes in Louisiana. Curricula on all levels—colleges, high schools, elementary schools, and rural schools—are being reorganized and redirected, with special adaptations to meet the needs of Negroes.

Additional funds are necessary in order to remedy the inadequacy of educational opportunities for Negroes. Better facilities, longer terms, higher salaries are necessary. The minimum standards for Negro schools recom-

mended by State Superintendent Harris are in the interest of the social and economic welfare of the State. The State should provide a training school for delinquent Negro boys and girls and at least one trade school for Negroes.

CERTIFICATION DIVISION*

In respect to certification and to certificate standards, Louisiana is at present passing through a period of transition.

For several decades we have been measuring our progress in respect to scholarship of teachers by the widely approved standards of two years of college training for elementary-grade teachers and 4-year college degree for high-school teachers. On the basis of these standards the scholastic status of our teachers for the session of 1937-38 was 94½% of our elementary-grade teachers with 2 years or more of college training, and 97½% of our high-school teachers with the baccalaureate degree or better.

On September 1, 1940, our new requirements go into final effect. On and after that date no new certificate will be issued on less than the baccalaureate degree, and our progress for the future will be measured by the rise in the percentage of elementary-grade teachers who show the degree. The speed with which this rise in the percentage of degree holders among the elementary-grade teachers has been going on in recent months is the result, in part of the currently prevailing impression that the elementary-grade teacher should be expected to meet scholastic standards as high as those of the high-school teacher, in part of the emphasis on scholarship in the new salary schedules without regard to the level on which the teacher serves, and in part of the fact that many teachers who had the degree had neglected to have their certificate records brought up to date until the pecuniary advantage of scholarship now shown in the salary schedules was brought to their notice.

Even the influence of Tenure is hardly likely to impede the rise of scholarship among the elementary-grade teachers so long as financial advantage is joined with the other influences favorable to such advancing scholarship.

*Prepared by J. E. Lombard

During the past year there has developed both a sectional and a National consciousness of the growing need for common standards of certification such as will reduce the interstate friction in certifying teachers who obtain their college training outside of the State in which the teaching service is to be rendered.

The Louisiana State Board of Education has removed most of the friction so far as Louisiana is concerned by authorizing the issuing of a certificate valid for one year to an applicant who meets the requirements for a certificate in any other state and is deficient only 6 semester hours or less of meeting the Louisiana requirements, on condition that the applicant agrees to make up the deficiency promptly. This action appears to be a constructive move that achieves the desired result of removing friction and lowering the interstate barriers without lowering any of Louisiana's desirable certification standards.

PROFESSIONAL AND SERVICE PROJECTS OPERATED IN CO-OPERATION WITH THE WPA OF LOUISIANA*

The State Department of Education operated several projects in co-operation with the WPA of Louisiana. In these projects the State Department of Education acts as sponsor on a State-wide basis. The WPA employs all labor and the State Department of Education co-operates by supplying a portion of the materials and supplies needed in the operation of the projects.

During the 1938-1939 session, the projects thus sponsored were the Bookbinding Project, the Adult Education Project and the Nursery School Project. In each of these projects the local parish school board and various community organizations act as co-sponsors. The major portion of the sponsor's contribution in each case comes through the co-sponsors in the way of rental of buildings and equipment, and in the supplying of materials for the operation of the project. The chief contribution made by the State Department of Education consists of materials for use in the Book-

*Prepared by M. S. Robertson.

binding Project, textbooks, and the salary and expenses of the state director of the education projects.

During the current school year the State Department of Education has sponsored on a State-wide basis five WPA Professional and Service Projects. These are the Book-binding Project, Adult-Education Project, Nursery-School Project, Recreation Project, and Assistance to Public Schools (hot lunch program). The projects this year are co-sponsored by the parish school boards and community organizations. The sponsor's contributions made by the State Department of Education consist of the same items mentioned above with the additional item of expenditures for food which went into the hot lunch program. This contribution was made through the parish school boards from their hot lunch school funds.

Table I shows the essential facts relative to the five WPA State-wide projects up to January 10, 1940.

*Hot Lunch Program.

Adult Education: Considerable emphasis has been placed on the Adult Education Project. The major work is in the field of literacy education. An effort has been made to enroll every illiterate in the State and to offer some instruction in reading and writing to the unfortunate people who were deprived of education in youth. The adult-education program, however, includes several other fields of instruction because it is not always possible to find illiterates in the same communities where needy, unemployed teachers are found.

Table II shows the essential facts relative to the adult education program during the 1938-39 session.

TABLE II. FIELDS OF WORK, TEACHERS EMPLOYED, CLASSES OPERATED AND NUMBER OF ENROLLEES FOR THE MONTH OF JUNE, AND CUMULATIVE ENROLLEES FOR THE YEAR

MONTH OF JUNE, 1939				
Field of Work	Total No. of Teachers	No. of Classes	Attendance	Cumulative Enrollees

State and Parish	1,194*			32,841
GRAND TOTAL				90,642

*Part-time

It will be noted that the parish school boards employed a relatively large number of teachers during the session on a part-time basis to teach illiterate adults. It must be noted that the number of teachers employed by the parishes cannot be accurately compared with the number employed

by the WPA; neither can the number of enrollees be very accurately compared. The chief difference is that the WPA teachers taught their enrollees either all the year or a large portion of the year, while parish-paid teachers taught for only a part of the time—a period of from three to six months.

The essential facts of the WPA-operated adult-education program this session are shown in Table III. Statistics for parish-paid and voluntary teachers up to this date are not available at this time.

TABLE III. NUMBER OF PERSONS EMPLOYED, NUMBER OF CLASSES OPERATED, NUMBER OF PERSONS IN ATTENDANCE FOR EACH FIELD OF WORK DURING THE MONTH OF FEBRUARY, 1940

Field of Work	Total No. of Teachers	No. of Classes	No. in Attendance
Literacy and Naturalization..	407	1,287	14,011
Public-Affairs Education.....	22	130	3,619

Total Number Children Enrolled during year.....837						
Total Number Children Attending during month of June 401						

The nursery schools are operated for the benefit of children from two to four years of age inclusive. Only those from needy homes are eligible for enrollment in the WPA Nursery Schools.

Each child comes to school early in the morning and remains throughout the school day. He is given a mid-morning lunch, regular noon meal, afternoon nap on a comfortable cot, and an afternoon lunch before he is sent home. In addition to daily inspection for signs of communicable diseases, the children are also given medical inspection before entering the nursery school and at frequent intervals during the year. Throughout the school day, they are constantly under the leadership and supervision of the teachers. They participate in guided play and recreational activities designed to develop as rapidly as possible self-help habits which children of these ages should acquire.

Bookbinding Project: The Bookbinding Project was begun in the State of Louisiana during 1936 and has proven to be one of the very worthwhile efforts of WPA. Its purpose is to clean, repair and rebind school books. Up to the middle of 1939 textbooks and school library books both were taken care of but after July 15, 1939, textbooks were excepted and work was concentrated on school library books only. Sponsor's contribution during 1939 was \$333,359.87, which was spent for materials and supplies. The State Department of Education contributed fabrics and general supplies, whereas the parish and local school boards, acting as co-sponsors, furnished utilities and space.

By eliminating the need for replacements by the Department, the work of the Bookbinding Project netted a substantial saving to the Department of Education in addition to supplying work for some 1,066 needy persons. Seventy-seven thousand eight hundred twenty-nine textbooks and 91,078 school library books were bound during 1939.

Recreation Project: The State Department of Education assumed sponsorship of the WPA State-wide Recreation Project on November 10, 1939. Prior to that time the project was sponsored by the State Planning Board. For the year 1939 attendance on a State-wide basis for all activities conducted by the WPA Recreation Project totaled 3,073,618. The Project operated in an average of 26 parishes with an average employment of 272 recreational leaders. Sponsors' contributions during the year 1939 amounted to \$62,615.81. Contributions were supplied by various cities and towns in which the project operated in the form of rent, heat, light, athletic equipment, craft supplies, etc., and did not represent any actual cash outlay on the part of the State-wide sponsor.

Activities directed included Physical Games, Social Recreation, Drama, Folk Dancing, Music, Crafts, Recreational Therapy, and a total of twenty-eight Pre-School Play Centers were in operation throughout the year. In-service training sessions were conducted by Project Training Specialists and a number of institutes were held in co-opera-

tion with Louisiana State University. The Project served both white and colored citizens of the State.

Assistance to Public Schools Project: The WPA State-wide Project for Assistance to Public Schools came into existence on December 1, 1939, under the sponsorship of the State Department of Education. From its inception in 1936 prior to its approval as a State-wide project, it functioned in local units sponsored by individual parish school boards in seventeen parishes. At the end of 1939 it was functioning in twenty-two parishes, employing 185 people. During the month of December, 1939, the records show a total of 81,671 lunches served.

This endeavor of WPA is set up to furnish free lunches to needy and undernourished children with gardening and canning units to supply some of the food served. Another phase of activity is the supplying of matrons who assist in the girls' restrooms of the public schools. Sponsor during December, 1939, contributed \$5,005.51, these contributions coming from parish and local school boards, from P. T. A. groups, Young Men's Business Clubs, Lions Clubs, Associations of Commerce, and other local groups and organizations.

AUDITING DIVISION*

The work of the Auditing Division of the State Department of Education for the fiscal year 1938-39 is given below in the form of a summary.

(1) During the early part of the fiscal year the budgets of the various parish school boards were checked. The forms on which the budgets were submitted were prepared and distributed by this Division. After the budgets were checked, recommendations were made to the State Budget Committee composed of the Governor, the State Treasurer, and the State Superintendent of Education as to the disposition of the budgets. In all cases they were approved in line with the recommendations of the Auditing Division.

*Prepared by Rex Beard.

(2) A large building program is under way at the institutions under the control of the State Board of Education. The Public Works Administration is co-operating in this program. The State Board of Education issued and sold six million dollars of bonds to finance its share, or 55% of the costs of the program, and grants have been made by the Federal Government covering the Public Works Administration's share, or 45%, of the costs. Of course the Federal Government is following its money with adequate supervision of the construction and financing parts of the entire program. This Division of the State Department of Education has been and is now working in co-operation with the Federal Authorities in the financial features of the program. Proper accounting records at all of the institutions where the program is under way have been set up and these records are carefully checked from time to time by this Division. The accounting records are based primarily on correct budgetary procedure, and as contracts are let and other costs incurred, the budgets of the individual construction funds of the institutions are revised with the view of keeping well within the costs as approved by the State Board of Education and the Public Works Administration.

(3) Each school board submits to this office a copy of its monthly budget reconciliation statement. This statement is submitted on forms prepared by this Division. The main purpose of the monthly budget reconciliation statement is to supply the local school authorities with up-to-date financial data in connection with their respective school systems. The Auditing Division examines the copies that are sent to it with the view of determining whether or not the accounting records of the local school boards are being kept properly and in addition whether or not the boards are in danger of exceeding their budgets for the current year.

(4) Adequate accounting systems have been constructed and installed during the present fiscal year for all trade schools under the control of the State Board of Education and for the Louisiana Negro Normal College at Grambling. Expenditure and receipt classifications recom-

mended by the Federal Bureau of Education were used. The records are on an accrual basis and it is, therefore, a fairly simple matter to determine at any time the actual financial condition of each of these institutions. These institutions also submit monthly budget reconciliation statements to the Auditing Division, but, as stated in (3) above, the principal purpose of such statements is to supply the heads of the institutions with up-to-date financial data for their use in administering the financial affairs of their respective institutions. Proper accounting records are now being devised for all of the other institutions under the control of the State Board of Education and it is planned to install these records during the coming fiscal year.

DIVISION OF REFERENCE AND SERVICE*

The activities of the Division of Reference and Service reach a very large area of the educational field. They include the preparation of uniform records and accounting forms; the oversight of reports made by local school systems and State higher institutions; preparation of the annual report of the State Department of Education; responsibility for the purchase, distribution, and use of State-owned (free) textbooks and school supplies; administration of the State Equalization Fund; and making administrative and financial studies of parish school systems as may be necessary.

How closely some of these activities are related to the educational program can be illustrated by citing a few of the essential facts concerning the free textbook program. Textbooks are purchased by the State and distributed to all pupils attending both public and private, elementary and secondary schools in every parish. Free textbook programs are maintained by several other states and by many cities and districts throughout the country, but in no other case do they supply books and other teaching materials to every child regardless of the kind of school or the educational level of the work offered. The service even

*Prepared by Jno. M. Foote.

includes materials for pupils handicapped by defective vision, hearing, and speech. Not only do we take care of the usual academic requirements of the elementary and secondary schools, but the range of titles and materials on the approved list is sufficient to provide for the varied interests and needs of over eighty thousand high-school pupils enrolled in eight or ten different courses of instruction.

The general plan of administration was worked out and applied by this Division in accordance with the provision of the law and the policies agreed upon by the State Board of Education and the State Superintendent. It has experienced but little modification or change except as experience indicated to be wise and equitable. The plan is characterized by simplicity and the delegation of practically all local matters to parish superintendents and boards of education. The State Board makes adoptions upon recommendation of the State Superintendent who first appoints an educational committee to examine textbook offerings and report thereon. Contracts are authorized only after competitive bidding and careful check of the educational merits of the books offered for adoption and are executed without date of termination which means that once a book is placed on the approved list it continues in service until such time as a valid reason arises for change. The general rules and regulations are set up by the State Board of Education, but their enforcement rests primarily with the local school officers and teachers. Every parish has set up a general bookroom or local depository which receives books from the State Depository and in turn distributes them among the schools in the parish.

Any information which may be desired on the cost of the free textbook program may be had by reference to the detailed tables published elsewhere in this report. They present an analysis of the cost during the current year for every parish, including the number of books distributed to elementary and high-school pupils, the total cost, and the number of books and cost per pupil at each of these educational levels. The tables also present in summary form data

for the State during each year that the textbook program has been in existence.

Measures have been introduced from time to time for the purpose of preventing waste, restoring damaged books to usable condition, and developing sound habits of care and economy on the part of children and teachers. Most parishes carefully observe these regulations and do all in their power to prevent abuse and waste. It is safe to say that the cost per pupil is less under the State program than would be the cost of corresponding service under the old plan of private purchase and ownership. There is every reason to believe that school authorities, teachers, pupils, and parents are generally satisfied with the program as it has been handled and administered by the State and by the parishes during the twelve years it has been in effect. There are very few complaints and when they arise every effort is made to dispose of them equitably and fairly. There is little question but what school work is better because of the service rendered.

The free textbook program serves to illustrate the manner in which other activities of this Division are handled. Every effort is made to be fair and equitable and administratively sound in disposing of all matters which have been delegated to it.

LOUISIANA STATE NORMAL COLLEGE*

The most important accomplishment of the 1938-1939 school year at Louisiana State Normal College was the completion of a comprehensive program of curriculum study and improvement. Every course offered at the college has been revised to some extent, many of them completely reorganized and some replaced with entirely new courses. Efforts have been made to insure a broad general education for students during the first two years of college and to eliminate overspecialization and misdirected effort at any time. All courses have been unified and reorganized to give them greater continuity and vitality.

* Prepared by A. A. Fredericks, President.

Significant curriculum changes during the past year include the introduction of broad cultural courses, a new plan for student teaching, a liberal arts course, vocational courses in agriculture and commerce, and trades courses in the new trade school on the campus. Clinics, seminars, and observation groups are becoming more important in the college program.

Scarcely less significant in the growth of the college are the additions to the physical plant. Normal has participated equally with other major colleges under the State Board of Education in a great building and improvement program. During the five-year period ending this year, a total of \$3,500,000 has been or is being spent on buildings on the campus. The Federal Government, the State, and the Parish have co-operated in providing funds for the work. Most important among the buildings completed and occupied during the past year are a high school that will accommodate upward of 500 students; a trade school adequate for this section of the State; Varnado Hall, called the finest dormitory for girls in the South and large enough to accommodate all junior and senior girls on the campus; a new infirmary for both girls and boys; a power plant double the capacity of the original plant; a men's gymnasium with adequate space for class work and health activities; an athletic plant including the concrete stadium that will seat 6,000 spectators; and a men's dormitory for varsity athletes. Several other buildings are now under construction, among them the fine arts building which will be the largest and best-equipped unit on the campus. Other buildings under construction are a student center, a natatorium, a home economics practice cottage, and a men's dormitory.

The student body has grown more rapidly in the past year than at any other time in the history of the college. The increase over last year has been in excess of seventeen per cent and has brought the college resident enrollment to 1,712. Similar increases in the student bodies of the elementary school and the high school have brought the total student group on the campus to more than 3,000.

The faculty has increased also and now numbers 115. The increasing student-teacher ratio, however, shows that the faculty has not grown as rapidly as the student group.

The past year has been the most successful in the history of the college in the field of student activities. The activities themselves have broadened to include all students on the campus and to cover many new fields. At the same time specialized aspects of these activities have been directed to new successes, particularly in intercollegiate competition. In athletics Normal had an undefeated and untied season in football and won the Southern Intercollegiate Athletic Association and the Louisiana College Conference championships. In basketball Normal won the Louisiana College Conference championship and represented Louisiana colleges successfully in both the Southern Intercollegiate and the National Intercollegiate tournaments. The track team was district champion of the Southern Intercollegiate Athletic Association.

The music program was enriched by the addition of an a cappella choir, and it now includes this group, an eighty-piece concert band, an orchestra, a glee club, and several quartets. Weekly radio broadcasts and several music festivals, clinics, and recitals are conducted by the music department. Forensic groups have participated in seven or eight major tournaments and have conducted three tournaments on the campus. They have won a number of major championships during the year. The dramatic groups also have been active both on and off the campus. The physical education program provides healthful activities for all students. Besides, it includes play days, rallies, tournaments, and sportfests for elementary, high-school, and college students from this section. An adequate number of honorary and social fraternities and sororities are maintained on the campus. Religious groups, including the Y. W. C. A., Y. M. C. A., and denominational associations, are very active.

In spite of major additions to the physical plant, the college still finds itself unable to accommodate satisfactorily its increasing student group. At least two major dormitories will be needed next year if the growth continues. A new water tank, supply pump and dairy plant are other immediate needs. These three items would cost approximately \$90,000. Additions to the faculty also are needed. Several fields, notably commerce and music, are operating with inadequate staffs. The cost of maintaining the new and vastly larger physical plant and of providing for a rapidly growing student body is substantially greater than has been the cost of operation and maintenance in the past. Consequently, an increased appropriation is necessary if the College is to continue to operate at maximum efficiency and to serve fully the State's educational needs.

LOUISIANA POLYTECHNIC INSTITUTE*

THE IMPROVEMENT PROGRAM

Seven New Buildings are included in a building program in which the Public Works Administration co-operated with the State in making it possible for us to have a fund of a little more than \$2,000,000 for permanent improvements. Three of the seven buildings are at present completed and occupied. The other four are nearing completion.

They include:

- Dormitory for Women (completed)
- Dormitory for Men (completed)
- Dining Hall and Kitchen (completed)
- Auditorium—Fine Arts Building
- Engineering Building
- Power Plant and Laundry
- Agriculture Laboratory

These buildings relieve to considerable extent the overcrowded and unsafe conditions which existed on our campus.

* Prepared by E. S. Richardson, President.

General Campus Improvements have been made as follows:

An eroded section of the campus consisting of about 25 acres has been reclaimed and beautified through a WPA Project. This provided a new baseball field, 6 tennis courts (concrete), a football practice field, and a large section beautified for other recreational use.

Sidewalks have been built over a large portion of the campus; the president's home has been renovated and remodelled; the home management house has been rebuilt and added to, providing three additional bedrooms; three of the old dormitories have been renovated; and various of the academic buildings have been renovated, including the library.

In connection with the farm, additional land has been purchased bringing the total to about 300 acres; a dormitory for boys was erected in co-operation with the NYA, and a dining hall and kitchen have been built in connection with it, accommodating about 45 boys who are majoring in agriculture.

Expenditures on these general improvements total about \$180,000.

ATTENDANCE

The net enrollment during the regular session of 1938-1939 totalled 1,891 with 928 registered in summer school of 1939. During this period we served 1,351 students in correspondence and extension courses.

The enrollment for the present session, 1939-1940, has reached 2,201 students in residence work; an increase of 21.7% over the previous session.

DIFFERENT FIELDS OF ACTIVITIES

The college organization consists of four distinct schools: The College of Arts and Sciences, The School of Education, The School of Engineering, and The School of Home Economics. Various curricula are offered in each, as follows:

The College of Arts and Sciences offers majors in agriculture, art, English, French, Spanish, chemistry, commerce, biology, history, economics, political science, sociology, music, mathematics, physics, journalism, speech, and physical education.

The School of Education offers teacher training in the various major courses qualifying for high-school and elementary teaching in public schools.

The School of Engineering offers curricula in civil, chemical, electrical, and mechanical engineering.

The School of Home Economics offers a curriculum for teachers of home economics and another for homemakers. In addition to these two main branches of study, training is offered for those planning to do home economics extension work, business positions in the field of home economics, commercial demonstration, dietitians in hospitals and other institutions, welfare workers and nursery school supervisors.

The Louisiana Polytechnic Institute holds membership in the Southern Association of Colleges and Secondary Schools, the Association of American Colleges, and the American Association of College Registrars. The pre-medical work is recognized by the American Medical Association.

Courses have been added in nearly all departments to meet the growing demand for broader training in the various fields of study.

A special course in conservation and chemurgy was offered during the summer session of 1939, available to students and the public in general, at which time we presented outstanding lecturers from various fields of industry. Lack of a suitable meeting place prevented our planning to repeat the course for the coming summer. *The Tech Digest*, a monthly bulletin, developed from the interest aroused by this program.

A new type of teacher service was initiated in October, 1938, which we feel is an innovation and a valuable contribution. Miss Helen Woodard was employed as a Teacher

Personnel Adviser with duties (1) to assist teachers who are graduates of Louisiana Tech in adjusting themselves to their total environment, (2) to co-operate with school officials in securing the best teachers for their staffs, and (3) to establish co-operative contact between the college and the public schools. We believe that this has proved to be an indispensable service to teaching graduates and to school administrators.

Through the Extension Department a new service in visual education is available to high schools in this area. A film library has been established and the films are distributed from this department.

The placement of graduates in suitable positions is administered from the Extension Department in co-operation with the Teacher Personnel Adviser.

Transportation of commuting students is fostered by the Extension Department. This service has made transportation facilities available to many additional students during the past few years.

Student welfare is an important phase of administrative work and the deans of students are doing everything possible to give the students every educational advantage. Student activities are carefully supervised and encouraged. Student health is guarded to the utmost that our facilities will permit. Food preparation and service are conducted under the direction of two specially trained dietitians. Also, a registered nurse is employed to care for students who are ill while on the campus.

The Tech farm is gradually being equipped to serve various needs of the campus as well as to give special training to students in production and distribution of farm products.

We have installed a motor-driven milk bottling machine, a mechanical bottle washer, an ice cream freezing unit, and a milk pasteurizing unit. Bottled milk is furnished to the cafeteria and dining hall and much of the ice cream dispensed on the campus is furnished from the farm unit.

Members of the agriculture staff serve adjacent communities in helping to organize and promote various agricultural activities.

The campus landscaping project is being carried out through co-operation of the agriculture department and the department of buildings and grounds.

The mathematics department conducts a clinic five days each week, from one to four o'clock, to assist all students who are weak in mathematics and who need extra help with this subject. This service has brought about considerable improvement in the quality of work done by students in this department.

The speech faculty also conducts a clinic. Students who have speech difficulties are assisted in overcoming such handicaps.

The school of home economics has available for their use the cafeteria and the dining hall for giving training in dietetics and institutional management. They also offer a course in general nutrition for physical education majors.

Library service to students has been improved by adding trained librarians to the staff, by increasing the utility of space available, as well as by increasing the number of books for reference. Also, sufficient library training is offered to qualify students as part-time librarians in the public schools.

ACTIVITIES OUTSIDE OF REGULAR ROUTINE

Extra-curricular activities for the students are sponsored within the various departments:

Agriculture: The National Demeter Agriculture Fraternity is honorary for agriculture majors.

Stock judging teams are sent to various live stock shows for competition in stock judging.

Art: The Art Club is composed of students taking courses in art and who are interested in promoting art education.

Exhibitions of student work are held periodically. Style shows emphasizing correct costume are held seasonally by the art students.

Chemistry: The Tech Chemistry Club for students majoring in chemistry is alive to developments in the world of science.

Commerce: The Commerce Club is being organized at present to promote fellowship and common interests of the department.

English and Foreign Languages: The Tech Theater Players is an organization to promote dramatic interests among students of speech. Plays are presented at frequent intervals.

The Forensic Club promotes interest in debate among students of speech. These students compete in debates with teams from other colleges on this and other campi.

The Open Forum is an organization of students interested in keeping in touch with developments which are of interest to students and young people in general. Radio broadcasts are given regularly during the session over KMLB.

Sigma Tau Delta is honorary scholastic for students of literature. Through their sponsorship the *Tech Review* is published quarterly consisting of much of the creative writing done by the students of this group.

Los Hispanofilos is an honorary Spanish club for a limited number of students. Plays are produced and presented in Spanish, supplemented by their English interpretations.

Journalism: The Press Club has a membership consisting of students of journalism and of the sponsors of student publications.

Mathematics: The Galois Mathematics Society is composed of major and minor students of mathematics and members of the mathematics faculty.

Music: Various musical organizations exist for the purpose of serving the musical needs of the school and community as well as for recreational and cultural purposes

of students of music and others interested in participation in musical activities. Membership in most of these organizations is by try-outs.

The Band O' Glee, a choral organization for upper-classmen girls, renders several delightful programs on and off the campus during the session.

The Freshmen Girls' Glee Club supplements the Band O' Glee providing opportunity for freshmen girls to prepare for more advanced work in this activity.

The Tech Choir serves the campus and various organizations with specialized choral music. Membership is by invitation.

The Chorus (for students who drive in to school) is organized for those students who do not have opportunity to participate in the regular campus organizations for vocal music.

The Girls' Band is composed of women students who wish to participate in band music activities.

The Men's Glee Club presents several programs on and off the campus during the session, and is composed of men students who wish to participate in vocal music and who can qualify for membership.

The Lyre Club consists of members of the regular college band. These students serve the school during assembly programs, athletic events, and with several regular stage appearances during the session. They also serve adjacent communities when in need of such services.

The Tech Collegians is an entertainment orchestra serving the campus and various outside interests. It is composed of some of the best instrumental musicians on the campus. The Collegians specialize in popular music.

The Tech Symphony Orchestra fosters musical culture through classical music and is composed of the best talent on the campus. Some of the most enjoyable programs presented on the campus are those of the Symphony Orchestra.

Physical Education: The Health and Physical Education Club is composed of students majoring in this depart-

ment and has for its purpose the promotion of interest in, and appreciation for physical education.

The "T" Club is composed of all lettermen in athletic sports.

The Blue Jackets is a group of girls from physical education classes who are trained to assist the band with entertainment at athletic contests.

Physics: The Radio Club is composed of students interested in amateur radio to the extent of studying developments in that field and experimenting further with radio physics. This club operates a licensed short wave radio station.

Social Sciences: The International Relations Club is interested in keeping abreast of present day developments in the various fields of the humanities.

Engineering: The Engineering Association is composed of all students and faculty of the School of Engineering for the purpose of furthering the interests of the school. This organization sponsors an annual banquet attended by present and former students of engineering and the fathers of present students, as well as outstanding men in the engineering profession.

SOUTHWESTERN LOUISIANA INSTITUTE*

Improvement Program. During this year we completed five new buildings and completely remodeled a sixth building at a total cost of \$483,900.00. These include a highly adequate gymnasium for men, a new girls' dormitory and a remodeled girls' dormitory with a total accommodation for 165 women students, one boys' dormitory on the farm accommodating 90 students, a dining hall for the agriculture center accommodating about 500 men students, and a student center.

The new gymnasium has made it possible for us to greatly expand and improve the physical education program. The student center serves as a wholesome center of student

*Prepared by L. E. Frazar, President.

life on the campus. These two buildings, with the increased dormitories and dining-hall facilities, have greatly improved living conditions at Southwestern and have added much to the student morale.

Plans for 1939-40 include academic buildings which will probably add sufficient classroom space to take care of the instructional needs of the college for several years.

Attendance. A total of 2,020 regular college students were enrolled for the session. This was an increase of 495 or 32% of the total enrollment of the year 1937-38. Fifty-nine Louisiana parishes were represented. Sixty-two students came from outside of Louisiana representing eighteen other States and foreign countries.

There was a noticeable increase in the percentage of men in the student body. The 2,020 students included 1,206 men and 814 women.

The senior class showed an increase of 39% compared to 32% increase of the college, which may indicate an increased holding power.

The fields of agriculture, commerce and education showed the greatest increase insofar as particular courses were concerned.

There were a total of 1,429 students registered through the Division of Extension. These extension students did a total of approximately 3,000 semester hours of work, an increase of over 60% of the previous year.

The regular enrollment of 2,020, plus the extension enrollment of 1,429, plus the enrollment of the teacher-training practice schools of about 1,200, plus a summer school enrollment of about 1,100, makes a total of over 5,700 students enrolled in the various divisions of the Institute during the year.

Organization. The new College of Agriculture, created at the close of the year 1937-38 and composed of the various departments of agriculture and home economics, has made remarkable progress and definitely justifies its organization.

Size and Training of the Teaching Staff. The faculty consists of ninety members, or thirteen more than 1937-

1938. A total of eighteen new faculty members were employed, but five were filling vacancies created by resignations or promotions. This does not include approximately twenty critic teachers in the elementary and high school.

Twelve of the new members of the faculty are natives of Louisiana. Six are from other states. All persons added are highly trained, most of them having advanced degrees from outstanding American universities. The average training of our faculty is above the average of colleges of this class.

Support. The support of the Institute consisted of \$425,000.00 appropriated by the State Legislature. Because of the large unforeseen increase in enrollment and the necessary additions to the faculty, this amount proved to be far from adequate, and indications are that unless this amount is greatly increased, the work of the Institute will be definitely handicapped in the immediate future.

Different Fields of Activities. The instructional work of the faculty is on a high level and very satisfactory from the viewpoint of the administration.

Research and independent contributions on the part of the faculty members were necessarily very low due to extremely heavy teaching loads of all members of the faculty.

The Institute, in addition to its routine work, is always at the service of the community and makes continuous contributions to its welfare. Individual members of the faculty participate in a large degree in the community activities of Southwest Louisiana. The membership of the various civic organizations of Lafayette includes large numbers of Southwestern faculty members.

Constant contact is maintained with the alumni and the Alumni Association. This has proved to be very valuable, and the Southwestern alumni are very loyal to the Institute and on the whole have the right attitude of co-operation and support without the undesirable inclination to meddle or dictate.

Activities on Campus Outside Regular Routine. Two very valuable conferences were held on the campus this

year. The geography conference, under the direction of the head of the geography department, brought together a large group of geography and other elementary teachers of Southwest Louisiana. Considerable interest was evident.

The education conference was outstanding. Splendid papers were given on various subjects. It was well attended by the educational leaders of the entire State.

The mid-winter fair, under the auspices of the College of Agriculture, brought several thousand visitors from this section of the State. It was a splendid success from the educational as well as the civic viewpoint.

The various rallies and other high school contests on the campus were attended by approximately 4,000 visitors principally high-school students and teachers from Southwest Louisiana.

The annual agricultural short course was well attended and highly successful.

The Southwestern relays brought together athletes from the entire South.

Graduates. A total of 288 graduates received their bachelors' degrees. Sixty-six others completed the three-year teacher-training course and received teachers' certificates. Of the degree graduates, 187 were teachers. This made a total of 253 teachers' certificates awarded. Of the 101 degree graduates who were not qualified to teach, thirty were majors in agriculture and twelve in commerce.

Nearly all of these graduates are now employed or continuing their study in graduate schools. None of our graduates with teachers' certificates is unemployed except a few who were very weak and could not be recommended highly.

Needs. (1) After the present building program is completed, it is apparent that the Institute will need additional dormitory space for at least 500 students. This will entail an expenditure of about a half million dollars.

(2) The Institute is very much in need of a large auditorium properly equipped and having a seating capacity

of not less than 3,000. This would probably cost not less than half a million dollars.

(3) With the constant increase of the student body, a large number of additional faculty members will be necessary in the immediate future. This, of course, will call for an additional appropriation for the support of the Institute. A conservative estimate for maintenance by 1940-41 is \$750,000 a year.

(4) There is a definite and ever-increasing demand by the alumni for a graduate school wherein the master's degree may be awarded in different fields. Something probably will be necessary in order to meet that demand in the near future.

SOUTHEASTERN LOUISIANA COLLEGE*

Southeastern Louisiana College, which was formerly known as Hammond Junior College, was founded in 1925. It was first operated in connection with the Hammond High School. By Legislative Act No. 136, of 1928, the General Assembly of the State of Louisiana, Southeastern was made a State Institution, with the privilege of becoming a four-year college and with an administration similar to that of the other State colleges, which function under the jurisdiction of the State Board of Education. In 1930 the third year was added to the curriculum at Southeastern, which made it a three-year institution. In May, 1937, the State Board of Education passed a resolution which authorized the President of Southeastern Louisiana College to prepare curricula of study extending through four years, and leading to the bachelor degrees as the need of such courses might demand and the facilities of the college make possible.

In September, 1938, Southeastern opened its doors for the first time as a four-year institution and offered curricula in arts and sciences, teacher-training, music, business administration, and health and physical education. Southeastern is divided into two major colleges: the College

* Prepared by J. Leon Clark, President.

of Arts and Sciences and the College of Education. The College of Arts and Sciences consists of the departments of biology, chemistry, English, foreign languages, mathematics, physics, and social sciences. The College of Education consists of the departments of education, which includes the teacher-training department, business administration, health and physical education, and music. In 1939 an elementary training school was opened in connection with the department of education.

Southeastern Louisiana College confers three degrees: Bachelor of Arts, Bachelor of Science, and Bachelor of Music.

In 1926, there were only eight faculty members and seventy students. Now, in 1940, the faculty consists of forty-five well-trained men and women, many of them holding the doctor's degree, a student body of approximately 600 in the regular college, 165 teacher-training students, and 125 attending night classes. There were 50 young men and women to receive the baccalaureate degree at the 1939 commencement. This was the first commencement at which degrees were offered.

Administration Building: In 1934, there was erected a modern brick and steel-reinforced concrete administration and classroom building. This building was named Lucius McGehee Hall in memory of Dr. Lucius McGehee, one of the founders of the College and a staunch supporter. The president's office, business offices, registrar's office and post office are located in this building.

Stadium: A concrete stadium with dormitories for about one hundred men students was built in 1937. This building has a modern cafe and a social room. There are accommodations for 8,200 spectators. This is one of the finest small stadiums in the South.

New Building Program: A \$1,000,000 building program has just been completed at Southeastern which gives it a plant consisting of thirteen buildings valued at \$1,500,000. All of these buildings are operated under a single clock system and have a unit fire-alarm system operating throughout the campus. There have recently been installed

twenty-three 300-watt campus lights. The seven fireproof, brick buildings just completed consist of:

Science Building: A two-story brick and reinforced-concrete science building houses the departments of physics and biology on the first floor; the second floor is occupied by the chemistry department. The laboratories are completely equipped with the most modern appliances and apparatus and are conveniently located near supply and storage rooms which have ample space for storing surplus chemicals and apparatus. The chemical laboratories are equipped with electrically controlled fume hoods and are painted with fume-proof paint. These laboratories accommodate classes in general, analytical, organic, and physical chemistry. The biology laboratories provide space for botany, zoology, and bacteriology as well as other advanced courses. On each floor is a lecture room provided with window blinds making it very convenient to use the projecting machines. These rooms are equipped with elevated seats for one hundred students each.

Music and Dramatic Arts Building: The music and dramatic arts building is also a two-story concrete structure. There are seventeen sound-proof practice rooms and teaching studios, each equipped with piano. The auditorium seats 700, and is provided with a projector and facilities for presentation of sound motion pictures as well as any type of stage production including grand opera. The seats are opera-chair type with upholstered spring seat and upholstered padded back. A band room with a series of elevations for players provides for instrumental ensemble groups, and a similar room cares for choral work. Both rooms are located adjacent to the stage as are dressing rooms. A costume storage room ample for storing all uniforms, vestments, operetta or opera costumes is provided to the rear and above the stage. Scenery storage is located back of the stage. The equipment also includes a concert grand piano for the stage. The building is provided with ten regular classrooms and four offices, all of which are equipped with two-way communication and radio system.

Education Building: The two-story brick education building is equipped with the best type of materials suitable for the various grade levels. The high-school department is equipped for home economics, general science, commerce, and the regular academic courses. The entire building is equipped with a modern two-way sound system, providing for communication and radio programs in all rooms. There is an auditorium 72 feet long and 40 feet wide with a seating capacity of 252. There are five workrooms connected with classrooms. Locker spaces and built-in cabinets are provided in the rooms for the first four grades, and steel lockers are provided in the corridors for all others.

New Gymnasium: The new gymnasium is made of pressed brick. The floor space, which is of maple, is one hundred and ten feet by ninety-four feet, and lighted by thirty-six detachable, fifteen hundred watt lights. The equipment consists of chest weights, traveling rings, a vaulting horse, a vaulting board, a spring board, punching bag drums, horizontal bars, parallel bars, climbing rope, gym mats, six basket-ball backboards, and sliding bleachers which accommodate approximately seven hundred and fifty spectators.

President's Residence: The president's residence is a modernistic structure of red brick, located in a beautiful pine grove on the west side of the front campus. The house is furnished in Swedish-Modern, along conservative lines and colors, and has all up-to-date conveniences.

Girls' Dormitory: The girls' dormitory is most attractive and one that most any girl would enjoy living in as it has every convenience imaginable. There are 24 bedrooms which accommodate approximately 63 girls. Each bedroom is furnished with attractive wooden beds that have expensive innerspring mattresses. There are large closets in each room and on one door in every room there is a full-length mirror. An efficiency kitchenette is found on the first floor. In a single unit is a Frigidaire, gas

stove, oven, sink, and cabinets for storage of food. There is a conveniently equipped room for the students to wash and press their clothes. The reception room, located to the east of the main entrance, is the most beautiful room in the dormitory. The furnishings include eight various shaped tables, ten occasional chairs, two large divans, two floor lamps, two table lamps, two modernistic wall lights, and two most attractive chandeliers. Opposite the reception room is the matron's office and bedroom.

Library: The library building is also a two-story brick structure built to harmonize with the architectural are seminars, the reserve stack room, the reserve book room, the receiving room, lecture hall, kitchen, and staff room. Leading from the first floor to the second floor is a dual winding stairway which leads to the charging desk. Also on the second floor are the browsing room with a capacity of 730 volumes, the library office and reading room with a capacity of 4,360 volumes, and the periodical room and the reference room with a capacity of 3,580 volumes. New equipment in the building includes filing cases, desks, chairs, standard library tables, and exhibit cases. The stack room consists of three levels equipped with steel book shelving and carrells for special students.

Roads and Walks: A \$10,000 PWA project on roads, walks, and curbs has just been completed. In the near future a \$34,000 WPA project will be inaugurated. After its completion, the campus will have a competent system of roads and walks. The natural beauty of Southeastern's campus is being improved upon by the artistic planting of flowering plants, shrubbery, hedges, and trees, and by the laying of drains, driveways, and walkways. A beautiful boulevard is being constructed running East and West across the central part of the campus. Concrete walks connect all the buildings with one another and furnish three outlets to the city of Hammond. The Louisiana Highway Commission has hard-surfaced the streets and driveways around and across the campus.

SOUTHERN UNIVERSITY*

Southern University is just closing the fullest school session during the 26 years that it has been at Scotlandville. This does not mean that it has had and does have no problems, but that progress and advancement far outweigh the problematic aspects.

The first outstanding thing in this progress is a building program, which is adding to the physical plant 12 much-needed structures ranging from agricultural barns to student dormitories. The second outstanding thing is the effective operation of an institutional service program, which has extended Southern University's assistance to Negroes in the State in every walk of life. Each department of Southern University has aggressively offered itself to the Negro public for conferences, lectures, the answering of questions, the furnishing of information generally, and for maintaining ideals and optimism. Southern University has taken the lead in seeking to co-ordinate and stimulate all of the agencies in the State that are seeking to improve Negro life, especially Negro rural life. The ideal has been to make the institution a service center for the Negroes of the State in all vocational fields.

Southern definitely seeks to implant these effective service ideals into the resident and instructional program, which last year enrolled 2,016 students, graduated with a baccalaureate degree 98, taught on its Scotlandville campus 1,252, in its extension centers 462 and in its summer school 673. That the instructional program is seeking to prepare for the needs of the State is reflected in the departmental enrollments of the college proper as follows:

Home Economics.....	193
Agriculture	132
Elementary Education.....	121
Men's Trades.....	89
High-School Teacher Training.....	81
Commerce	67

* Prepared by F. G. Clark, President.

Arts and Sciences.....	62
Physical Education.....	51
Music	27
Special Students.....	47

One hundred of these enrollees come from 18 other states.

The faculty consists of 105 members whose pattern of professional training is slightly better than two years beyond the bachelor's degree. Several hold the doctorate. One-fourth are members of some kind of honorary scholarship society, including Phi Beta Kappa and Sigma Xi. Frequently, they contribute to publications and to programs of professional organizations. This year, one received a patent for an educational device used in connection with teaching arithmetic. Southern's being rated as an "A" college by the Southern Association of Colleges and Secondary Schools, by the American Medical Association and various state departments of education, and its membership in the American Council on Education are due mainly to its strong faculty.

Agricultural Instruction is a highlight at Southern, working through divisions of farm crops, dairy, swine, poultry, work-stock, gardening work-stock and farmshop. Two hundred and forty acres of land are under cultivation. And in farm crops, as in other divisions, the keynote is, to inaugurate and promote practical farm life among the Negroes of Louisiana. The farm seeks to be an attainable model for prospective and existing Louisiana Negro farmers. A new development is a canning plant, the service of which is extended to the community to assist families in saving. The agriculture department has sought to unite itself, the Smith-Hughes, and the Smith-Lever workers in a concerted attack upon Negro rural and farm problems in the State.

Trades and Industries instruction reaches 63% of Southern's men students. Effective work is done in auto mechanics, carpentry, printing, practical electricity, and tailoring. A great stimulus to this work has been the introduction of a four-year baccalaureate curriculum, giving it

the importance which it should have, and placing it on par with all others. With the new building next year, we hope to add three new departments and to augment our staff.

Home Economics instruction reaches virtually each girl in college. It emphasizes proper use and knowledge of foods, clothing, and home life in the average Negro families of Louisiana. Practice-teaching is done in regular schools off the campus as well as in our own demonstration schools, in an effort to acquaint students with life as it is.

Music is a distinct feature of Southern University. Each student enrolled receives some training in this field, as a member of the public-school music classes or one of the eight units of the department as the quartet, band, etc., offering special instruction. Each week some unit of the Southern University music department, without cost, assists some white or colored organization by appearing on its program.

Teacher Training is an integral part of Southern's work because of the great need for more and better Negro teachers in Louisiana. Two-thirds or more of Louisiana's Negro teachers have shared instruction at Southern University, reaching from the faculty of the Louisiana Rural Normal to many of the one-teacher schools of the State. Through the curriculum laboratory, the head of the teacher-training department, and the dean, complete general services are supplied to the State's Negro teaching force. Southern's own laboratory schools seek to reflect the typical best of what the Louisiana situation should be. Stimulation of leadership in all of the State's movements affecting Negroes has come from Southern. Especially is this true regarding the curriculum development program. The most recent, and we feel the most effective, step taken by this department is the inauguration of a State-wide educational conference composed of local and State white educational officials, and Negroes, who meet to attack pertinent problems of Negro education in Louisiana. The teacher-training department constantly makes individual studies, hoping to lessen difficulties in Negro education.

Personnel Work at Southern seeks to solve the individual problems of all enrolled students. With more dormitory space, we have been able to locate freshmen in single buildings, dealing with them individually during this crucial period. Eventually they learn what character means and by the time that they graduate, have a very good idea of what home-life should be in society. The development of a well-rounded personality and getting the most from life wherever one may be is the aim of this program.

The Health of students and faculty members is closely guarded. Significantly, only two deaths have occurred on the campus in the 26 years of Southern's existence. Health problems are attacked through a general institutional health program, from a medical point of view, as well as through the department of physical education which seeks to have all students develop good, clean bodies and lives. The staff in physical education, as in other departments, is frequently called upon for services in all parts of the State. Likewise, as in the case of music, it has recently assisted in conducting a Federally-sponsored conference.

The Arts and Sciences Division, as a co-ordinating agency, reaches all of the students at some point through its 88 courses, its extension work, its evening classes, the State Rally which is raising the ideals of all Negro education in the State in literary, artistic and athletic events, reaching annually 5,000 students, and through its co-operation with the National Youth Administration program, by providing instruction to about 100 boys and girls who otherwise would be left on the street corners.

Because Southern University has grown so rapidly and because it is the only State institution which is seeking to prepare Negroes in *all* of the important vocations of life, and doing so at the baccalaureate level, it has many outstanding needs in the midst of its progress. Chief among these are the following:

1. *A Larger Teaching Staff.* Without exception, each instructor and administrator has a schedule of work which, because of our ideals of service, leaves him little time for himself.

2. *More Money for Better Salaries* should be available to give the security and make possible the contentment that a faculty member in an institution of our class should have. Sixty percent of the schools of Southern's class pay distinctly better teaching salaries than it does. With our ability to attract good teachers, we should also like to feel that we can hold them.
3. *A Much Larger Physical Plant.* The presence of many old buildings and service systems *demands increased money for maintenance*, otherwise instruction and service are very uneconomical.
4. Because of the fact that almost a quarter of a million dollars was lost as a result of not securing PWA assistance in our building program, *several buildings are needed*. Our *present laundry should be replaced by a new one*. Due to its inadequate capacity and its worn-out machinery, at best now laundry service can be provided only monthly. Also needed is a *home-economics building* to accommodate the home-economics instruction which carries the largest enrollment in the entire college.
5. The existing central steam line and water system were laid about 25 years ago. Moreover, they were constructed of the cheapest material, and do not represent best engineering practices. *New steam lines and water mains should be provided completely.*
6. *All of the old buildings on the campus are in a bad state of repair.* They have been patched-up with the small maintenance fund that could be afforded. However, what is needed is a thorough-going repair program of some \$75,000 or \$100,000 outlay that will basically put these old structures in good condition.

LOUISIANA NEGRO NORMAL AND INDUSTRIAL INSTITUTE *

GRAMBLING, LOUISIANA

Our physical plant of eleven inadequate frame buildings has been rebuilt by an appropriation of almost a half million dollars into a comfortable and attractive modern plant consisting of a girls' dormitory, dining hall, library, gymnasium-auditorium, academic building, president's home, water system, sewerage system, and heating facilities.

A twenty-five per cent increase in enrollment comes from fifty-four parishes in this State.

The twenty-seven faculty members hold the baccalaureate degree from the leading schools of the South. Many have done and are doing advanced work at such universities as Columbia and Leland Stanford.

The school is supported by the State of Louisiana through which about eight per cent of its appropriation comes from the Federal Government.

Teacher training includes both the pre-service and in-service phases. This training is made possible by five training centers located in different parts of the State; thirty-seven state supervisors, and five teacher-trainers serve as faculty members of this school. A curriculum laboratory supplies elementary curriculum materials for rural schools over the State. A field service unit gives assistance to the five training centers and to the rural sections in general.

Clubs and organizations include Dramatics, New Farmers of America (students), Debating, Literary, Home Economics, Colored Farmers Agricultural Improvement Association (men), Colored Home Makers Improvement Association (women), Hi-Y (boys and girls), Y.M.C.A., Y.W.C.A., and choral clubs.

An increased teaching staff is needed for the following reasons:

* Prepared by R. W. E. Jones, President.

1. The field service unit is unable to fill the demand for helping schools desirous of becoming training centers of the school.
2. The functioning of the field service unit decreases the number of instructors left at the institution, thus increasing the teaching load and often hampering it.
3. Frequent requests by other schools for our faculty members for conferences, study groups, etc.
4. An increased enrollment of trainees from our training centers.

Other needs of the school are a new bus for the traveling unit, an adequate boys' dormitory, and a larger maintenance fund.

HUEY P. LONG MEMORIAL TRADE SCHOOL*

WINNFIELD, LOUISIANA

The new building was completed October, 1939. Our enrollment was much larger than expected. Every department was filled to capacity and in addition to this two commerce instructors were employed to take care of the enrollment.

At the present time we are operating five departments, namely: building trades, machine and welding, auto mechanics, electrical, and commercial. Our attendance exceeds two hundred twenty students. Of course, this includes our trade extension classes at night. Our day attendance is approximately one hundred forty students.

Our teaching staff consists of seven instructors. All of them have had a wealth of experience in the trade that they are teaching. They have adapted themselves wonderfully to trade training in this institution and are very progressive in their instructional work. Each instructor is continually analyzing the trade that he is teaching in order to cope with the future progress of industry.

* Prepared by M. R. Pollard, Director.

Sometime in the near future it will be necessary to make provisions in the budget for a small amount of money for the director's travel and expense during the summer months to find employment for the graduates in the various trades. In my opinion this can be done with very little money.

We have organized a softball team of trade school students in order that we may gain a small portion of much-needed publicity. We believe this goes a long way toward improving the work and the spirit among our students. Of course, this activity takes place outside of school hours and is no expense at all to the institution.

The moral support of this institution by the people has been excellent. There have been no complaints and we have had very good co-operation. On more occasions than one, industry has supported and helped us in every way.

SOUTHWESTERN LOUISIANA TRADE SCHOOL*

CROWLEY, LOUISIANA

The staff of the Southwestern Louisiana Trade School of Crowley arrived in Crowley August 2, 1939, after completing a four weeks' conference at Natchitoches, Louisiana, with the staffs of the other four State trade schools.

The building of the Southwestern Louisiana Trade School was not completed at this time and we were given temporary offices in the Acadia Parish School Board Office, from which point we received and checked equipment which was being shipped to us by various equipment contractors.

On September 4, 1939, we held our registration of day-school students, for the school year 1939-40, at the Acadia Parish School Board Office. Registration in the following courses was as follows:

Building Trade	4
Electrical Trade	8
Auto Mechanics Trade	10
Machine Shop Trade	18
Commercial	24

The building was opened to us on September 28, 1939, and we then went to work checking and installing the various pieces of equipment in the school. This work progressed rather rapidly and by October 10, 1939, we were able to start our day school in operation.

The building trades department built a miniature reproduction of the trade school building and it was placed on a float and entered in the Rice Festival Day parade on November 7, 1939. This float gave the school a great amount of favorable publicity in this area.

Registration for night distributive education classes commenced in November and 122 students were registered in courses in bookkeeping, typewriting, and shorthand and on November 13, 1939, these classes started their meetings.

On December 17, 1939, "Open House" was held. Three hundred people visited the Trade School and were shown through the various departments by the members of the staff, who explained various pieces of machinery and answered questions which were presented.

The first classes in trade extension courses commencing on January 2, 1940, were classes in motor tune-up for auto mechanics. There were 144 auto mechanics registered and these students were grouped into four divisions. This class in motor tune-up work was organized by selecting a committee of automobile dealers and they attended to the details of registration. This method of registration proved most effective.

Welding-trade extension night course was commenced on January 8, 1940, and twelve men were registered in this course. All men registered in this work were employed in some phase of the welding trade. This class was restricted in size because the welding equipment presently owned

* Prepared by J. W. Mitchell, Director.

would not accommodate a larger group. A fee of \$10.00 was charged each member of the welding class; this, however, was the only course offered at the school in which a fee was charged.

A blueprint reading and drafting course commenced on January 9, 1940, and twenty carpenters registered in this work.

Electrical trade extension night classes commenced on January 18, with 17 electricians registered.

The present enrollment at the Southwestern Louisiana Trade School is as follows:

Commercial (Day)	47	
Electrical Trade (Day).....	13	
Auto Mechanics Trade (Day).....	10	
Machine Shop Trade (Day).....	21	
Building Trade (Day).....	8

SHREVEPORT TRADE SCHOOL*

Our instructional staff was increased from five to ten men with a corresponding increase in students. Additional shops were added, namely: welding, auto body shop, refrigeration and air conditioning, and a shop for the construction of all-steel school bus bodies.

* Prepared by F. L. Miller, Director.

State appropriation from the general fund for the operation of the plant was \$40,000.00, which was supplemented by a special appropriation, from the State Board of Education from the building fund, in the amount of \$31,838.68. In addition to these two, the Federal Government, by authority of the Smith-Hughes and George Deen Acts, participated by reimbursing the school for instruction in the amount of \$15,898.72.

The special appropriation from the State Board of Education was for the purpose of constructing a shop building, 50' x 90', to house the automobile body shop and the bus body construction shop; also to purchase equipment for the installation of four departments in addition to buying more equipment for the already existing shops, which were the machine shop, electrical shop, woodworking, and auto mechanics shop. The school was able to accommodate 264 day students and 236 men in the night school, giving instruction to a total of five hundred individuals.

The night-school program was conducted for men who were employed during the day so they might increase their knowledge of their trade or make promotion in their regular occupations. The day-school program prepared young men for entrance into an occupation.

The school has been growing steadily from its establishment in July, 1936, in response to a growing demand for training in the industrial field.

Naturally since the school has increased its activities one hundred per cent since the Legislature made appropriation for operation, it will be necessary for our future appropriation to increase to carry on the work as presently being done and to meet the necessary expenses of steady, healthful growth in this field of education.

NATCHITOCHES TRADE SCHOOL*

The Natchitoches Trade School opened at the beginning of the school year 1939 in a new building with new equipment. The building and the major part of the equipment was provided by the Natchitoches Parish School Board. The school works in close co-operation with the Natchitoches High School and the Louisiana State Normal College.

The enrollment is as follows:

Day Trade Courses:	Total Enrolled	Drop-Outs	Reasons:
Auto Mechanics	34	17	5 to work 2 military service 2 no transportation 6 changed schedule 2 illness
Carpentry	12	5	1 army 1 navy 3 to work
Electrical	20	4	4 to work
Machine Shop....	26	9	1 no transportation 8 to work
	92	35	= 57 Active Students

Of the active students, 9 attend high school part-time, and 4 work part-time.

Night Trade Extension:	Total Enrolled
Blueprint Reading and Drawing	24
Carburetion Clinic	50
Machine Shop and Welding	10 (Class closed 2/8/40 due to drop-outs.)
Reading House Plans and Determining Bill of Material	20 (Class completed 2/1/40.)

* Prepared by H. C. Givens, Director.

The teaching staff consists of one instructor for each trade and an instructor for drawing, mathematics and science as they relate to the trades. The men are well qualified for their positions, having had extended trade experiences. Three of them have bachelor's degrees.

Funds for the operation and maintenance of the school for the fiscal year 1939-1940 are as follows:

State Funds \$26,000.00 (Resolution of Board of Liquidation dated May 24th, 1939.)

George-Deen Fund \$4,000.00 (Reimbursement of Instructors' Salaries from State Department of Education.)

SULLIVAN MEMORIAL TRADE SCHOOL*

BOGALUSA, LOUISIANA

There have not been any large building additions to Sullivan Memorial Trade School during the past year. A small forge shop is now being built, as an addition to the machine shop. All of the forge work will be confined to the forge shop at its completion, keeping coal, ashes, water, and smoke out of the Machine Shop.

Much of the old, obsolete equipment has been replaced by new, up-to-date equipment in both the auto mechanic and machine shop departments. New additional equipment was also added to the electrical department. This was necessary to make the teaching of the trades complete and thorough. All departments at this time are very well equipped to teach the trades in a most efficient manner.

The following trades are now being taught at Sullivan Memorial Trade School: auto mechanics, carpentry, electricity, machine shop. Acetylene welding, arc welding, blueprint reading and shop sketching, and trade mathematics are also taught, but as units in one of the four major trade courses.

The number of students enrolled at this time is higher than at any time since the school was started. Eighty-two students are enrolled in the four trade classes. Some of the

* Prepared by E. B. Flaherty, Director.

students are classed as part-time students. They work on the six-hour shifts at the Gaylord Container Corporation and attend part-time to suit their working schedule. During the weeks in which they work at night or early morning, full time attendance is possible at the Trade School. A high percentage of attendance is maintained by these part-time students.

The full-time students and those taking two high school subjects have very satisfactory attendance. Attendance requirements are put on an industrial job basis, getting the student trained in prompt and regular habits for work.

Five evening trade extension classes, for men working in the trades during the day, were operated from October through March. These classes were held at night and the following courses were offered to further the training of these journeymen: machine shop practice, electricity, acetylene and arc welding, blueprint reading and shop sketching, trade mathematics and reading the slide rule.

Four full-time trade instructors, with the Director teaching one-half of the day, comprise the staff of teachers. All of the teachers have had training and practical working experience in the trades they are teaching. Very little training in the methods of teaching and other teacher-training subjects has been given to the four teachers. A four-week conference, dealing with trade analysis and teacher training, was held last summer, in which four of the staff participated. I believe more teacher-training classes would be of great help to the teachers at this school.

An N. Y. A. program has been in progress since the beginning of the school term last September. Seventeen young men students are now taking part in this activity. Following are some of the projects accomplished by the group: the building of seven filing cabinets for lesson sheets; the making and assembling of display boards for different departments; the building of a rack and screen for projection machine; cutting out concrete and wood floors for electrical installations and replacing after job was finished; setting up, leveling, and fastening machinery;

building guards for machines; cutting grass and shrubs; painting woodwork, benches, and oiling floors.

Many other jobs have been accomplished by these N. Y. A. members. They have been a big help to the school and have shown real interest in their jobs. All have learned many good trade habits and practices in these activities and have honorably earned the small aid which permits them to remain in school.

Volley ball and soft ball teams have been organized in the different departments. Games between the different departments have been played creating considerable interest in sports. Fair play has been taught and stressed throughout all these activities. Types of games and contests in which all of the students take an active part, are the kinds we hope to develop at this institution.

The Sullivan Memorial Trade School is filling a real need in this district. The young men now enrolled realize the impossibility of their attending college and are really interested in procuring training. In this manner they can gain employment in a trade and earn a respectable livelihood for themselves and families.

LOUISIANA STATE SCHOOL FOR THE DEAF*

IMPROVEMENTS

After approximately eleven months of construction, the institution took possession of their new buildings, which were authorized and constructed under the direction of the State Board of Education with Federal participation.

Two buildings were erected; the vocational building, being the largest and offering badly needed vocational opportunities for the children, was built for the sum of \$213,737, and new equipment purchased for the sum of \$39,190. The second building is a gymnasium addition. The small gymnasium we had was inadequate for the needs of the school and afforded only basketball as a physical education activity. With the erection of the gymnasium addition

* Prepared by L. R. Divine, President.

costing \$113,433 and with the addition of \$4,655 worth of new equipment, we now have a very complete physical education department, having, in addition to an enlarged gymnasium, which is adequately supplied with horizontal bars, flying rings, climbing ropes, etc., a swimming pool twenty-five by seventy-five feet in size, two excellent bowling alleys, and recreational rooms for both boys and girls.

ATTENDANCE

The attendance of the children during the year has fallen off considerably. This is not unusual. Every two or three years there is a demand for the children's services on the farms that keeps them detained at home for a year or so. This year's attendance has been 235. Each year there are from thirty to forty new applicants admitted into the school, and there is a slow but steady growth in the number of pupils who attend the school.

TEACHING STAFF

Due to the fact that the education of the deaf child is highly specialized and demands from the teacher are so many, it has been accepted that the best work can be accomplished with only ten children to the teacher, and that is why our teaching staff may seem heavy in comparison with the public school. We have thirty-one academic teachers and fifteen vocational teachers. Our teaching staff is well balanced and we have received favorable comment from national organizations for the work that is being done.

SUPPORT

The State maintains and supports this institution by legislative appropriation for the education and care of the children. Complete maintenance and minor hospitalization are free to the children who attend the institution. For the biennium the Legislature appropriated \$140,000 per year; however, last September it was pointed out that \$140,000 for the 1939-1940 scholastic year would be insuf-

ficient due to a greatly increased physical plant, and in view of the fact, Superintendent Harris was successful in urging the Governor and the Board of Liquidation to appropriate a special fund of \$15,000, thus making our biennial appropriation for the period 1938-1940 amount to \$295,000.

ACTIVITIES ON CAMPUS

In addition to the general high-school course of study and a well-rounded vocational training, we have on our campus the extra-curricular activities of Boy and Girl Scouts, who have done exceptionally good work.

Our varsity teams are in the State Athletic Association as B-class teams and have made a reasonably good record.

Education tours in our school bus are beneficial to the children.

NEEDS

While we are jubilant over the recent additions to our physical plant and will be able to offer our children many more opportunities toward receiving an education, we are still in serious need of a small hospital. The general health of a deaf child is below that of a normal child and under the present housing accommodations it is impossible to ward off an epidemic among the children whenever influenza or any juvenile disease attacks them. If we were able to segregate the children in a small hospital, we believe that it would be of great benefit to the children and a saving in classroom time, money and health.

The construction of our new buildings has greatly reduced our campus which is the only playground our children have, and in view of the fact that the time will come when there will be approximately four hundred children in attendance here, we are in serious need of additional ground. Being situated in the city, as we are, there is of course no available ground with this exception; to the east of us there is a plot of ground known as the Asia Street School. This school building has been condemned and is not in use. We respectfully urge that this plot of ground be added to what is now the Louisiana State School for the Deaf.

STATE SCHOOL FOR THE BLIND*

BATON ROUGE, LA.

The State School for the Blind is designated in the Constitution of Louisiana as an institution of higher learning and the Legislature is required to make appropriations for its maintenance and support, on the recommendation of the State Board of Education. For each of the years, 1938-39 and 1939-40, it received an appropriation of \$55,000.00. Of this amount approximately \$36,000.00 per year is spent for salaries and the balance for food supplies, equipment, public utilities, insurance, hospitalization, and miscellaneous items.

The staff of employees consists of 21 instructors and helpers, six matrons, a nurse, three doctors, a yardman, a night watchman, a gardener, a porter, and 12 maids. There are enrolled 72 regular students, 8 specials and 5 graduates of the school who are attending the University.

The instruction offered consists of a regular literary course covering elementary and high-school work, courses in various types of music, and vocational courses. Many extra-class activities are provided, such as: Scouting, social parties, plays, and games.

Many of the buildings are old, but they are kept in good repair. The grounds are well landscaped and beautifully set in trees, shrubs, and flowering plants.

The building recently financed by the State Board of Education is nearing completion. It will provide a gymnasium, a bowling alley, a swimming pool, a music studio with three practice rooms, and a room for the operation of a typical vending stand.

* Prepared by Y. L. Fontenot, President.

STATE SCHOOL FOR NEGRO DEAF* SOUTHERN UNIVERSITY

SCOTLANDVILLE, LOUISIANA

The curriculum of the State School for the Negro Deaf has been organized around the three-fold development of the child, as follows:

- (1) Academic instruction intended to improve him intellectually and inculcate speech
- (2) Industrial program and boys and girls to prepare them to become useful citizens capable of earning an independent living
- (3) Recreational and extra-curricular activities
 - a. To teach them how to adjust themselves to live harmoniously and happily in an increasingly complex society
 - b. To promote recreational activities which will develop healthful hobbies and promote worthwhile leisure in later life.

Level of Instruction.

Pupils are taught to live more effectively in their immediate and expanding environment through participation in activities involved in carrying out the basic functions of human living: Communicating, Recreating, and Playing.

Academic Organization

- (1) First Preparatory
- (2) Second Preparatory
- (3) Third Preparatory

The above-named courses are intended to prepare the deaf child to pursue a course in elementary education organized with the regular graded books.

Industrial Offerings

Girls: The industrial program for girls includes three important phases of home economics:

* Prepared by F. G. Clark, President.

- (1) Plain sewing, which will enable them to make clothes. They also are taught how to renovate and mend old clothes. Socks and other discarded and inexpensive materials are converted into useful garments. Embroidery and fancy work are also taught so that they may be utilized in making the home attractive.
- (2) Housekeeping is included as a regular part of this course. Girls are taught to care for the home and launder clothes correctly.
- (3) Cooking is offered to enable the girls to prepare simple meals and serve them correctly.

Boys: The industrial program for boys is organized as follows:

- (1) A modern shop equipped with the necessary tools is provided and boys are taught cabinet-making, framing, and repair work.
- (2) The agricultural course gives the boys the opportunity to participate in the cultivation of a year-around garden for the school. This course also includes poultry raising.
- (3) The State, in an effort to prepare the boys for vocations in floriculture, has furnished azaleas, camellias, roses, shrubbery, and other seasonal plants and shrubs. They are also given training in the use of native shrubbery in landscaping.

Physical Education

The physical education program includes the physical development of the child and the development of good health habits. The course for boys includes muscular exercises, relay races, basketball, ping pong, and drilling. The course for girls includes calisthenics, relay races, pyramids, stunts, volley ball, and ping pong. The course is organized so that the child will be acquainted with popular games, developmental exercises, and recreational activities.

Dormitory Life

The dormitory life for boys and girls is made as home-like as possible. Pupils are taught Biblical information in keeping with their level of instruction and experiences in general Sunday school routine.

STATE SCHOOL FOR NEGRO BLIND* SOUTHERN UNIVERSITY

SCOTLANDVILLE, LOUISIANA

The School for Negro Blind was established at Scotlandville, Louisiana, 1922. It offers full educational opportunity to visually handicapped boys and girls from the primary grades through high school. All subjects taught, as nearly as possible, are the same as those taught in other schools of the State. The revised form of English Braille is used. Besides the regular subjects, the following vocations are taught: (*for girls*) sewing, cooking, crocheting and knitting; (*for boys*) chair caning, broom, mattress, and mop making; (*for both*) typewriting, weaving, basketry, and music.

There is no charge for tuition, maintenance, or school supplies. The student body consists of blind and partially blind Negro boys and girls between the ages of six and twenty-one years. Pupils stay in school during the regular school term only and go to their homes for vacations.

The health of the children is taken care of by a medical doctor, an eye, ear, nose and throat specialist and a school nurse.

The food of the children is well prepared and meals are carefully planned by the school's dietitian.

After finishing high school here, the students who desire to further their education enter Southern University for their college work. The blind college students board at the School for the Blind, doing enough work to cover board and maintenance, and the School, in co-operation with the

*Prepared by F. G. Clark, President.

State Rehabilitation Board, provides them with readers. The college students do exceptionally well. Up to this time we have had nine students to enter college, five of whom have graduated and are now making an independent living. At present, we have two students attending Southern University.

Our daily schedule is as follows:

Rising Bell.....	5:30 A.M.
Breakfast	6:45 A.M.
School	8:00 A.M. - 4:00 P.M.
Dinner	12:30 P.M.
Supper	5:30 P.M.
Recreation Hours.....	6:00 - 7:00 P.M.
Study Hour.....	7:00 - 9:00 P.M.
Retire	9:30 P.M.

A. Per Capita of Population				\$ 13.21\$	\$ 15.98\$	\$ 12.83\$	\$ 11.38\$	\$ 11.90\$	\$ 13.71\$
B. Per Pupil Regis. (White or Negro)				\$ 63.52\$	\$ 73.04\$	\$ 67.63\$	\$ 60.91\$	\$ 64.25\$	\$ 61.11\$

* 1890-1900.

Part II

STATISTICAL STATEMENT

OF THE

OPERATION OF THE SCHOOLS

OF THE STATE

1938-39

TABLE I

FINANCIAL REPORT OF THE STATE DEPARTMENT OF EDUCATION

Item	Expended by State Department	Apportioned to Parishes	Total
1	2	3	4
I. State Appropriation for Maintenance:			
1. Salary of state superintendent	\$ 7,500.00	\$.....	\$ 7,500.00
2. Office salaries	97,100.00		97,100.00
3. Office expense.....	12,902.71		12,902.71
4. Per diem and expenses state board	3,054.71		3,054.71
5. Traveling expenses.....	16,497.06		16,497.06
II. Free Textbook Fund:			
6. Administration	12,961.14		12,961.14
7. Purchase of Textbooks ¹			
8. School Supplies (paper & pencils) ¹			
9. Library books ¹			
III. Federal Board of Vocational Education:			
10. George-Deen Fund.....	23,464.08	327,054.72	350,518.80
11. Smith-Hughes Fund	12,420.93	125,108.71	137,529.64
12. Civilian Rehabilitation	2,683.36	33,306.14	35,989.50
IV. Special Funds:			
13. General Education Board.....	11,077.36	1,400.00	12,477.36
14. Anna T. Jeanes Fund.....		3,546.98	3,546.98
V. State Public School Fund:			
15. Apportionment based on educables		9,911,600.00	9,911,600.00
16. Apportionment based on equalization		2,907,046.37	2,907,046.37
17. Amount paid for 5.37% retirement fund.....		417,862.81	417,862.81
VI. Sixteenth Section Land Fund:			
18. Interest on land sold before 1880		38,118.02	38,118.02
19. Interest on land sold since 1880		78,591.81	78,591.81
Totals.....	\$ 199,661.35	\$ 13,843,635.56	\$ 14,043,296.91

¹ Purchased by State Printing Board. Records not in State Department of Education.

¹ Includes grants from Public Works Administration aggregating \$2,276,452.60.

² Non-revenue receipts result from incurring debt of the depletion of school property. They are not derived from taxes and do not increase revenues.

³ Loans from banks do not increase the income for the schools. They are temporary loans that must be repaid within the fiscal year.

¹ Includes children transported to private schools.
² One motor bus transports 53 negro children at a cost of \$280.00 or an average of \$5.28 per child.
³ Four motor buses transport 311 negro children at a cost of \$2,640.00 or an average of \$8.49 per child.
⁴ Five motor buses transport 134 negro children at a cost of \$2,599.05 or an average of \$19.49 per child.
⁵ One motor bus transports 65 negro children at a cost of \$640.00 or an average of \$9.85 per child.
⁶ Two motor buses transport 53 negro children at a cost of \$1,350.00 or an average of \$25.47 per child.
⁷ Three motor buses transport 118 negro children at a cost of \$1,190.00 or an average of \$10.08 per child.
⁸ Two motor buses transport 463 negro children at a cost of \$1,974.84 or an average of \$4.27 per child.
⁹ One motor bus transports 45 negro children at a cost of \$450.00 or an average of \$10.00 per child.
¹⁰ Seven motor buses transport 230 negro children at a cost of \$3,310.00 or an average of \$14.39 per child.
¹¹ Three motor buses transport 162 negro children at a cost of \$1,408.56 or an average of \$8.69 per child.
¹² Two motor buses transport 57 negro children at a cost of \$1,207.50 or an average of \$21.18 per child.
¹³ Ten motor buses transport 617 negro children at a cost of \$5,507.95 or an average of \$8.92 per child.
¹⁴ Parish medians are reported in columns 5, 9, and 10.

Number of High School Teachers Employed, 281.

TABLE XV—Continued

STATE-APPROVED FOUR-YEAR HIGH SCHOOLS—NEGRO

The schools listed below are State-approved high schools doing four years of standard high-school work. These schools do not quite meet the same standards as the State-accredited schools with reference to physical plant, teaching equipment, and quality of teaching but the quality of work and the facilities are such that the State is justified in approving them. Colleges are not required to accept the graduates of these schools without examination.

¹ Data for Northeast Center at Monroe included.

² Total number employed during regular and summer sessions. Summer sessions reduced to basis of regular session and added to it.

³ Does not include additional pay for summer schools. Institutions were requested to deduct withdrawals and to report net registration by quarters. Registration for the year of four quarters is reported in terms of the regular academic year of 36 weeks—an accepted standard. The average registration of the summer session of 12 weeks was reduced to the basis of the regular session by dividing by 3 and then added to the average registration during the three quarters of the regular session.

⁴ Short courses, lecture series, etc., not included.

⁵ Figures from 1937-38 report.

¹ Registration for the year of four quarters is reported in terms of the regular academic year of 36 weeks—an accepted standard. The average registration of the summer session of 12 weeks was reduced to the basis of the regular session by dividing by 3 and then added to the average registration during the three quarters of the regular session.
