**REPORT TO THE GOVERNOR, THE
LEGISLATURE, AND THE STATE
BOARD OF EDUCATION**

Baton Rouge, Louisiana
December 20, 1945

Governor James H. Davis, Members of the State Legislature,
and Members of the State Board of Education

Gentlemen:

In compliance with the provisions of Act 100 of 1922, I am transmitting to you the annual report of the State Department of Education for 1944-45. Following our usual practice, we have divided this report into Parts I and II. Part I includes narrative statements prepared by the division heads in the State Department of Education and edited by the Supervisor of Research and Special Services; Part II includes the compilation of statistics reported by the various superintendents of schools in the sixty-four parishes and three independent city school systems. The statistical section gives complete information on finances, pupil accounting, teachers' salaries, and numerous other topics of interest. These data afford an excellent source of information for a complete study of statistical problems relating to the public schools.

During the 1944-45 session, the schools have undertaken many worthy projects in addition to the usual routine activities. The progress made in the transition to the twelve-grade school program is of far-reaching importance. The close of this session brings us one year nearer the complete transition which places within the reach of every child a complete twelve-grade educational offering. During the year, the supervisory staff has prepared courses of study for the seventh and eighth grades which provide a richer and more diversified offering for children in these grades. It so happens that the very nature of the reorganized program is such that the work of these grades is affected far more than that of

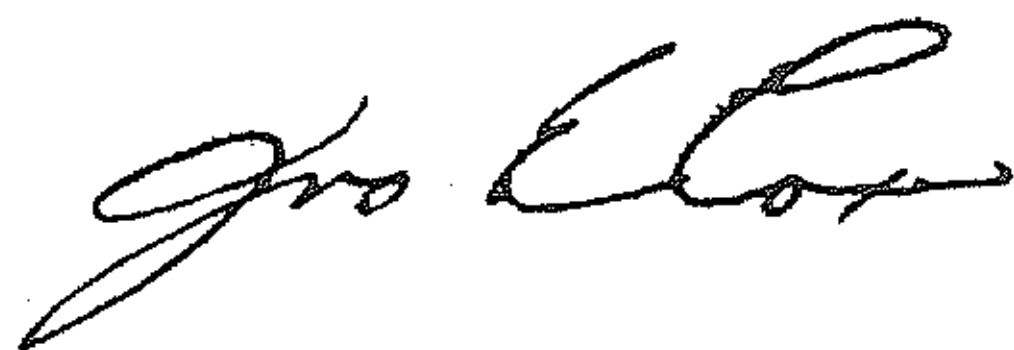

any other grade level. Noteworthy improvements have been made in the vocational education offering, although there has been a shortage of teachers in this important field.

The department has aided approximately one-third of the parishes through organizational studies which have been made by a committee of staff members. The studies point the way to a more effective school organization and to the provision of an enriched curriculum.

I wish to direct your attention to two major problems which confront the schools at this time. The first of these problems is that of providing adequate educational facilities to house all children, regardless of the communities in which they live and regardless of race. The second major problem is that of providing adequate salaries to attract and retain the best talent among our youth in the teaching profession. Although you have made liberal appropriations for the schools, there is still a need for additional funds. The state and nation must recognize the responsibilities of a democratic country to provide an intelligent and well-educated citizenship. They must provide adequately for the physical facilities and for trained personnel to man the schools. Only through such action can we hope to have our country continue to occupy the high place which it has achieved among the nations of the world.

I extend to you thanks on behalf of all the school boards, superintendents, principals, and teachers for the splendid attitude which you have manifested toward the schools, and I beseech your continued support in providing additional improvements to be made in our school system.

Respectfully submitted,

State Superintendent of Education

LETTER OF TRANSMITTAL

Baton Rouge, Louisiana
December 15, 1945

Superintendent John E. Cox
State Capitol
Baton Rouge, Louisiana

Dear Sir:

The annual report for the State Department of Education for 1944-45 is attached hereto. This report is composed of the usual narrative and statistical sections. The narrative section contains statements prepared by members of the supervisory staff of the State Department of Education which have been edited by this division; the statistical section includes data compiled from the annual reports submitted to this office by the parish and city superintendents of schools.

I wish to express appreciation of the assistance rendered in the preparation of the narrative reports by the following members of the staff: Joseph E. Gibson, R. R. Ewerz, J. M. Boyet, Clarence Scheps, C. E. Laborde, J. B. Myers, D. C. Lavergne, Miss Alma Schmalzrid, Miss Blanche Trezevant, S. R. Emmons, Miss Caro Lane, Robert C. Gilmore, J. E. Williams, Miss Sue Hefley, Miss Clyde Mobley, Miss Lela Tomlinson, Mrs. Ruth Kean, Andrew Triche, Seid W. Hendrix, and Donovan R. Armstrong.

Part II, the statistical section, was prepared chiefly by Normand H. Edwards with the assistance of the other employees in this division. They have been painstaking in their efforts to prepare accurate and complete tables. The splendid services which they have rendered in the preparation of this report are recognized and deep appreciation goes to them for faithful and efficient service. I also wish to express appreciation of editorial assistance rendered by Miss Sue Hefley, supervisor of school libraries, and by Mrs. Dallas Kent, educational news editor.

Respectfully submitted,

M. S. ROBERTSON, Supervisor
Research and Special Services

ADMINISTRATION

Introduction

Educational leaders recognize the fact that the most important contribution to the nation's welfare, either in time of peace or in time of war, is to provide an educated and intelligent citizenship. Hence, the 1944-45 school year found educational groups in Louisiana more deeply engrossed in aiding the nation's program for winning the war than at any time in the past. The fulfilling of this purpose has been a major function of the educational program during the session. School officials, teachers, and children contributed their share in promoting and carrying forward the war activities not only because of the immediate necessity of achieving the goals sought in waging a successful war program at home but because of the civic effects that these activities have on the youth of Louisiana in developing a keener sense of civic responsibility and a deeper devotion to the nation and the principles for which it stands. In no instance have the schools hesitated or failed to contribute their just share in organizing and carrying forward their part of the war services.

The State Department of Education has centered its efforts on providing leadership in a well-rounded educational program. The plans have centered in the provision of an adequate twelve-grade school program for all the children of the state, the enforcement of the new attendance law with the view of bringing every child into the classroom, the provision of adequate materials of instruction suitable for the use of the schools of a democracy, the development of a more effective vocational education offering, the extension of the financial program to aid in providing and maintaining good facilities, manned with the best available teachers, and in offering advice and assistance to the superintendents and school boards in organizing their school efforts in such a manner that the money spent on the schools would provide the greatest amount of good for the money invested.

PART I

THE STATE'S EDUCATION PROGRAM

Materials of Instruction

The most urgent problem of the session was the procurement under wartime conditions of instructional materials for the new eighth grade. In June, 1944, the State Board of Education approved the general proposals and recommendations of the special committee studying the twelve-grade school program, making it possible for parish school boards to add the twelfth grade immediately. Fifteen parishes effected the addition, enrolling 7,423 pupils—approximately 22 per cent of the potential enrollment for the entire state.

Publishers were invited to submit suitable materials for courses in English, reading and literature, mathematics, social studies, science, health, physical education, and safety, home economics, agriculture, industrial arts, business education, and foreign languages. The State Board of Education approved the recommendations of the textbook committees on August 15, 1944. Books were supplied by the publishers with a minimum of delay. The remainder of the pupils, approximately 78 per cent, will be supplied during the session 1945-46.

The allotment plan was revised to supply a complete set of books for each pupil and to make the plan effective as of August 15, 1944. The average cost per pupil of supplying free textbooks increased only from \$1.06 for 1943-44 to \$1.19 and the number of books increased from 913,050 to 961,777.

Interest in educational aids increased. Library books, maps, globes, charts, recordings, filmstrips, and other instructional materials were purchased in increased quantities. Shortages of paper, cloth, and other items, plus a reduction of labor and press facilities available to civilians, resulted in withdrawal by publishers of some desirable materials and delay in publication of many new items. Parish accounts were again credited for materials ordered but not available.

Films in the regional libraries were evaluated and placed in good condition. Committees were organized to assist the Section of School Libraries in preparing a list of new titles. The capacity of the film libraries was more than doubled

and administrative procedures improved through a series of conferences attended by all directors and their assistants. Several parishes increased their film collections and audio-visual equipment; others made initial purchases. A substantial increase in the use of audio and visual aids is a reasonable assumption from the increased interest shown.

The division worked with similar agencies in other states in presenting common problems to the War Production Board and the War Manpower Commission. With the assistance of senators and congressmen of the Southern States, priorities were obtained for the manufacture of books approved by state educational authorities.

Manufacturing standards and specifications for books were studied and reasonable levels maintained, although many substitutes were necessarily accepted. Government regulations required lighter paper by weight, and reduction of quotas to manufacturers resulted in deliveries of school supplies in several quarters rather than in two shipments as for pre-war sessions.

Research and Special Services

It has been the responsibility of the Supervisor of Research and Special Services to prepare the various reports and directories, to handle numerous questionnaires relative to the schools, to direct the classes for crippled children, and to handle the numerous other activities which fall within the range of research and special services in the State Department of Education.

Organizational Studies

The most far-reaching and helpful activity of the Supervisor of Research and Special Services was participation in the organizational studies of approximately one-third of the parish school systems. These studies were made by a committee under the chairmanship of the Supervisor of Research and Special Services with representatives of School Plants and Transportation, Elementary and Secondary Schools, and Negro Education. The studies were initiated by the parish school boards who adopted resolutions re-

questing the State Superintendent of Education to have a committee of his staff study the organization of the schools of the parish and prepare a report including the findings and the recommendations of the committee. The studies varied in the different parishes, depending on the needs of the parish in question and the particular problems which the school officials had designated as desirable for study.

Field Work. The field work of an organizational study included several days in a parish. Each member of the committee went to the parish and, in company with the superintendent, the assistant superintendent, or the supervisor, visited as many of the schools as possible, collecting the necessary information relative to the schools. The Assistant Supervisor of School Plants and Transportation, assisted by the superintendent, principals, and bus operators, prepared a spot map showing the home location of every child transported to school, and he ascertained the number of children who walk to each school. This information was used in the preparation of a complete spot map which is a revealing factor in determining the school needs of the parish. Each principal, assisted by his faculty, prepared a list of all the pupils in the school, giving the grade, the date of birth, and the age of each pupil. The superintendent prepared from his files lists of the schools showing the type of organization, the registration and membership by grades in each school as shown by the most recent monthly report of the principals, the number of teachers, the total annual salary in elementary and secondary departments, and any other pertinent information.

Compiling the Report. When the data were collected in the State Department of Education, different members of the committee devoted attention to the preparation of certain phases of the report. As a usual rule, the report was divided into five parts, including a general statement, organization of the schools, school plants, transportation, and summary. The general statement included such sub-topics as the topography of the parish, population trend over a period of ten years, the financial receipts from state and parish sources, school lunch program, membership by

grades, age-grade distribution of children, administration of the schools, the over-all program in the parish, and the visiting teacher. The statement on organization of the schools presented the present conditions, including tables showing by schools the registration, the type of organization, number of teachers, pupil-teacher ratio, aggregate annual salaries of teachers; the annual per-pupil cost of teachers' salaries for elementary and secondary departments; a set of guiding principles for use in setting up the recommendations; and, finally, a recommended program. The recommended program pointed out specifically the type of organization recommended for each school and the desirability of providing a rich and varied educational offering and made specific recommendations in table form, showing the number of teachers recommended for each school, the probable registration, and the resulting savings from the reorganized program. The section on school plants and facilities included information on twenty-three items important to the school plant. It also included a table showing the registration by schools over a ten-year period, as well as the population map previously referred to and specific information pointing to the desirability of the proposed organization of the schools of the parish. The transportation report gave a general statement followed by a list of transfer routes, including information on the chassis, body type, ownership, capacity, pupils transported, number of trips, the minutes en route one way, the miles of paved, graveled, and dirt highway traversed, and the average per-pupil cost of transportation based on registration. Following this was a recommended program for transportation, including the location of each recommended route. Two maps, one showing the home location of the children and another showing the route to be followed by each bus, played an important part in this section of the report. Finally, a statement was made about the possible savings on transportation, basing the estimates on a reasonable schedule of payment of bus operators.

Presenting the Report. One of the most important phases of the report was its presentation to the school board. Two or

more members of the committee met each school board and superintendent for the purpose of presenting a unified report. Each report consumed from one-half day to an entire day. The committee presented the complete report, pointing out the essential details and directing special attention to recommended changes and possible savings and advantages to be gained by the adoption of the report. Without exception, the school boards showed a keen interest in the reports and a recognition of the value of the organizational study; although, in some instances, boards have been reluctant to adopt the recommendations because of local pressure to retain certain schools in operation in small communities, thereby preventing desirable consolidation.

Typical Findings. As a usual rule, the population trend in the rural parishes was downward. However, in a few war-affected areas the committee found increases in population. Specific attention was directed to the increases in the state's contribution to the support of the schools and particularly to the increase in the per cent of the total support from the state and the decrease in the support from parish and local sources. As a rule, the committee was able to point to the possibility of organizing a more effective school program with fewer teachers and a corresponding saving in teachers' salaries if the prevailing salary schedule were employed. Without exception, the committee found it possible to recommend relatively large savings on transportation while providing adequately for the transportation. Among other things, the committee recommended improvements in school buildings and facilities wherever these were needed, pointing to the desirability of having adequate classroom, laboratory, and lunchroom facilities in each school and gymnasium-auditorium facilities in the larger schools. It is apparent that, with few exceptions, other parishes need the organizational studies to assist the superintendents and school boards in making an objective and impartial appraisal of the school conditions so that they, in turn, may apply the suggestions for improvement whenever and wherever it is possible to do so.

Classes for Crippled Children

The 1944 legislature appropriated \$20,000 for the education of crippled children during the 1944-45 session and \$25,000 for the same purpose during the 1945-46 session. Early in the fall of 1944, requests for information relative to the need of classes for crippled children were sent to all parish superintendents of schools and they were urged to request money from the fund to aid in financing classes for crippled children. These requests were tabulated showing the proposed classes—regular classes, hospital classes, and groups for individual instruction; the number of classes to be conducted and the size of each group; the total funds needed for the operation of the classes; the amount expected from other than state or parish sources; and the balance needed from state and parish to meet the entire cost. An estimate was made of the proportionate part of the entire cost to be paid by parish and state that could be paid from state funds. It was found that the state appropriation of \$20,000 made it possible to allocate to the twelve parishes that requested a share of this fund 81.3 per cent of the total estimated expenditure from public funds. This formula for distribution was approved by the State Board of Education; and in compliance with the instructions of the Board, the money was distributed to the following parishes in the amounts named: Avoyelles, \$650.45; Caddo, \$5,284.91; Calcasieu, \$193.18; East Baton Rouge, \$1,942.21; Lafayette, \$365.88; Lafourche, \$300.83; Natchitoches, \$105.70; Orleans, \$7,750.10; Ouachita, \$2,024.53; Rapides, \$975.68; St. James, \$162.61; St. John, \$243.92; Total \$20,000.00. Superintendents were requested to keep a careful record of all expenditures for crippled children so that any unexpended balance left in a parish could be charged against the parish in allocating the funds for the education of crippled children during the 1945-46 session.

It was found at the end of the session that the money had been distributed for the education of 5 regular classes with an enrollment of 62, 3 hospital groups with an enrollment of 38, and 19 groups for individual instruction consisting of 24 persons. This made a total of 124 crippled children reached with instruction. From every community where a

class for crippled children was taught enthusiastic reports came of the splendid benefits to those who participated.

In submitting this report, deep appreciation is expressed to the parish units of the Louisiana Society for Crippled Children, to the parish units of the Louisiana State Board of Health, and to other interested groups for the splendid co-operation which they gave in promoting and making possible the successful operation of the classes for crippled children.

School Attendance

Public opinion in the early decades of the last century brought about the establishment of free public schools. The idea that education was to be made compulsory came later. Public authorities had difficulty at first in taking care of those who wanted to go to school, without concerning themselves about those who did not want to go. Instead of taking a census of children of school age as a basis for determining needed school facilities, Louisiana in 1823 enacted a law requiring parents or guardians "to make known" to the commissioners of their respective townships "the number of pupils which such parents or guardians respectively wish to enter in school." However, as public opinion to the effect that every child is entitled to free public education crystallized, it was accompanied by the acceptance of its correlative; namely, that every child must attend school.

The first requisite of an efficient school system is that it reach 100 per cent of its children as nearly as possible 100 per cent of the school session.

School attendance was given renewed impetus by the enactment of the Louisiana Compulsory School Attendance Law, Act 239, of the Regular Session of the Legislature of 1944. This law provides for the attendance in a public or private day school of every child between the ages of 7 and 15 for a period of 180 days or for the full session of the public school which the child would normally attend. The responsibility for the child's attendance is placed on the parent or guardian.

In order to facilitate the program of regular school attendance, each parish school board is directed to employ one or more visiting teachers. Temporary requirements set up by the State Board of Education for one to serve as visiting teacher call for the person to hold a I-B certificate; i.e., he must have a degree plus five years' teaching experience. Too, this person must have taught two of the last five years. To meet permanent qualifications, those visiting teachers who are temporarily authorized to serve must earn by July 1, 1947, nine semester hours of college work related to the visiting teacher field. A three-week workshop for visiting teachers was held at Louisiana State University July 23-August 10 in which three semester hours of college credit were earned.

Thirteen parishes employed visiting teachers from the inauguration of this program in the fall of 1944. Twelve parishes appointed supervisors or principals to act as attendance officers, and, in other instances, parish superintendents wrote letters to parents of children who were not in attendance at school.

The new school attendance law was given wide publicity; and as a result of the work done by parish school officials and others, school attendance was improved greatly throughout the state.

The State Board of Education by resolution authorized and directed the taking of a school census which was done from April 1 through June 30. This was a census of all children from birth through 18 years of age. As a result, a better picture of non-school attendance of children of school age was obtained.

With the opening of another school year, a majority of the parishes will have appointed visiting teachers, and school enrollment and attendance will be accelerated.

School Plants and Transportation

The Section of School Plants and Transportation has been and is primarily concerned with aiding the parish school

system in planning programs of building and renovation of school plants so as to provide for the best possible educational programs within the parishes. Several factors determine what program of building and renovation should be followed in a particular parish; such as, the distribution of pupil population, the geography of the parish, and the present school-plant facilities within the parish, as well as the financial ability of the parish to finance the program.

Through this planning, it has been definitely pointed out that there has been over-building in several communities within the state and that building programs have been inaugurated in numerous instances without adequate study or any study, for that matter, of the school needs. This section is actively participating in helping parish school systems make comprehensive studies of the entire educational program within the parish and, upon the basis of facts gathered in these studies, to develop school plants which will adequately serve the schools in the parish.

This section has worked actively with school officials and architects employed by parish school boards in the actual preparation of plans and specifications for all types of school buildings. Generally, the school-building needs from an educational standpoint have first been determined. Then preliminary conferences have been held by local school officials, school architects, and the supervisors of this section, resulting in the drafting of preliminary plans by the architects. These plans have been further studied and refined in conferences with local school officials, supervisors of special subject-matter fields in the State Department of Education, and architects. Such study and planning give promise of developing much better and more usable school plants throughout Louisiana and are in keeping with the best schoolhouse-planning procedures throughout the nation. After plans and specifications have been thus developed, they are presented to the State Department of Health and the State Fire Marshal for their criticism or approval. These two agencies likewise have rendered and are rendering valuable service to the schools of Louisiana in securing safe, sanitary, and well-lighted school buildings.

A second and equally important activity of this section has been concerned with the provision of safe, efficient, and economical transportation for the more than 150,000 children who are daily transported to and from school. The supervisors have worked co-operatively with the school officials and the Office of Defense Transportation in securing 279 new school-bus chassis. Practically all of these chassis have been mounted with approved, standard, steel bodies, each capable of providing safe and comfortable transportation for from 45 to 84 pupils. Too many children are still being transported in improvised, unsafe, and inefficient vehicles which are capable of transporting only a small number of pupils at one time. The supervisors are working with the National Safety Council and the U. S. Office of Education in helping to devise nation-wide standards for school transportation equipment to transport loads varying from the small loads found in some isolated rural areas to the very large loads found in the thickly-populated sections of the state. A new compilation of such standards will be completed for distribution to the school officials within the near future.

Upon invitation of parish school boards, the supervisors of this section made careful studies of the school transportation systems of 18 parishes and pointed out that the number of transportation units in these parishes could be reduced from 661 to 503, thus saving 158 units. If similar reductions could be made in the other 46 parishes, the total of 2,669 transportation units used to transport white pupils should be reduced to approximately 2,000. These recommended decreases in the number of transportation units are made possible by the substitution of standard school busses for small pick-up trucks and other improvised equipment; by the careful planning of transportation routes so as to avoid overlapping, unnecessary services, and a lack of co-ordination in the routing of school busses; and by the provision for second trips within thickly-populated areas near the schools.

One of the most important activities of this section has arisen from the realization that Louisiana is spending far too

much money for the transportation of white children and is providing transportation for relatively few of the Negro children. During the session 1943-44, Louisiana spent for transportation approximately \$12.75 out of each one hundred dollars for the current operation of the schools, thus ranking third from the top among the states in the percentage of total school expenditures to be spent for transportation. During that session, Louisiana spent for transportation an average of \$23.03 per pupil; while comparable neighboring states spent much less; for example, Alabama, \$11.99; Florida, \$17.05; Georgia, \$17.47; North Carolina, \$6.27 for public and \$10.90 for contract; South Carolina, \$18.93; Virginia, \$15.43; and West Virginia, \$15.28.

While planning of transportation routes and a proper organization of the transportation system within the parishes can do much to lessen the excessive cost of transportation, this cost cannot be reduced to an amount comparable with that spent in many neighboring states unless central purchasing or contract pricing is initiated and unless public ownership and public operation of school busses are practiced generally throughout the state, just as in the majority of the other Southern States. Many parishes have taken over ownership and operation of a large percentage of the busses; several others have instituted public ownership and operation of busses by purchasing those needed for replacement; and one parish has inaugurated public ownership and operation of all of its school busses. Procedures are being studied and plans are being made for instituting central purchasing or contract pricing for publicly-owned new school bus units.

HIGHER EDUCATION

General Statement

The colleges and special schools under the control of the State Board of Education are included in the Division of Higher Education. These ten institutions are:

- Northwestern State College of Louisiana
- Louisiana Polytechnic Institute
- Southeastern Louisiana College
- Southwestern Louisiana Institute
- Southern University (the Negro land-grant college of Louisiana)
- Louisiana Negro Normal and Industrial Institute
- Louisiana State School for the Deaf
- Louisiana State School for the Blind
- Louisiana State School for the Negro Deaf
- Louisiana State School for the Negro Blind

The budget summaries and other statistical data of these institutions are given elsewhere. Also in the Division of Higher Education there is the Division of Teacher Training and Certification of the State Department of Education.

The Director of Higher Education is responsible for the general administration of the above-named institutions and for state administration of teacher education and certification. His duties have been described in detail in previous reports and need not be set forth here. Because of lack of space, only the more notable events of the year will be enumerated.

Navy Units To Be Discontinued

The Navy V-12 units at Louisiana Polytechnic Institute and at Southwestern Louisiana Institute and the Navy V-5 unit at Northwestern State College of Louisiana were being rapidly tapered off toward the close of this year. An announcement had already been made that they would be discontinued as of November 1, 1945. By the same token, civilian enrollment was increasing. Cumulative enrollment figures are given below:

Cumulative Enrollment for Session 1944-1945

	Regular Session 1944-45	Summer Session 1945	Total
Northwestern State College of Louisiana.....	1121	766	1887
Louisiana Polytechnic Institute....	1589		1589
Southeastern Louisiana College....	278	158	436
Southwestern Louisiana Institute...	1922		1922
Southern University.....	919	322	1241
Louisiana Negro Normal and Industrial Institute.....	245	358	603
Louisiana State School for the Deaf	258		258
Louisiana State School for the Blind.	69		69

Important Policy Actions by the State Board of Education Affecting the Colleges and the Special Schools

A revised salary schedule for Louisiana Polytechnic Institute, Northwestern State College of Louisiana, Southeastern Louisiana College, and Southwestern Louisiana Institute was adopted by the Board on August 1, 1944. The schedule is as follows:

(This schedule does not abrogate rule 6 of the 1938 salary schedule)

	Minimum	Maximum*
Instructor	\$1,500.00	\$2,000.00
Assistant Professor.....	2,100.00	2,600.00
Associate Professor.....	2,700.00	3,200.00
Professor	3,300.00	3,800.00
Dean (Academic)	4,100.00	5,400.00

The college president may recommend as much as \$200.00 additional for the head of a large department.

Budgets for 1944-45

The 1944 Legislature appropriated funds for the biennium 1944-46 in line with the budget requests of the State Board of Education. This enabled the Board to adopt budgets for 1944-45 for the colleges and special schools with materially increased salaries for faculty members. (See tables in this Report and comparative tables in the State Superintendent's Report for 1943-44.)

New Departments and Changes in College Programs Approved by the Board During 1944-45

On January 8, 1945, the State Board of Education approved

*For 36 weeks' employment except for deans who are usually employed on a yearly basis.

the report of a special committee providing for a four-year curriculum in agriculture at Southeastern.

On January 29, 1945, the Board amended the state plan for vocational agriculture to authorize Southwestern Louisiana Institute to apply to the U. S. Office of Education for approval as an institution for the training of teachers of vocational agriculture. Approval by the U. S. Office of Education has since been received.

On May 8, 1945, the Board approved the reorganization of Northwestern State College of Louisiana into three schools; namely, school of education, school of arts and sciences, and school of applied arts and sciences.

On May 8, 1945, the Board approved courses in collegiate nursing at Northwestern and Southwestern, courses in industrial arts at Southwestern, and pilot training at Northwestern.

On July 6, 1945, the Board approved the request of the President of Louisiana Polytechnic Institute to change the name of the department of agriculture to department of agriculture and forestry.

Teacher Education and Certification During the Last Year of the War

Table XIX gives the statistics on teacher certification.

Even before Pearl Harbor, the schools were beginning to feel the loss of personnel. During the war, they have suffered serious impairment. Due to the patriotic appeal of the armed forces and attraction of high wages in industry and business employment, Louisiana, like every other state, has lost thousands of its best young men and women from the school rooms. How extensive is this loss is shown by the fact that every year since July, 1942, the State Department of Education has been compelled to issue approximately 1,200 T-certificates to persons who could not meet the regular state certification requirements. Bearing in mind that the regular state certification requirements are minimum requirements, and that under normal conditions, parish superintendents prefer to recommend teachers whose qualifications far ex-

ceed them, we can only guess how far down has fallen the general level of teacher qualifications. Nor does it help Louisiana's situation to say that, because of tenure, retirement systems, and higher salaries, we are better off than some of the other Southern States.

For the post-war period, purposes are expressed and plans are already under way to improve the quantity and quality of teachers. The State Board of Education has already adopted a revised plan of teacher certification prepared by the State Department of Education and a representative committee of state professional leaders. This revision approaches the whole question of teacher qualifications from the viewpoint of general education. This is in recognition of the fact that one of the needs of our schools today having highest priority is that of teachers whose intelligence, education, experience, and whole attitude qualify them to relate school work to the life needs of the pupils.

Another encouraging element in the situation is the widespread public interest in education and the determination on the part of superintendents and boards to provide better schools through the up-grading of teachers in service and the selection of only the ablest of our young people to become teachers. The numerous work conferences being held by parishes and institutions are calculated to bring continual improvement of teachers. Efforts to induce promising young people to prepare for teaching, increased salaries readily voted, and the search for them in the ranks of returning members of the armed forces are bases for encouragement.

Yet the future is not a promising one. The supply of prospective elementary teachers is low. Nine of our white colleges report only 107 graduating in 1945; 79 to be graduated in 1946; and 68 to be graduated in 1947. When you consider that we shall need from 1,500 to 2,000 elementary teachers each year, the end of the shortage of qualified elementary teachers is not in sight, even though many may be expected to return to the schoolroom. Moreover, it is even more difficult to obtain elementary teachers for the rural schools. In these same colleges, only the following numbers who

plan to be elementary teachers expressed a willingness to teach in rural schools:

Of 107 graduating in 1945, only 27;
Of 79 graduating in 1946, only 23;
Of 68 graduating in 1947, only 22.

These are not enough to supply the need of one of our larger parishes.

What can the state, through parish superintendents and school boards, do to meet the need of qualified teachers? The first part of the answer is simple:

First, raise salaries—raise them till teaching can compete with business and industry for the services of the brightest and most promising young people and can hold those excellent teachers already employed; second, raise salaries of rural teachers even above those of town and city teachers to compensate them for the inconveniences and lack of social opportunities of rural life (and let the schools take the leadership in abolishing those handicaps in rural life); but top salaries will not automatically assure top-quality teachers. There is a third "must." It is to exercise the greatest possible resourcefulness in finding and selecting and retaining only those teachers who are the ablest, the most appropriately educated, the most wholesome and the most promising young people to be found anywhere for teaching and inspiring; that is, catching the imagination of the oncoming citizens of the world of tomorrow.

Temporary Requirements for Visiting Teachers

Act 239 of 1944 (the Compulsory Attendance Law) provided that the State Board of Education should adopt both temporary and permanent requirements for the certification of visiting teachers. The temporary requirements were adopted by the Board on August 1, 1944. Since they have been published elsewhere, they will not be set forth here. It is expected that the Board will adopt permanent requirements sometime during the next year as the temporary requirements provide that "all visiting teachers to be certi-

fied on July 1, 1947, and thereafter shall meet the permanent requirements (for visiting teachers) . . ."

Certification Requirements for Music Teachers and for Teachers of Exceptional (Handicapped) Children

The Board on November 3, 1944, adopted certification requirements for music teachers and for teachers of handicapped children, these to be parts of the Revised Teacher Certification Requirements (Bulletin 497) effective July 1, 1947.

ELEMENTARY AND SECONDARY SCHOOLS

Introductory Statement

The record of progress in the Division of Elementary and Secondary Schools is to be found largely in the reports from its various sections, but a statement which will show how these reports fit into a certain pattern may be appropriate and may serve to bring into focus a composite picture of discernible trends.

Evaluation of Current Programs. Progress must grow out of present development. A critical examination of current objectives and practices is basic to procedure in planning for the future. Throughout the reports of supervisors, which follow, there is evidence of such examination. Language arts and home economics are examples of areas in which, as part of the year's program of work, opportunity was provided for evaluation, not only by teachers in the area, but by administrators and patrons. Home economics has provided for evaluation by students also, an obviously effective, but commonly neglected channel for program improvement. Evaluation has been effected by group meetings, by the use of questionnaires, and by committees.

The School as Part of the Community. The school-home-community lunch program and the program in community health education exemplify, as well as any others, identification of the school with the community of which it is a part. Health and nutrition cannot be taught or practiced as properties or attributes of the school or of the community exclusively. Reports of activities in these areas indicate that an educational program is evolving which is the result of the work of administrators, teachers, patrons, and various non-school agencies. This trend toward identification with the community is one of the most significant which is apparent today.

Utilization of Agencies Offering Parallel Services. Again we refer to the health education program for an illustration

of a developing pattern—that of the economical utilization of the services of parallel agencies. The program in this area is the result of planning together by the State Departments of Health and Education with avoidance of costly and wasteful duplication of effort as one objective. The program in library service offers another illustration of the same trend, since a state-wide committee functioning in that area has as its objective the examination of possibilities in co-operative arrangement between service from the school library and service from the public library. Food Production War Training also reports an emphasis upon “working relationships with other organizations, programs, and agencies.” This trend is closely related to that toward identification of the school with the community, and very naturally evolves therefrom.

Services Designed by and for Those Served. We who have assumed the existence of democracy in education (since democracy has long been considered an objective of education) have come to a realization that our assumption has not always been well founded. Planning of educational services has not always in the past been the result of participation by those served. The reports which follow give heartening evidence that planning in many areas is currently the result of a really democratic procedure. Agriculture emphasizes flexibility in its program that it might reflect changing needs of those served by that program. Other groups have included members of PTA and of non-school organizations and clubs in planning for actual curricular content.

Extension of Services. During the war, elementary and secondary education was materially expanded to include service to children of pre-school age and services to adults who desired a special kind of skill training for the war emergency. In addition, expansion of service has been effected for at least two other groups: crippled children and the returning veteran. Legislative provision has made a program for the former possible. Interpretation of a fighting man's training and experience in terms of high-school credit and anticipation of and provision for his post-separation educational needs are obligations which we are glad to

assume. Trade and Industrial Education reports “trade school bulletins mailed to army and navy libraries, separation centers, and to guidance counsellors for the armed service.”

In-service Programs for Teachers. Primary Education furnishes an excellent example of the operation of this type of program, which, by common agreement, represents an answer to one of our greatest needs—that of a means for encouraging continuous improvement for the experienced teachers and continuous learning-on-the-job for the inexperienced. All group meetings, indeed all individual effort, directed toward improvement of ability in teaching may be said to constitute in-service training, but Primary Education's work program, as described hereinafter, illustrates an unusual degree of planning on a state-wide scale in this area.

Teacher Participation in Curriculum Planning. “Approximately 150 teachers in 41 parishes submitted units of instruction,” Home Economics reports. Language Arts reports similar submissions. These are only two of the areas in which active participation of teachers in curriculum planning is reported. Curricula change today with what might be disconcerting frequency if we were not aware of a constantly changing pattern of the society in which we live. Curricula must be designed to effect desirable identification of the individual with the society of which he is a member. Of all of the members of our educational personnel, teachers on the job are most admirably equipped to dictate curriculum shaping. In every area in elementary and secondary education, the on-the-job teacher increasingly makes his influence felt in educational patterns.

Simultaneous Emphases: Education in the Basic Essentials; Education in the Practical as well as the Academic. Return to emphasis upon basic essentials in instruction was inevitable, since, we can assume, we as a group are subject to the law of the pendulum. This trend is apparent throughout the reports which follow, but it is even more apparent from observation of actual teaching practices and procedures. Development of the trend can be assigned to several

factors, among them urgent recommendation by patron and employer groups. Balancing this emphasis upon fundamentals is emphasis upon education in the practical, as it is exemplified in such areas as Language Arts (Let us learn to express what we *mean*, in simple sentences); in Trade and Industrial Education (classes in the petroleum industry, in rice mill maintenance, and in sewage disposal); Social Studies (a functioning citizenry); Vocational Guidance (making a living—our most practical consideration), and Distributive Education (work experience).

Stimulation of New Viewpoints. Secondary and elementary education has been stimulated by the presentation of fresh viewpoints by such out-of-state visitors as Dr. E. M. Hunt, professor of history and head of the Department of Teaching the Social Sciences at Teachers College, Columbia University, and Dr. Dora V. Smith, professor of the teaching of English at the University of Minnesota. While we know that responsibility for program development is the responsibility of our own teaching force, we realize that we gain immeasurably in widened horizons and in broadened understanding whenever we have an opportunity to benefit from working directly with leaders in education from sections other than our own. Many areas of instruction have benefitted from visits from such leaders.

Administration and Instruction. Instruction reflects administration, and administration reflects instruction; one area shades into the other. Instruction presently is particularly affected by certain administrative developments, such as that resulting from the constitutional amendment which permits entrance into public school of a child who shall attain his sixth birthday within 4 months after the beginning of a school term or session; the conversion to the twelve-grade program; organizational surveys of school housing and transportation; and provision that 3 years constitutes the approval period of elementary and high schools. Conversion to the twelve-grade program has had most significant implications for instruction. Circular 2200 initiated conversion in its instructional aspects; the issuing of Bulletin 557, *The Seventh and Eighth Grades in the Twelve-*

Year Program of Instruction; a Tentative Guide for Teachers of Those Grades and for Administrators of the General Program, gave specific curricular development in the most critical area of conversion—that of the seventh and eighth grades.

Appropriate Materials for Instruction. Materials designed especially for use in Louisiana schools have appeared, through the functioning of the Bureau of Educational Materials, Statistics, and Research, College of Education, Louisiana State University, to which agency this Division acts in consultant capacity. The booklets, *The Mississippi River and Indians of Louisiana* have significance out of proportion to their modest appearance. The nature of this material is surely indicative of a very definite trend—that toward the provision of appealing, suitable, and regionally appropriate tools for teaching and child development. Adoption of textbooks, from which local selection is to be made on the principle of multiple choice, had a prominent part in our program of work. Again, procedures in adoption exemplified, we believe, the important principle of teacher participation in program-shaping since teacher committees were responsible for selection on the state level. Adoptions were effected in music; mechanical drawing; agriculture; home economics; health, physical, and safety education; French; Spanish; mathematics; science; social studies; and language arts.

The End of an Era. As this is written, we know that 1944-45 was our last war year. We now know that it marked the end of a period of intense war effort; we know that 1945-46 will be the beginning of effort of another kind and in an equally crucial area—that of adjustment to the new world into which we have been ushered. Education is humbly aware of the degree to which responsibility rests upon it for the welfare of mankind.

Business Education

Enrollments in commercial classes in the high schools continued to reflect the influence of the war. In spite of the

shortage of teachers and a decrease in the high-school population, slight gains in enrollments in most commercial subjects were reported. The greatest increase in enrollment over the previous session was recorded in bookkeeping, with the greatest decrease in first-year shorthand.

A slight decrease in enrollment in General Business was recorded. This is the last year in which this subject will be offered for credit in the high-school program. A course in General Business was prepared for the new eighth grade where it will be offered as an elective, starting with the 1945-46 session.

Most teachers of commercial subjects continued emphasis on wartime needs of the boys and girls. At the same time, however, stress was laid on long range values in the courses and the necessity for adequate preparation in anticipation of the changing conditions which are expected to follow the end of the war.

High-school students enrolled in commercial courses were in demand for part-time work in offices. Many students were permitted to work in offices and, in doing so, gained valuable experience under real working conditions. The demand of business for students enrolled in commercial courses greatly exceeded the number of such students who could be made available.

Teachers continued to use Bulletin 491, *Suggestive Curricular Guide in Business Education*, with good results in building their courses. Requests for the bulletin and favorable comments on its content were received from most of the states, Canada, and Hawaii.

The number of schools offering each commercial subject and the enrollment in each subject were:

Subject	Number Schools	Number Enrolled
Typewriting	211	8378
Shorthand I.....	112	2680
Shorthand II.....	12	190
Bookkeeping	177	528

Business Law.....	6	83
Business Arithmetic.....	12	449

Community Health Education Project

The experiment in health education through school and community co-operation began in the fall of 1944. The project has functioned under a directing committee from the staffs of the State Departments of Health and Education.

At the beginning of this program, individual inquiries were made as to whether administrators in 15 selected parishes would be interested in experimenting with a health program that was being considered for the state. The bases of selection of areas were (1) interest demonstrated by administrators and (2) availability of health-unit facilities.

On the basis of 15 affirmative replies from the administrators of the originally selected parishes, a letter was sent to these school officials confirming the forthcoming health program and setting forth some arrangements for its initiation. Contacts were made with superintendents, principals, faculty members, health-unit directors, nurses, representatives of the Department of Welfare, and other interested groups.

Purposes of the project tentatively set up were:

1. To experiment with a new class in the high school in health activities and experiences centered around the various health resources in the community, including nursing skills for the care of the sick in the home
2. To expand and enrich the health teaching in the schools through already existing courses of study
3. To study the health program in the school with a view of making planned instruction available to a greater number of students
4. To build within the student a broader perspective of health and to establish practices that will be so meaningful as to become a part of everyday life.

Three general plans of action have evolved along somewhat different lines of approach.

PLAN I. One of the experimental health projects has centered around the plan of initiating a new course in the high school on the junior and senior levels for one semester designed to follow the needs and interests of the group. The following units were used as guides: Personal health, family health, school and community health, home nursing and care of the sick, and local, state, and federal health resources. High-school credit toward graduation is to be allowed. The course was planned jointly in each community by school personnel, local health specialists, physicians, dentists, and nurses.

PLAN II. Several schools have inaugurated a plan of evaluation of the health status of the students with a view of making health instruction available to a larger number of students. The actual health status was surveyed by means of inventories of health interests, attitudes, information, and practices. Comparison with norms revealed areas where further health instruction and experiences were needed.

PLAN III. Integration of new health activities and community health experiences was instituted. The classes already scheduled were expanded and enriched. As an example, in home economics the six-weeks unit on home nursing was extended to one semester. Health-unit personnel and other agencies in the community assisted in discovering new techniques by which the experiences provided for the students were more meaningful.

A summary of the work reveals 2 schools in which new courses have been established; 9 schools in which an integration of new activities has begun; 2 schools in which units of instruction were extended to cover one semester in the high school; 11 parishes in which consultant service for all high schools was made available; and a number of schools in which experimentation is planned.

In addition, several one-day conferences with school faculties were held. Parish-wide immunization programs were planned and conducted jointly with the Department of Health. Meetings were held with personnel of the teacher-training institutions with a view of studying existing programs for teachers in training and to provide, where possible, greater co-ordination of health agencies in the community and to enrich and broaden the experiences of the students.

Distributive Education

The co-operative part-time program was expanded slightly. The program was discontinued temporarily in one high school because a qualified teacher could not be found. The shortage of teachers prevented other co-operative programs from starting, and turnover of teaching personnel hindered growth of the work.

Co-operative classes were added in Bolton High, Alexandria; Huey P. Long Trade School, Winnfield; and Peters High, New Orleans. High schools in which co-operative part-

time programs were in operation included: Ouachita Parish High School in Monroe; Bolton High School in Alexandria; Huey P. Long Trade School in Winnfield; Lafayette High School in Lafayette; Ponchatoula High School in Ponchatoula; Istrouma High School and Baton Rouge High School in Baton Rouge; and Berhman, Kohn, McDonogh, Nicholls, Wright, and Peters high schools, and Rabouin Vocational School for Girls in New Orleans. There were 16 classes in the 14 high schools represented and 302 boys and girls were enrolled.

Distributors clubs were started by the co-operative part-time students in six of the high schools. Similar clubs have been started in the other states of the Southern Region, and an emblem has been designed for members of such clubs. The club is an organization of vocational students enrolled in co-operative part-time distributive education classes. It has as its purpose to further the welfare of its members by providing for exploration of vocational opportunities in the field of distribution, to increase interest in the distributive occupation chosen by the individual student, to encourage high ethical standards in business, to develop leadership in the field of distribution, and to foster an appreciation of the responsibilities of business to society.

Few evening classes were provided for persons employed in the distributive occupations. The enrollment in pre-employment classes to provide for seasonal business needs was greater than the enrollment in extension training for employed personnel. No itinerant instructors were employed because no qualified instructors could be interested in the positions available.

The demand for courses for supervisory personnel in the distributive occupations could not be met due to a lack of qualified instructors and, for the same reason, requests of merchants for courses for their personnel could not be met.

Teacher training for co-ordinators of distributive education was provided through in-service training by the supervisor and through a state-wide conference. A teacher-training conference, provided jointly by Louisiana, Arkansas,

Mississippi, and Tennessee, was held for two weeks in Memphis. Four co-ordinators from Louisiana participated.

Health, Physical, and Safety Education

Increased interest and activity on the part of the official and related organizations in the area of health and physical education have been encouraging. The State Association has been reactivated. It has passed its goal in both state and national memberships. Louisiana ranked third in the nation in increase in national membership. The Society of Public Health Nurses doubled its state membership.

Another indication of professional growth was the expressed need for special assistance. Through the efforts of the State Department of Education and Louisiana State University, five nationally known leaders were brought into the state for lectures and conferences other than those connected with workshops.

Out of the conferences of the college teachers of health and physical education, there developed a program of in-service and pre-service training of teachers which has received national recognition. Workshops, clinics, and conferences for college teachers and leaders from related agencies have been planned.

The greatly increased interest among teachers and supervisors in the study of children has created a demand for assistance in physical education for the primary and elementary grades far exceeding the service available from the Department. To meet this need, limited assistance has been generously given by members of some of the college faculties.

The visits of the acting supervisor have in most instances been carefully planned. Arrangements have been made for conferences with faculties, and for demonstrations and planning periods through the assistance of mothers, former teachers, school councils, school aides, and upper grade pupils, with minimum interference with the school program. Such provision for in-service training of teachers dur-

ing the school day may not only be beneficial to teachers but may offer unusual opportunities for pupils, parents, and others.

Assistance in workshops has been one of the most satisfactory, fruitful types of supervision. The popularity of workshops is indicated by the fact that the supervisor in this area alone participated in nine last year.

Athletic competition for both boys and girls is gradually returning to its former status.

Many factors have retarded the progress of health and physical education instruction, and the return to normalcy, when compared with other fields of instruction, has been slow. However, there are some very encouraging programs under way.

The interest in safety education is increasing, but continues to be far below the need. It is encouraging that two new local safety societies have been formed with affiliated education sections.

Sound school health policy and finance call for co-ordination and prevention of duplication. It is this phase of the year's work which has shown most progress, that of co-operative planning and working of agencies contributing to health education.

Evidence of this progress may be seen in the formation of: (1) The Co-ordinating Committee of the Departments of Health and Education; (2) A leadership conference of Louisiana State University, the Department of Health, and the Department of Education; (3) The Interdepartmental Committee of the Departments of Health, Institutions, Public Welfare, and Education; (4) Parish and city councils or committees; and, (5) An area development between a teacher education college and four parish councils.

Home Economics

Reorganization of the public school system into a twelve-year program provided an opportunity for studying curriculum revision in home economics. A committee formulated

plans and procedures for securing general participation of home-economics teachers. The committee was ably assisted by Miss Beulah Coon from the U. S. Office of Education. The progress report of the committee, composed of high-school teachers, 12 consultants from college home-economics departments and the State Department of Education, reveals general curriculum activity among 60 parish chairmen, who held from two to five meetings. The purposes of parish meetings were to study situations, ways of determining needs, and to plan learning experiences in terms of needs and interests of pupils at home and school. Approximately 150 teachers in 41 parishes submitted units of instruction they prepared and used.

Significant developments and achievements have come through the high-school teachers, whose attitude, interest, and zeal have resulted in unity of group effort in studying ways and means of increasing the effectiveness of instruction in personal and family living. Area conferences gave teachers an opportunity to consider ways of evaluating offerings in home economics and to discuss and to select points of emphasis in curriculum study. Among the points discussed and listed, the following show direction of efforts:

1. Prepare a basic guide of good teaching
2. Make levels of learning more distinct
3. Give more help in the revised bulletin to guide pupil-teacher-parent planning
4. Include a year's work in home economics for boys and girls in same class
5. Include a year's work in general homemaking for girls who have had no home economics.
6. Combine all child-care units into a semester's work on child development and related problems and provide opportunities for students to observe or to work with little children
7. Devote twelfth year's work to skills based on interests and needs

8. Provide learning experience at the seventh- and eighth-grade levels that will bring satisfaction to pupils and increase the holding power of home economics in high school

A post-war planning committee for homemaking met for one day for the purpose of taking an overview of educational needs in home and family living as a part of the total school program. This committee included a parish superintendent, a parish supervisor of instruction, a high-school principal, a homemaker, Federated Women's Club and Parent Teachers Association members, high-school and college home-economics teachers, college and high-school students, and state supervisors. Discussions of status of the present program revealed that approximately 65 per cent of the girls and one per cent of the boys were receiving instruction in homemaking at the secondary level. A very small percentage of the 36,000 girls in the elementary grades were receiving such instruction. Therefore, it was concluded that instruction in home and family living should become available for girls and boys in the seventh and eighth grades. The committee recommended that:

1. Home living be the name of a course to be offered to boys and girls at the elementary level
2. Homemaking be the name of the course at the secondary level
3. Instruction be practical, functional and meet the needs of youths in elementary and secondary schools
4. A general course in personal and home living be offered to boys and girls as an elective

Increasing the effectiveness of the homemaking program in the school and community remains a constant goal of both teachers and supervisors. Assistance and guidance have been given to most of the 392 teachers employed in 352 schools (248 vocational—104 non-vocational) through 10 area conferences and 347 visits to home-economics departments. These activities and teachers' reports give evidence of achievements in major activities, such as food production

and conservation; nutrition education for children, youths and adults; home nursing; consumer education and rationing; care and repair of equipment and furnishings; renovation of clothing; care of children; studying food habits and guiding learning experience of children in the lunchroom; supervising school lunch program; co-operating with Red Cross, United Nations Clothing Collection, Parent Teachers Association, Girl Scouts and civic organizations; canning surplus foods for the lunchroom; helping with wartime nursery schools; and helping with nutrition projects, community service centers, and recreational programs.

Program development and achievements are indicated in the following facts compiled from 352 annual reports:

1. Teachers were employed for extended services for ten or more months in 168 schools where activities included home visits; food production and food preservation, home management and home improvement, recreation; renovation of clothing; use, care and repair of equipment; home nursing; special help in Red Cross rooms; and art and handicraft. The latter activity attracted much interest in the Evangeline area, where French homemakers are using local products in weaving household articles.
2. Approximately 150 home economics students in two schools in Baton Rouge and one in Shreveport gave services to wartime nursery schools.
3. BIBS (Battalions in Ideal Baby Service) were organized in Byrd High School, Shreveport, where girls in child care courses assume work responsibilities in caring for children after school hours. Parents employing BIBS sign an agreement which outlines joint responsibilities after conferring with the home-economics teacher. Parents teachers, and students are well pleased with this educational-work-service in the school-community program.
4. Food production and conservation have received unusual emphasis in most of the 248 vocational departments where 260 teachers assume responsibility for approximately 35,000 home projects in victory gardens and food conserva-

tion. Through class instruction and canning in the home-economics departments, over 175,500 cans and jars of foods were canned. Home-economics teachers have worked with groups in many of the lunchrooms where they taught and supervised canning activities when surplus foods were made available. Approximately 190,000 cans of fruits, vegetables, and meats were canned. Twenty-one teachers gave special service in community-canning centers by supervising and teaching methods of work, management, care of equipment, testing sealers, labeling, and storing foods.

5. Improvement of nutrition education was a part of every program. Data compiled from reports show that approximately 60,000 children in elementary and 21,735 children in high school and 430 adults were reached through this phase of the homemaking program. In addition to organized class instruction, 167 teachers assisted with school lunch programs. In some schools home-economics teachers and students gave instruction in nutrition or food and eating habits to pupils in grades one to four over a period of three months. Many teachers have worked with elementary teachers or had junior and senior girls lead discussions on nutrition in all elementary grades.

6. Instruction in home nursing and care of the sick has claimed the attention of 123 teachers who taught this course to 1,918 girls. Assistance of registered nurses was available in 20 centers where Red Cross certificates were given to 451 girls. In other centers home-economics teachers taught the course to girls, who received certificates from the State Department of Education. Observations and conferences with nurses, teachers, and students indicate a growing interest and a fine attitude towards this course.

7. Home projects completed by girls totaled 32,868.

8. More than 10,000 homemakers were reached through adult classes and "service-center" days.

9. More than 50,000 garments were made in class and in home projects at a cost of \$77,387. If these garments had been bought, the cost to parents would have been approximately \$230,000; hence, school girls' work experiences and

services in clothing alone saved \$152,613 in family expenditures. Approximately 5,000 garments were renovated in class activities and in home projects.

10. Home-economics girls sold \$170,946.07 in war bonds and purchased \$50,840.00 thus helping to save and invest \$221,786.07.

College representatives and supervisors have worked together in a state-wide curriculum project which is providing numerous opportunities for pre-service and in-service training experiences. Teacher trainers have presented a few of these problems to methods classes by way of provoking more thinking on needs of children when planning instructional units. In co-operation with the state supervisory program, Northwestern and Southwestern colleges, and Louisiana State University teacher trainers in homemaking help with in-service training in their respective areas.

Home Economics for Negroes. Home economics is being offered in 78 of the 110 Negro high schools. Of this number, 55 are approved as vocational departments. Approximately 5,000 high-school girls were enrolled in classes and 750 women were enrolled in 24 centers; 11,550 home projects were completed. Approximately 30 schools had gardens, and more than 1,400 girls carried on projects in food production and conservation. A large number of the teachers assumed responsibility for the school-lunch program.

Junior Homemakers. The Junior Homemakers Organization has continued to serve students in home economics. The membership totaled 11,030 in 236 active clubs. Continuing to adapt the program to activities that were essential to the war effort and stimulating a functioning program for members were the main goals for the year.

Louisiana took an active part in helping to perfect the new type national organization. Three of the state officers, a member-at-large, one club adviser, and two supervisors attended a Four-State Home-Economics Club Conference held in Russelville, Arkansas, to assist in the reorganization. It was at this meeting that the State President of Junior

Homemakers was chosen as a potential candidate for the regional vice-president representing the area composed of 12 Southern States and Puerto Rico. The state president was one of the 12 representatives in the nation to be invited to Chicago, Illinois, to complete plans for the new type national organization. It was at this meeting that she was elected president for the Southern Region.

School service projects have received major attention this year and accomplishments have been made in: (1) keeping the girls' basement clean and sanitary and making it attractive by adding curtains to windows, dressing table, and mirror; (2) helping children to respect property; (3) making health posters for the elementary grades; (4) planting and caring for rose and bulb gardens on the school campus; (5) planting shrubbery on cottage grounds; (6) renovating the teachers' lounge; (7) purchasing a flag for school campus; (8) buying dishes for lunchroom; (9) helping with the canning for the lunchroom; (10) sponsoring a *Better Manners Campaign* in the lunchroom; (11) giving illustrated talks on nutrition throughout elementary grades and keeping bulletin board in lunchroom attractively arranged to emphasize good nutrition; (12) operating an inexpensive nutritional "snack bar" after school hours when the gymnasium is used as a recreational center; (13) purchasing and making appropriate curtains for the library and the music room; (14) sponsoring a *Mending Service Center* where students and teachers may use sewing materials, mirror, and lavatory; (15) promoting courtesy, sportsmanship, friendliness, and politeness among student body on campus; (16) keeping bulletin board attractively arranged in study hall with materials that are of interest to the student body; (17) keeping club rooms open during noon hour for any student in school; (18) purchasing an attractive picture for the hallway in the school building.

Club advisers and members have maintained a high standard of efficiency in the year's work, co-operating with the war effort in every conceivable way. The scope of war achievements include: (1) buying a \$1,000.00 war bond and four \$100.00 war bonds in the state-wide war bond projects;

(2) purchasing war bonds by 72 clubs totaling \$2,035.75 and by individual club members totaling \$95,094.90; (3) collecting clothing for the United Nations Clothing Drive, and assisting with the mending of clothing; (4) contributing money and making garments for the Red Cross; (5) collecting waste paper and waste fat; (6) producing and conserving food in the home; (7) planting a victory garden on cottage grounds and using vegetables in food preparation work; (8) making toys for wartime nursery schools and assisting with the care of children in these schools; (9) working with the lunch program to improve the food and eating habits of children; (10) contributing \$230.68 to the International Fellowship Fund; (11) making \$15,648.68 to finance club projects.

For four consecutive years, a state-wide war bond project has been sponsored, bringing the maturity value of bonds to \$4,800.00. Plans are underway for drafting rules and regulations to guide the organization in using this money as a Loan Scholarship Fund for worthy junior homemakers to enter college and study home economics.

Language Arts

Nation-wide emphasis upon oral and written communication in wartime gave renewed impetus to the evaluating and planning of English programs everywhere. In Louisiana, teachers were urged to discuss weaknesses in the program; to evaluate professional articles disseminated from the State Department of Education, the U. S. Office of Education, and the National Council of Teachers of English; and to plan work with a view to incorporating the ideas which best suit the particular needs of their pupils. Since the incorporation of many suggestions for improvement of the teaching of language and reading during wartime proved both functional and stimulating, it is believed that the benefit derived will continue.

In keeping with the policy of the State Department of Education, the Section of Language Arts seeks constructive criticism of all programs planned. As a consequence, three questionnaires were sent to school personnel. The first sought information concerning experiments with reading. Sent to

all principals in the state, it asked for descriptions of reading programs: their organization, the materials and methods used, the successful features, and any weaknesses revealed. Suggestions for additional ways in which the State Department might be of help were requested. The second circular contained an enumeration of pertinent problems in the field of English and a plan for organizing the course in such a way as to prove more functional and stimulating. Teachers were asked to suggest solutions for the problems mentioned and to experiment with the units suggested, giving their reactions to them. This circular was sent to parish superintendents, supervisors, principals, and English teachers. The third questionnaire, planned for principals and teachers of the elementary schools, sought suggestions for further improvement of elementary reading. Teachers were asked to mention devices for arousing more interest in the appreciation of good literature. A request was made that they list special selections which they consider the literary heritage of all children. Suggestions received from a compilation of the responses to all these circulars will be incorporated in the year's work.

The work of the English clubs of the state, though confined to a few groups, has been outstanding. The Sixth District English Club had for its subject "The Communication Arts During Wartime." The Ascension Parish English Club, after formulating its own program, had meetings to implement and evaluate what had been done. The president and the chairman of the program committee of the Caddo English Club based their programs as much as possible upon suggestions received from their visit to the 1944 Conference of the National Council of Teachers of English. The Bogalusa Club continued its study of reading.

In a joint effort to improve the teaching of language arts in the state, the East Baton Rouge Chapter of the Association of Childhood Education, the Classroom Teachers' Association of East Baton Rouge Parish, and the Department of Education of Louisiana State University co-operated with the Sixth District English Club to bring to Baton Rouge Dr. Dora V. Smith, of the University of Minnesota, for a series

of lectures. The state supervisor of English assisted in making plans for these lectures. Dr. Smith's three addresses, giving practical advice for improving the English program, were made to educators from all over the state and should prove far-reaching in their effects.

The supervisor of English feels that the most effective supervision done was that in which she was invited to specific parishes to work on definite problems. Examples of such supervision consisted of (1) visiting in Calcasieu Parish to meet all teachers of certain schools for the purpose of planning a co-operative program for improving reading; (2) visiting Jackson Parish in October for the purpose of meeting the principals and the entire faculties to plan a reading program for the year, and making a second or follow-up visit in March to evaluate progress; (3) assisting the parish supervisor of St. Tammany Parish, the state supervisor of primary education, and the faculty of the Lee Road Elementary School in conducting a week's workshop for observation and evaluation by the teachers of that parish; and (4) co-operating with two other members of the State Department in assisting the supervisors of East Baton Rouge Parish with definite supervisory problems.

It is the belief of the Department that the adoption of new textbooks should prove a stimulating factor in the development of good programs. In the field of language arts, new books in both language and reading were adopted for both elementary and high-school levels.

Indications of improvement in the program of language arts throughout the state consist of:

1. Manifestations on the part of teachers and administrators of dissatisfaction with present programs and, as a consequence, an increase in the number of requests for help

2. Increased teacher participation in professional projects

Plans for the future consist of:

1. Working even more closely with teacher-training schools on a co-operative plan to be of assistance to more teachers

2. Organizing groups for further study of problems in language arts

3. Assisting wherever possible with projects requested by the parish superintendents, supervisors, and teachers.

Music Education

Wartime exigencies continued to affect the maintenance of adequate personnel necessary for the continuance of music education. The acute teacher shortage resulted in an increase in the issuance of temporary certificates. The absence of a sufficient number of qualified music teachers emphasized the need for in-service training of those remaining and led to a broad program of visitation. On these visits it was observed that one of the paramount problems faced by music teachers, especially those in the smaller schools, was that of, during the school day, allotting an amount of time sufficient to meet the needs of those children desiring to engage in the activities of music education.

The Music Section of the State Department of Education devoted a considerable amount of time to the preparation and initiation of the music program in the new eighth grade recently added to the Louisiana public school system. The tentative plan was included in Bulletin No. 557 issued by the Department.

The Music Section co-operated with the Louisiana Teachers Association by providing music for the House of Delegates at its annual meeting. Likewise, it assisted the Louisiana Music Education Association in that group's annual meeting.

Out-of-state music activities engaged in by the Music Section included participation in the annual programs of the Southern Conference for Music Education and Region VII of the National School Band, Orchestra, and Vocal Associations. It also had additional opportunity to be of service during the various workshops conducted throughout the state.

It is gratifying to report that the outlook for music education in the public schools appears to be more favorable

than at any time since the outbreak of the war. School administrators and patrons continue to express a desire to resume their programs of music-education at the earliest possible date. Such an attitude fosters the belief that public school music will develop into a broader and more intensified program.

Negro Education

The improvement of education for Negroes in Louisiana involves the following major problems and objectives: (1) securing more teachers, better teachers, and better salaries; (2) providing improved educational facilities accessible to all the children; (3) establishing a full school session; (4) adapting the educational program to community needs; (5) providing more administrative and supervisory help for Negro schools; (6) providing graduate and professional education; (7) improving school attendance; and, (8) establishing a co-operative plan for financing improvement.

More Teachers Needed. Louisiana's 1945 school census reported 211,922 Negro educables. Final tabulations will most likely increase this figure by several thousand. Public schools for Negroes enrolled 163,553 in 1944-45. The most reliable information to date indicates that 18,969 children were enrolled in private schools. There were at least 29,400 Negro educables out of school. The actual number is probably greater than this because, the final tabulation of state educables will likely show an increase over present figures.

The public schools employed 4309 Negro teachers to teach the 163,553 Negro children enrolled in 1944-45. The average pupil-teacher ratio for the state was 37.9. Many elementary and high-school classes enrolled more than 50 pupils. If the 29,400 out-of-school Negro educables were enrolled in the public schools, at least 776 additional Negro teachers would be needed to maintain the present state-wide pupil-teacher ratio of 37.9. The writer estimates the state's need for additional Negro teachers at 1,200.

Teachers' Salaries. The state average of Negro public school teachers' salaries was \$866.55 in 1944-45. For the pre-

vious session the average was \$810.98. This indicates an increase of \$55.57, or 6.85 per cent. The state allots \$775.00 per Negro teacher as its part in the support of the minimum educational program. Many parishes have not attained an average of \$775.00 per Negro teacher. However, the salaries of Negro teachers have increased materially since 1939-40.

Statistics given elsewhere in this report indicate that more than 775 Negro teachers will be needed in the public schools of the state, if and when all Negro educables are enrolled. It is also likely that good public schools will attract Negro children now attending private schools. There is a constantly increasing demand on the part of Negro teachers for better salaries, and state and local officials are recognizing that a good teacher is essential to a good school, and that good teachers must be paid salaries commensurate with their services. Additional public school funds are needed for more Negro teachers and better salaries.

Teacher Shortage. Many Negro teachers have been drawn into military service. Others have left the schools for more remunerative positions. A factor contributing to the latter has been that the rapidly increasing cost of living has made it impossible for school boards to compete with wartime salaries and wages in other fields of employment. It seems that ex-service men and women, and those who have sought better salaries elsewhere, are returning very slowly to the teaching profession. The Negro schools will continue to suffer for lack of competent teachers unless public school salaries can be made more attractive.

In 1944-45 about nine per cent of our Negro public school teachers taught with emergency certificates. Many of these had little if any more than high-school education. In some cases, teachers with low-grade certificates who had discontinued teaching were granted emergency certificates and were employed in the schools.

Enrollments in classes for teacher education have not yet become normal, and the indications are that they will increase very slowly over several years. General economic conditions and low public-school salaries contribute to this

condition. However, as salaries improve, we hope to interest good prospective teachers to prepare for teaching.

Many parishes have provided in-service education for Negro teachers. Negro colleges and the State Department of Education have co-operated with local school officials to improve the teachers. Through parish workshops, group conferences with teachers, and planned school visitation, school problems have been studied and plans developed for improved teaching service. Teacher education has been carried to the teachers. In addition to the important fact that the teacher and her school were helped in a most practical way, to a limited extent, Negro colleges have given college credit for such training.

School Facilities. New classrooms will be needed for the additional 900 or more Negro teachers. Moreover, many classes are taught in buildings not owned by school boards. Too many publicly-owned buildings fail to meet even minimum building standards. More and better general school furniture and specialized equipment must be provided if we are to attain acceptable teaching and learning standards. More and better educational facilities for Negroes constitute one of our most serious educational and civic problems. Teachers and children cannot live, teach, and learn in school-rooms that are overcrowded, uncomfortable, unhealthful, and that are three or more miles from the child's home.

Consolidation and Transportation. The elementary school of five or more grades, especially where the pupil-teacher ratio is high, provides inadequately for teaching and learning. We need larger elementary schools where fewer grades and pupils per teacher can be made possible. Too many Negro children are out of school, or attend schools that fail to meet their educational needs, because a school of suitable grade is not accessible. Our Negro schools need to be recognized so as to provide a school, or transportation to a school, of suitable grade for every Negro child. Progress is being made in this direction. Parish school boards and the State Department of Education are studying the needs in these respects and developing building, consolidation, and trans-

portation plans. Thus far these studies have been made of individual parishes, but there is a gradual tendency toward a state-wide study of need and of state and parish plans for improvement. Several parishes and cities already have plans for buildings, consolidations, and transportation. In these and other parishes Negro schools are included in the total plans for educational improvement.

School Term. In 1944-45, Louisiana had 1,674 public schools for Negroes, employing 4309 Negro teachers, and registering 163,553 Negro children.

Four per cent of the Negro public-school children were enrolled in six-months schools; 35 per cent in seven-months schools; 18 per cent in eight-month schools; and 43 per cent in nine-months schools. In all public schools 61 per cent of the Negro children were provided school terms of at least 8 months. The following brief summary shows a tabulation of parish and city school systems in the state on the basis of length of school session and types of schools (elementary and secondary):

Only elementary schools, all with six-months session	1 parish
Only elementary schools, all with seven-months session	2 parishes
Only elementary schools, all with eight-months session	2 parishes
Only elementary schools, all with nine-months session	6 parishes
Elementary with six-months session and secondary with eight-months session	5 parishes
Elementary with seven-months session and secondary with eight-months session	21 parishes
Elementary with seven-months session and secondary with nine-months session	9 parishes
Elementary with eight-months session and secondary with eight-months session	2 parishes
Elementary with eight-months session and secondary with nine-months session	6 parishes
Elementary with nine-months session and secondary with nine-months session	10 parishes
Elementary with nine-months session and secondary with nine-months session	3 cities
Total	67

Annual reports reveal that 130, or 8% of all Negro public schools in 1944-45, were six-months schools; that 1,056, or 63%, were seven-months schools; that 213, or 13%, were

eight-months schools; and that 275, or 16%, were nine months schools. The 1,186 six- and seven-months schools constituting 71% of the total number of public schools, were mainly small rural schools, all elementary. Reports show that 28 parishes operated their Negro high schools for 8 months.

From the teachers' viewpoint, 181, or 4%, of all Negro public-school teachers, were employed to teach for 6 months; 1,542, or 37%, for 7 months; 190, or 19%, for 8 months; and 1,672, or 40%, for 9 months. Many teachers received monthly checks for one more month than the term for which the school was operated.

While comparative figures showing recent trends are not available, it is evident that there is a definite state-wide trend toward longer school sessions for Negroes.

The Educational Program. While we are concerning ourselves with longer school sessions, improved educational facilities, consolidation and transportation, salaries, and more and better trained teachers, two very important things must be kept in mind. The first of these is the educational program itself. Education must be adapted to the abilities and needs of Negro boys and girls and must contribute to the improvement of community life. Health, intellectual, social (moral and spiritual), and emotional development of the child must constitute the basis for an integrated school program. The Negro school cannot justify its existence unless it contributes the soundest basis of an educational program for children and adults. The school must become the initiating and co-ordinating agency for effective utilization of all state and local educational agencies. It is essential that teacher education, pre-service and in-service, be influenced by the need for this type of school-community program.

The second important thing is that Negro teachers in the state must accept the responsibility for the best type of service which they can render under the conditions that prevail. Probably the most effective factor in bringing about administrative improvements is the situation where a

teacher and her principal have done so well with what they have that the need for improved conditions becomes obvious. Too frequently in the past we have become so much concerned with the improvement of administrative conditions that we have completely overlooked what happens and what should happen to the pupils and the community through the co-operative efforts of the teacher, the school, and other educational agencies.

Supervision of Negro Schools. In 1944-45, 33 parish school boards employed Negro supervisors, who are rendering excellent service. White supervisors assist Negro supervisors with their programs of supervision in most parishes. In some other parishes the white supervisors give very effective supervision to Negro schools.

Our Negro schools generally need more administrative and supervisory attention and assistance. Short school terms, limited school facilities, and poorly trained teachers contribute to the need for the best of school supervision. It is in the rural areas where the handicaps mentioned above are the most serious. Rural teachers and children need both encouragement and assistance from supervisors and administrators. Periodic visits by the local superintendent encourage rural teachers and children and afford an opportunity for studying the needs of the schools.

Training Negro Leaders. We need more and better facilities for training Negro teachers, principals, and supervisors on both the undergraduate and the graduate levels. Opportunities for training for specialized types of educational services are very limited. The two state teacher-training institutions are rendering excellent service, but they do not have facilities and staff sufficient to train all the Negro teachers needed in Louisiana. Thus far Louisiana has made no provision for graduate or specialized training for Negroes. The state needs more well-trained workers in the fields of health, agriculture, homemaking, school administration, and school supervision. While the state may not be justified in establishing graduate and professional schools for Negroes, it might consider the desirability and the possibility of con-

tributing to the financial support of regional centers where graduate and professional education can be offered.

The Negroes of Louisiana are responding to the Compulsory School Attendance Law. Obviously more teachers and more classrooms, accessible to Negro children, will be necessary. However, our educational program and planning, state and local, include schools for all and school attendance by all of the state's children. Already many classrooms are packed to overflowing with Negro children.

Financing Negro Schools. Needs and proposed improvements mentioned in this report will require additional public school funds. State and parish current school funds will likely have to assume the responsibility for better teachers' salaries, longer school terms, and transportation. Federal funds for current operation of schools, Negro and white, are badly needed in Louisiana. While many parishes are able partially to finance the cost of school facilities, state and federal funds are needed for this purpose. Most parishes have bonded indebtedness now for white school facilities and are, therefore, unable to finance the cost of public school facilities for Negroes. A state-wide study of the educational needs, particularly for Negroes, should constitute the basis of a program, local, state, and federal, for financing improvement of all schools.

Primary Education

In primary education, many new problems arose, such as (1) the entrance of younger children into school, (2) the increasingly large number of temporary-certificate teachers in the primary grades, and (3) the constant changes that require shifting of perspectives, new understandings, and critical evaluations on the part of the teachers. Therefore, the basis of the work, as suggested by the Primary Section, was a *study program* for the primary teachers and the administrators who work with them. Circular 2264, "Problems for Study in the Primary School," was distributed to all primary teachers and school administrators. During supervisory visits in 26 parishes, it was observed that many individual schools were conducting study programs based on

the problems suggested in the circular or on other problems pertinent to their particular school.

The problems for study as suggested by the Primary Section were:

1. Health and Physical Education for All Pupils:

It was emphasized that, during the same period of time, as many growing American children had been maimed or unfitted for full living as had American soldiers been killed and injured in World War II. Neglect in some form is responsible for most of this high toll. Topics for study included (1) Ways of Co-operating with Community Health Programs, (2) Function of the Lunch Room in the Health Program, (3) The Instructional Period of the Physical Education Program, and (4) Prevention of Accidents.

2. Pupil Progress:

It was brought out that the problems of evaluating growth, recording progress, grouping, grading, reporting to parents, and promoting children carry serious responsibilities. All of these problems were studied.

3. Curriculum Problems and Recommendations:

To meet the needs of individuals and localities and to present a well-balanced program, curriculum problems must have constant study. Topics studied include problems in (1) language arts, (2) arithmetic, (3) social studies, (4) science, and (5) creative arts.

Other means for promoting in-service training of teachers included the following:

Two new branches of the Association for Childhood Education were organized—the East Baton Rouge Parish Branch and the Ascension Parish Branch. The purposes and activities of this organization are of much value in promoting the growth of teachers of young children.

Teachers' workshops consumed ten weeks of conscientious effort of the supervisor during the past fiscal year. At these workshops training and leadership were offered to primary teachers in the following parishes: St. Tammany, 1 week; Union, 1 week; Morehouse, 1 week; Ascension, 3 weeks; and East Baton Rouge, 3 weeks. One week was spent at Northwestern State College working with supervisors and principals of the Eighth Congressional District.

In October a three-day conference was held with the directors of art education of Southwestern Louisiana Institute, Northwestern State College, Louisiana Polytechnic Institute, and Louisiana State University. At this time plans were completed for the director of art education in each college to formulate and develop a well-integrated art program in several nearby parishes. This work was of much value in determining (1) some good ways of developing an art program, (2) the approximate extra cost of

such a program, and (3) the amount of training primary teachers should have in order to carry on a successful art program. The primary supervisor closely observed the work in the parishes selected and was gratified with the excellent results.

To further extend the aid and guidance of the Primary Section in solving the problems of primary education in a democratic and co-operative manner, a State Primary Steering Committee was named, with the function of formulating long-range plans for promoting the cause of primary education in the state. This committee consists of a parish superintendent, two parish supervisors, a principal, a classroom teacher, and two supervising teachers from two of the teachers colleges. Meetings have been held and first steps have been taken in developing the plans.

The primary supervisor devoted three weeks to visiting eight parishes in the interest to the United War Fund Drive. The supervisor interpreted these visits as carrying to the teachers not only the matter of collecting funds for war needs, but also the knowledge and understanding of the many ways such a drive might be used educationally to inculcate desirable attitudes and habits.

Special help and supervision were given throughout the year to the programs of Extended School Services in New Orleans, Baton Rouge, Shreveport, and Bossier City. All the centers have shown an increase in enrollment, and the work of each is of definite value to the child and the community.

The New Orleans Council of Social Agencies and several parish superintendents called attention to the rapidly increasing number of private nursery schools and kindergartens that were springing up in industrial centers of Louisiana. At a meeting in New Orleans, the dangers to the child in permitting the development of these schools without any assurance of their meeting desirable standards were discussed. A state committee was appointed, and a set of proposed minimum standards for approval or accrediting of nursery schools and kindergartens by this department was drawn up, submitted to the State Board of Education, and approved by them as submitted.

Thus, efforts to provide better opportunities for young children were made through leading teachers in studies of their problems (1) in workshops, (2) in professional organizations, (3) in professional faculty meetings, (4) in supervisory visits, (5) in co-operation with the state teachers colleges, and (6) in developing standards for nursery schools and kindergartens.

School Libraries

In the area of school library services, one recent development may have a lasting significance and is therefore selected for emphasis in the present account. This development is that represented by the appointment of committees advisory to the office of the supervisor of school libraries. Nine committees were formed; various groups in education were represented in committee membership—superintendents, supervisors, principals, teachers, school librarians, and groups in services related to education. In forming the committees, certain questions were posed to initiate thinking; members themselves decided upon emphases desirable in actual work. Committees, initiatory questions, and proposed emphases are given here. The proposed emphases are in order of committee-member preference.

Committee No. 1: *Library Service in Elementary School and in Combination Schools*. Question posed: Since organized library service in this area is comparatively undeveloped, can precautions be taken now to insure sound development? Activities or objectives: Act to secure the employment of librarians in elementary schools; recommend minima for attempting centralization of elementary school libraries; recommend daily activities suitable for a library program for elementary schools; recommend those elements desirable in a program of training for librarianship in elementary schools; examine the possibilities in centralization of processing of library materials for elementary schools within a parish or city system.

Committee No. 2: *Library Materials in Trade Schools*. Questions posed: Is organization of library materials in trade schools desirable? If so, what organization should be

followed? What are the best sources for the listing of materials useful in trade schools? Activities or objectives: Prepare a list of books for libraries of trade and vocational schools, recommend a plan for the administration of library materials in trade schools; act to provide for more flexibility in the selection of books to be requisitioned for trade schools under state purchase; recommend a plan for setting up an office for centralized processing of all library materials intended for use in trade schools.

Committee No. 3: *Library Service in Negro Schools*. Questions posed: Do central libraries serving small elementary schools function properly? How should materials in these libraries be organized? Activities or objectives: Act to improve book collections in suitability and in number of books per pupil; act to stimulate teacher familiarity with and use of materials; act to secure budget provision for full-time librarians in large elementary schools; recommend essential factors in effective library service to small rural elementary schools; compile a list of leisure reading materials for early adolescence; set up display and examination collections of books for circulation to schools or to centers requesting this service; act to recommend for library provision in post-war building or remodeling.

Committee No. 4: *Library Materials*. Questions posed: Are lists of recommended titles of value? If so, what lists are immediately needed? Would a chart treatment of audio-visual instruction aids be helpful? Are regional publishers' exhibits desirable? If so, what plans can be made for them? Activities or objectives: Compile a list of books in science (flowers, birds, insects, astronomy) simple enough for use in the grades; act to make these books available under state purchase; encourage regional conferences on the use of audio-visual materials; compile a list of books for the first grade which are really suitable in difficulty; act to make these books available under state purchase; encourage publishers' exhibits; make and distribute a chart of audio-visual aids, presenting essential of each type.

Committee No. 5: *Materials Bureaus*. Questions posed: Is a materials bureau handbook called for? If so, what

should it cover? Activities or objectives: Prepare a statement on materials bureaus, their purpose, their program of service, the basis of materials selection, methods of materials circulation, plans for materials organization, and promotion of materials use; promote an annual meeting of directors of materials bureaus and of others interested in their development; prepare a list of recommended free and inexpensive materials.

Committee No. 6: *Co-operation with Public Libraries, Both City and Parish*. Questions posed: How can we utilize the parallel services of the school library and the public library to effect a reduction of duplication of service and at the same time effect a maximum use of public money with maximum service to young people? Activities or objectives: Prepare a statement on the services that schools may expect of public libraries when no contract for service has been made; prepare examples of contracts which might be instrumental in effecting a satisfactory service in those situations in which service under contract is desired.

Committee No. 7: *Planning School Library Quarters*. Questions posed: In planning for post-war building, what shall we recommend for school libraries? Are rooms for the use of audio-visual aids desirably placed when adjacent to the library? What equipment is satisfactory for the storage of recordings, electrical transcriptions, filmstrips, slides, and maps? What library equipment can be made locally? Would there be demand for blueprints of such equipment, if they were available? Activities or objectives: Prepare building plans for (1) high-school libraries, (2) elementary-school libraries, and (3) combination high-school and elementary-school libraries; prepare recommendations for equipment satisfactory for the storage and handling of audio-visual aids.

Committee No. 8: *Centralization of Processing*. Questions posed: Is centralization of processing desirable? Is it practicable? If so, on what level and for what type of library services is it suitable? Activities or objectives: Study and report on some situations in which centralization is employed; recognize the factors in a program of centralization

of processing; e.g., time and personnel required; encourage experimentation in centralization for one parish for one year, with conditions suggested by committee members observed; formulate a description of circumstances under which centralization of processing may be desirable.

Committee No. 9: *Education for School Librarianship and Teacher Education for Library Utilization*. Question posed: Is Louisiana's program in preparation for school librarianship adequate? Activities or objectives: Evaluate provisions in Bulletin 497, *State Certification of Teachers, Superintendents, Supervisors, Principals, and Librarians*, as they are pertinent to the interests of this committee; study the curricula of major library schools to determine the advisability of providing for more specialized training for school librarianship than is now provided; send out questionnaires to school librarians of Louisiana to determine their views on the effectiveness of instruction for librarianship; plan for an in-service program for teachers in instructional and developmental materials.

Although no conclusion can be reported for the work of any committee, this area of activity is selected as the subject of this report since it is believed that its presentation will serve two purposes. First, it will furnish a summary of trends and activities in the school library field; and, second, it will call attention to an important consideration in any educational service; i.e., that the service should be designed at the dictation of the needs of those served.

School Lunches

Judging from the annual lunchroom reports, more and more the school-lunch program is being accepted as a valuable project in health and nutrition which will safeguard the well-being of all Louisiana boys and girls and give "equal opportunity for each child in developing better health and eating habits regardless of circumstances." The values of the school lunch have been reported largely in terms of its benefits to the child, yet many administrators have seen broader values in terms of benefits to parents, homes, and

communities. The statements quoted below from the reports indicate the belief of those working in the program. Some of the findings, based on observations of administrators over a period of from one to several years, show boys and girls to be "healthier and happier with better food and eating habits"; "doing better school work"; "missing fewer days at school due to illness"; "gaining steadily in height and weight"; "more alert" and with "afternoon interest in classroom work higher"; and "a general reduction of malnutrition cases as shown by a recent examination of all pupils."

Other values reported include: "parent education"; "improvement in foods served at home"; "interest of parents in school"; "better pupil-teacher relationship," and "school-home relationship"; "less illness in community"; and the "public more interested in nutrition and the school-lunch program."

Benefits to the child, other than from the standpoint of nutrition, are: "improvement in pupil attitude, discipline, school spirit"; "development of responsibility and co-operation"; "poise" and "social development brought about through the lunch hour at school." From reports, there were "fewer traffic accidents" because children remained at school for lunch and did not have to travel on the highways or streets.

The school-community lunch program is gradually becoming a community project in "deed and not in word only." The scope of the program can be seen to some extent by the amount of money involved. WFA reimbursed 1,253 schools in 52 parishes and one city system. The amount used in these schools was \$1,411,308.00. Since a requisite of the federal program is the matching dollar for dollar with state or local funds, this means that the total amount expended in this program was at least \$2,822,616.00. Moreover, figures compiled from the reports of 1,237 schools out of 2,847 schools in the state show local contributions, without state allocations, more than matching the federal reimbursement. The state allocation of \$238,637.34 to the parishes ranged from \$668.99 to \$46,430.69. In addition to the above, there

are several hundred school-lunch programs in the state that do not participate in the federal program. These programs are operated on the cafeteria or concessionaire plan under the guidance of the school. Local funds secured through purchase of lunches by children materially increase the amount of money involved on a community basis and increase the scope of the school-lunch program. This proves that a well-planned and well-managed lunch program can be almost self-sustaining.

Not only have the communities contributed funds, but much food has been produced and conserved for use in the lunchroom. For example, there were conserved for school lunch pantries 189,186 cans and 28,543 pounds of fruits, vegetables, and meats. One community reported "all possible locally produced foods are utilized. Purchases of such foods from local families turned back into the community more than \$300.00 each month. Over 1,000 pounds of pork were fattened on school garbage and slaughtered by agriculture students."

Many schools have greatly improved the lunchroom equipment. Through the interest of Dr. Andrew Triche, Supervisor of Trade and Industrial Education, and his co-worker, Mr. Ralph LeBlanc of New Orleans, it was possible to locate war surplus equipment in the Higgins Aircraft Corporation. The supervisors found the equipment suitable for lunchrooms and reached an agreement with the plant manager of Higgins which enabled the State Department of Education to arrange for it to be purchased by parish superintendents. Twenty-six parishes purchased equipment at a total cost of \$9,249.09. Since equipment has been a critical need of many schools, this transaction was a valuable aid to many lunch programs. This service will be continued as war surplus equipment is released and located.

In order to strengthen the program on a parish-wide basis an in-service training program for lunchroom workers was initiated this year. It was felt that workshops would reach a greater number of workers in a minimum amount of time with a training program that would best meet the needs of

a group of people that differ greatly in degrees of education, training, and experience. Eight parish workshops were conducted for lunchroom workers. These one-day workshops were held at a central school in the parish so the workers could actually prepare and serve food for the 200 to 400 children in the school. At least one worker from each lunchroom, and sometimes all workers within the parish, attended these meetings. "Over-the-shoulder" teaching was done while the women were working, and a general discussion hour was held after lunch, when specific problems were presented. By providing opportunities for learning activities, it has been possible to create greater interest in the school-lunch program and develop pride in and a sense of responsibility for the success of the program. Improved skills and techniques in planning, preparing, and serving appetizing meals and a more widespread recognition of the importance of cleanliness and sanitation have resulted from this in-service training.

Assistance in planning, equipping, and arranging convenient and attractive lunchrooms was given at Calvin, Sikes, and Dodson schools in Winn Parish; Chenal, New Roads, and Livonia in Pointe Coupee Parish; Georgia Tucker in the City of Monroe; Dry Prong in Grant; Bourg and Houma Elementary in Terrebonne; Lecompte and Boyce in Rapides; Trout-Good Pine in LaSalle; Metairie in Jefferson; Ponchatoula in Tangipahoa; DeRidder in Beauregard; Highland and Zachary in East Baton Rouge; and schools of Iberville Parish. After plans were developed for Calvin, Sikes, Chenal, Bourg, Houma Elementary, Boyce, and Highland, they operated very successful programs this year for the first time. Rapides, Terrebonne, and East Baton Rouge were assisted in undertaking the operation of the lunch program with federal aid for the first time this year, while plans were developed for LaSalle, Jefferson Davis, East Feliciana, and several schools in Calcasieu to begin a program in 1945-46.

The school-lunch program has been given publicity through news articles and radio broadcasts by the two school-lunch supervisors. Articles were prepared as follows:

Name of Publication	Agency by Which Published	Title of Article
Louisiana PTA Bulletin, January issue	Parent-Teacher Association	Our School-Home Community Lunch Program
Louisiana Education in Wartime, March issue	State Department of Education	Denham Springs Lunchroom is Co-operative Enterprise
Louisiana Welfare April issue	State Department of Welfare	Louisiana School-Home Community Lunch Program
"Lifting the Lid" May issue	State Nutrition Committee	School Lunch Workshops
Journal of Home Economics, June issue	American Home Economics Association	Louisiana's School-Lunch Workshops

Through visits to 216 schools in 62 parishes and 3 city systems, the supervisors of the school-lunch program were able to work with administrators, teachers, and lunchroom staff in further developing the program in the school. In addition, they also worked with representatives of interested agencies in co-ordinating activities contributing to the physical, social, and mental well-being of boys and girls. The supervisors served as consultants at college workshops for lunchroom supervisors; prepared instructional guides for use in developing the program, and prepared and compiled menus and recipes for printing a bulletin to be made available to all school lunchroom managers.

Teachers have co-operated generously in many schools. Home economics teachers, both white and Negro, have assumed responsibilities ranging from simple directive activities to full-time supervision. Where the latter practice is followed, the teacher's schedule includes two to three hours per day for lunchroom management. As the program expands, it is desirable to have a well-qualified person employed on a full-time basis placed in charge of the program. The practice of depending entirely on the teacher and pupils for preparing and serving the hot lunch should be discouraged since this means, in most instances, neglected classroom activities. No lunch program should be undertaken without the help of at least one or more paid workers, or the services of regular volunteer workers.

In many instances superintendents, principals, teachers, students, and parents have had a part in planning, conducting, and evaluating the school-lunch program. The extent

to which it has been accepted as a part of a vitalized school program has determined, in a large measure, its success. Many schools report successful correlation of lunchroom activities with subject-matter areas of the curriculum. This is a sound educational practice and has much value in carrying forward the development of the school-lunch program as a part of total education. The statements below are quoted from annual lunch-room reports and show various educational practices in correlating learning experiences in terms of real life situations:

1. "Bookkeeping and commerce department keep books and handle finances."
2. "Arithmetic classes find problems based on lunchroom activities. Problems in percentage use figures from lunchroom as the number eating in lunchroom, number enrolled in school, the increase from month to month, and cost per pupil."
3. "English classes write newspaper articles, themes on food needs. Stories based on food are read and told to lower grades."
4. "Health and nutrition studies use the lunchroom as a practice laboratory."
5. "Sanitation is given emphasis through handwashing, proper handling of food and dishwashing."
6. "Home economics students give demonstration to other classes on table manners and also 'food talks' on lunchroom meals."
7. "Testing recipes for lunchroom use was done by one senior home economics group."
8. "Classes study foods needed daily and help plan meals for lunchroom."
9. "Civics is vitalized with good citizenship activities based on lunchroom situations."
10. "Physical education and health program ties in with lunchroom program on better food and eating habits."

11. "Meals which are to be served in lunchroom during the week are taken home to parents who plan their meals to supplement these so that adequate meals are served to the boys and girls in the fifth-grade group."
12. "Science groups have made a study of sanitary conditions of lunchroom; determined ways to exterminate pests, and methods of disinfection."
13. "Social science groups studied food supplies and waste."
14. "Agriculture classes planned, planted, and cultivated gardens for lunchroom use."

Social Studies

The supervisor of social studies spent the first two weeks of the 1944-45 school session in the interest of the National War Fund Drive. Thirty-nine conferences were held in eight parishes. Thirty-four parishes were visited for the purpose of helping to improve classroom instruction in social studies. A number of individual and group conferences were held in each parish. Methods and techniques of teaching in the various subjects of social studies were discussed. Much emphasis has been given to the teaching of current history. Our main objective has been to provide experiences for pupils so that they may acquire the knowledge, habits, skills, attitude, and general pattern of conduct that are necessary for an individual to live in a democracy. Several weeks were spent assisting in organizational studies of five parishes. Parish workshops and institutes occupied most of the summer. Much interest was manifested by the teachers at the East Baton Rouge Parish Workshop which was held on the Louisiana State University campus. The social studies teachers organized a local unit of the National Council for the Social Studies. This organization should provide opportunities for discussion groups to initiate methods of meeting the needs of children. Some revision has been made in the social studies program for grades seven and eight in the twelve-year program which appears in Bulletin 557. Most of the schools have added a considerable number of books and maps to their libraries, aiding greatly in the teaching of the social studies. One of the major weaknesses encount-

ered is the large number of poorly qualified teachers, some of whom have had very little training beyond high school.

Trade and Industrial Education

General Statement

For the past several years trade and industrial education in Louisiana has been seriously affected by the national emergency. Peak employment, war production training, the increasing inability to replace instructors who have entered the armed forces or have left the field of vocational education for employment in industry, and other factors have been the major contributing causes. The part-time program, both day trade and trade extension, and the industrial shop program conducted in the high schools have been the most seriously affected phases of the vocational programs. Lowering of standards of employment due to the manpower shortage, comparatively high wages paid to unskilled labor, and the long hours of overtime have taken a heavy toll of both prospective students and of instructors. For these reasons, expansion of the trade extension program has been slight; however, short unit courses and refresher courses have been well attended, due largely to co-operation of management and labor organizations, and reports from employers testify to the effectiveness and increasing need of this type of training.

We expect to increase our offerings in the trade schools in the coming year and to expand existing programs. New types of equipment will be installed where the need is indicated, and every effort will be made to institute new courses and to keep training abreast of the times and in line with new procedures and fields of endeavor. Special emphasis will be placed on safety. The itinerant automobile clinics will be in full operation. As soon as transportation difficulties are overcome, we plan to have the trade schools operate on an area school basis, thus serving a much larger territory than is now possible.

Two new trade schools were added to the regular program. Both are in heavily industrialized areas and enroll-

ment has been very satisfactory. Several classes for the petroleum industries, including industrial record filing; classes in rice mill maintenance, electronics, and radio control were added to curriculums, and others are being organized and instituted as the need develops. Sewage disposal training was added to the regular itinerant water purification program as well as REA training. Details necessary to the institution of the automobile clinics were completed and great interest has been expressed in this phase of the program.

There is increasing need for training in the fields of barbering, electronics, refrigeration and air conditioning, advanced radio, and various phases of the aircraft trades, and facilities for teaching of these subjects are being added to trade school curriculums. The Department of Commerce and Industry has plans under way for greater industrialization of the state, and this will automatically require expansion of both the day trade and evening programs. Training for practical nurses is greatly needed and we expect to inaugurate such training in the coming year. Management, as well as students, have expressed great appreciation for the assistance rendered in increasing the efficiency of workers through extension and refresher courses, and of management through foreman training classes and conference. The results of these classes have been the promotion in rating and/or pay of a number of persons, and a better understanding in general between the groups. This has in turn increased production and the quality of work through closer co-operation.

Labor and management organizations have co-operated by assisting in maintaining enrollments, obtaining competent instructors, and in publicizing classes. In the apprenticeship classes they have worked together to evaluate content of courses, establish standards, maintain enrollment, and recommend instructors.

State Supervisory Staff

Two assistant supervisors were appointed during the year; one to act in the capacity of teacher trainer and consultant and the other to be in charge of veterans' training.

Safety was stressed throughout the year at all of the state trade schools and monthly safety meetings held. Emphasis has been placed upon instruction of teachers and upon assembly of a complete reference library of instructional material and visual aids. All course outlines are being revamped to incorporate new ideas and practices. Special attention has been given to the organization of a program of education for veterans and approval of institutions for training of veterans.

All directors and others of the supervisory staff have addressed civic bodies, met with groups representing labor and management, advertised through newspaper publicity and ads and distribution of trade school bulletins, and have conferred with school authorities to promote co-operation in interesting students and ironing out transportation difficulties. The automotive industry has been most helpful in assisting to advertise the itinerant auto clinics by notices in automotive supply company folders, window placards, and newspaper publicity. Composite trade school bulletins were mailed to army and navy hospital libraries, separation centers, and guidance counselors for members of the armed services.

Schools and classes have been inspected regularly and meetings held from time to time to discuss supervisory problems and matters of policy.

Regular work conferences have been conducted and teachers aided in the proper methods of instructing and maintaining interest. Through the efforts of the staff, a large amount of instructional supplies, particularly for the aircraft trades, was donated to the trade schools throughout the state by manufacturing concerns.

A conference with the Office of Defense Transportation was held in New Orleans for two days. The need was stressed for the establishment of specialized training for automobile mechanics. Similar conferences were held in Alexandria and Shreveport. Details necessary to the institution of such classes, such as publicity, a meeting place,

types of training needed, and areas to be serviced were completed.

A regional meeting of Trade and Industrial Educational was held in New Orleans for one week. Postwar problems were discussed and it was agreed that a great deal of re-conversion training was necessary, which would result in a larger and better correlated program of trade and industrial education as a whole.

There was a conference of Southern Region REA co-operatives in New Orleans for three days. It was agreed that the need for this type of training was very great and of inestimable benefit. Methods and problems, and particularly the need for safety among crews, were discussed at length.

A conference of commercial teachers from the state trades schools was held at Crowley for one week. Instruction and course outlines were discussed. It was decided that course outlines should be standardized, that a complete library is essential, and that the courses should be so set up that they would meet all requirements for training of returning veterans.

There was a conference of trade school directors in the state office for two days to discuss the matter of preparing a composite trade school bulletin and more closely correlating the work of the trade schools with the high schools. It was generally agreed that the co-operation of the high-school principals was necessary to the success of the program in the state and that the discrepancy in units of credit given for vocational shop and industrial arts should be adjusted.

Two conferences with the War Manpower Commission were held for two days each. Methods of handling personnel problems were discussed. It was decided that conference leader and foreman training should be stressed in several areas.

A conference for white teachers was held for one week and intensive training in Job Instructor, Job Management, and Job Relations Training was given. Teaching content and procedure were discussed, as well as safety and qualifica-

tions of teachers. It was concluded that teachers should not remain out of industry for more than two years without taking refresher courses or taking industrial positions during the summer months; that procedures should be standardized; that safety should be more diligently followed; and that each school should have a definite safety organization.

The Southern Regional Conference for Negro Teacher Trainers and Assistant State Supervisors held in Nashville, Tennessee, April 16-20, was attended by the state's only Negro teacher trainer. Problems of Negro teachers in Southern States and post-war problems in Negro education were discussed. It was agreed that there must be effective training of teachers, co-operation between school authorities and training institutions, and more rigid supervision of classes and course contents.

The annual State Conference and Workshop for Negro Teachers was held in Shreveport June 11-28 to discuss post-war problems and the future of the vocational program for Negroes in general. It was brought out that there is a great need for an expanded program and a definite organization of Trade and Industrial Negro teachers in the state, and that a yearly two weeks' workshop was essential to keep the teachers' instructional methods efficient.

The first composite bulletin of State Trade Schools in Louisiana was published.

In co-operation with the State Department of Labor, Louisiana State Apprenticeship Council, which published a bulletin on "Apprenticeship Standards and Procedures for Local Apprenticeship Committees," the Trade and Industrial Division published Bulletin No. 541, "A Co-Operative Plan for Apprentice Training."

An investigation was conducted in each of the trade school areas to determine the approximate number of prospective students and their educational status, reasons for discontinuing formal education, types of training needed, and locations where new trade schools might be most effective. Each trade school director was responsible for assem-

meet requirements for reimbursement from federal funds or have not as yet sufficient enrollment to be included on our statistical report.

Foreman conferences not reported in the statistical report were conducted by the supervisor for the War Manpower Commission personnel in New Orleans and Baton Rouge for 20 hours each.

A Conference Leader Training Class conducted in New Orleans for 40 hours for the Department of Health was so enthusiastically received that a similar one was held for the nurses' group in Baton Rouge at a later date, and for the Health Department at Southwestern Louisiana Institute in Lafayette.

The regular program of water purification instruction was carried on throughout the state. New operators were trained in plant operation; and experienced men were upgraded to prepare them to obtain a higher class certificate. Teaching was accomplished by conferences, class work, lectures, booklets, motion pictures, experiments, equipment tests, field demonstrations, and construction of a scaled working model. Sewage disposal was added to the program, laboratory tests and plant upkeep being the most frequently covered subjects. The instructor of this class has written a *Manual For Water Plant Operators*, incorporating significant advances in water plant operation, and this manual will no doubt be off the press at an early date.

An instructor for the REA program was secured this session, and job and safety instruction were given at all co-operatives. Training was on an individual basis, and the instructor traveled with the respective crews to offer suggestions and criticisms. Managers of the various co-operatives have been instructed in and informed of violations of safety rules and of state laws with regard to operation of trucks and equipment. It is apparent that there is great need for this training, and it is felt that it will be of inestimable benefit to all concerned.

Vocational Agriculture

The primary objective of instruction in agriculture is to establish young men in farming. It is also its purpose to train farmers already established in farming to become more proficient. The success of instruction in vocational agriculture is measured by the number of individuals who have been or will be established in farming, and who are making advancement in their occupation through systematic instruction in vocational agriculture in all-day, part-time, or adult classes.

In recognition of this principle, those who enroll in vocational agriculture classes study, early in their training program, the problems and difficulties as well as the advantages of becoming established in farming, in order that they may choose wisely whether they should pursue training in this field. In order that they may have this information, patterns of establishment by size and types of farms in the local community are used in connection with the discussions on establishment. Also, data are analyzed showing the equipment, livestock, seed, fertilizer, buildings, operating capital, and land required for the successful operation of different types and sizes of farms.

Throughout the training program, emphasis is placed on the accumulation of livestock, equipment, and other assets essential to successful farming.

The teachers of vocational agriculture serve as advisers to local chapters of Future Farmers of America. In the development of national unity, the Future Farmers of America, consisting of youth studying vocational agriculture throughout America, are making and will continue to make a significant contribution. For two decades this nation-wide youth movement under the guidance of teachers of agriculture has equipped its members to deal with the practical problems of production, co-operation, citizenship, morale, and character building. The F. F. A. has developed competent, aggressive leadership and has created and nurtured a love of country life. It has strengthened the confidence of farm youth in themselves and in their work and in the im-

provement of the farm home and its surroundings. It has encouraged the practice of thrift, improvement in scholarship, and wholesome recreational activities.

The teacher situation in vocational agriculture has been seriously impaired. Many teachers have left the work during the war period, a majority of these entering the armed service. The source of supply of new teachers has been practically eliminated because of the war emergency. Many departments have been closed temporarily due to the lack of competent teachers. There is a potential backlog of need for hundreds of new teachers in Louisiana in the post-war period.

Teacher-training programs in the future must be geared to equip the teacher technically and professionally in problems of farm production, credit, financing, co-operation in marketing, farm mechanization and the care, operation, and repair of farm machinery, the organization and direction of many special agricultural education services, and the training of farm workers.

The rural people take justifiable pride in the expanding services of the modern high school. This step-up in the variety of these services is the outgrowth of community interest and initiative to provide better educational facilities for youth and adults. These expanded services are designed to supplement the facilities already available in the schools. It is evident that proper planning is needed in establishing these expanded services. In the use of such facilities, the primary purpose should be that of training and not of service. It is necessary, therefore, to provide adequate equipment and facilities if we are to provide practical worthwhile programs in keeping with the local needs.

A sound program in agricultural education should originate and be built around the needs of the local community. The local people are best fitted to determine their needs and the services they desire for the education of their youth and adults. The program in the past has been successful because it has been sufficiently flexible to meet such needs. This principle is fundamental to future developments.

Vocational Rehabilitation

The occupational adjustment of any individual must be based on a thorough study of that person's capacities and limitations evaluated in terms of employment opportunities. The rehabilitation process, therefore, consists of the collection and evaluation of information about the client's education, intelligence, interests, abilities, aptitudes, work experiences, economic and social level, physical condition, and any other factors affecting employability. On this basis, a plan is developed for each individual, setting forth in detail the services to be rendered, necessary to his preparation for employment. Services provided may include one or more of the following: medical examinations, psychiatric examination, case study, guidance and planning, training, training supplies and equipment, maintenance, transportation, occupational tools and licenses, placement, and follow-up in employment.

Medical and psychiatric examinations, case studies, guidance and planning, and training costs are supplied to any eligible and feasible person; however, all other services are conditioned by the financial need of the applicant.

The adjustment of any disabled person is socially important to the state and community in which he lives. Economically, rehabilitation is sound since, in the final analysis, the earning capacities of those clients whose cases have been completed far exceed the costs of their rehabilitation. In the fiscal year 1944-45, more than 1500 cases were closed as rehabilitated. The total income from this group is in excess of \$50,000 per week, whereas the total cost of the operation of the program for the year was only \$150,000. In one year these clients of rehabilitation, satisfactorily adjusted to employment situations, earn approximately 17 times the cost of the program for that year.

WAR PRODUCTION TRAINING PROGRAM

Food Production War Training

The primary purpose of Food Production War Training was training to help increase wartime food production. This program served as a vehicle for vocational agriculture to make an additional contribution to the war effort. Early in the war, the program was designed to furnish training for youth, and especially rural youth, which the original war training program could not reach. Later, this program was extended to adults and redesigned to assist in the production of food for the war effort.

The food goals were set up, each year, by the Secretary of Agriculture. There were some 23 different courses which could be offered under this program. They were designed to contribute, in some measure, to reaching food goals for the nation. The largest enrollments were in Course 5, "Operation, care, and repair of farm machinery and equipment" and Course 15, "Production, conservation, and processing of food for family use." There was also considerable emphasis in the series of commodity courses. In operating this program, the teacher of vocational agriculture, in addition to his regular duties, had to become the local supervisor of Food Production War Training. Most teachers of vocational agriculture had no training or experience in supervising other teachers. This necessitated giving attention to this problem confronting vocational agriculture teachers. Special clinics and workshops were conducted by members of the supervisory staff in order to assist the teachers in planning and conducting their supervisory activities. A large proportion of those employed to instruct these courses were special teachers who had not received professional training. These persons were usually lacking in both technical and professional training. They were almost without exception occupationally successful. Inasmuch as local supervisors were not skilled in supervision or teacher training, the profes-

sional up-grading was limited in scope and was a weak spot in many programs. Since there has been such an interest displayed in Courses 5 and 15, it is probable that enrollees have received substantial educational benefits from these areas of instruction. It is probable that some persons who enrolled were interested in service primarily and instruction secondary. It is necessary, therefore, that local school leaders continue to emphasize the needs for further development of educational phases of such courses, for example: What skills and abilities do farmers need in order to adjust and repair their machinery? What are the common jobs farmers of a community should do in order to adjust and repair their machinery? What skills and abilities are needed to conserve food?

Local school leaders should analyze these fields and, around these analyses, develop their instructional programs. They should also analyze the abilities and skills necessary to production of essential food products. The instruction in such courses should be planned so that it would be given most effectively.

Enrollees in this program varied widely as to age, educational status, and many other characteristics.

The future development of this program will depend in part for its success upon a closer working relationship between school administrators and vocational teachers. There are important implications for vocational agriculture, and some of the developments of the Food Production War Training Program should be continued in the vocational agriculture program. Probably three-fourths of the farmers enrolled in Course 5 had never attended a part-time or adult class. This large group should become a new clientele for vocational agriculture and should expand enrollments in adult courses.

This program has made a signal advance in public relations and improved working relationships with other organizations, programs, and agencies dealing with farm people. Farm organizations, civic organizations, and educational organizations now recognize the value of adult education

through experience gained with Food Production War Training.

Many teachers, because they have taken an active part in the local program of Food Production War Training, have gained a new viewpoint of vocational education, especially in its adult phases. Their fine support of Food Production War Training can be expected to survive the war and intensify their interest in vocational agriculture. Future teachers of agriculture must be taught to perform many functions developed under this program. Louisiana has had the third largest program in the nation. Since 1941, thousands of people have been trained. There is a demand for this type of training. It is practical and reaches into the lives of many people not reached through the regular school program.

¹ On 1943 and previous assessments.

² On 1944 assessment.

³ One and one-half mills of 3-mill constitutional tax are dedicated to redemption of certificates of indebtedness.

⁴ Two mills of 3-mill constitutional tax are dedicated to redemption of certificates of indebtedness.

⁵ Orleans levies a parish constitutional tax of 7 mills.

⁶ No taxes were reported for 1943-44 because of court litigation. The deferred collections report release of the 1943-44 funds.

¹ On 1943 and previous assessments.² On 1944 assessment.³ Non-revenue receipts result from incurring debt or the depletion of school property. They are not derived from taxes and do not increase revenues.⁴ Loans from banks do not increase the income for the schools. They are temporary loans that must be repaid within the fiscal year.
